Attn : Mr. Ho-Seok Gwak, QA Manager

Date of Issue : August 30, 2004
Test Report S/N : GETEC-E3-03-040
Test Site : Gumi College EMC Center

FCC ID.

RCDXM7040

APPLICANT

DONGYANG Electronics Co., Ltd.

Rule Part(s) : FCC Part 15 Subpart C
Equipment Class : Lower Power Communication Device Transmitter (DXX)
EUT Type : FM Transmitter (built in LCD Display)
Model No. : XM-7040CB

This equipment has been shown to be in compliance with the applicable technical standards as indicated in the measurement report and was tested in accordance with the measurement procedures specified in ANSI C63.4-1992.

I attest to the accuracy of data. All measurements reported herein were performed by me or were made under my supervision and are correct to the vest of my knowledge and belief. I assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

2. Introduction

The measurement procedure described in American National Standard for Methods of Measurement of Radio-Nose Emissions From Low-Voltage Electrical and Electronic Equipment in the Range of 9kHz to 40GHz (ASNI C63.4-1992) was used in determining radiated and conducted emissions emanating from **DONGYANG Electronics Co., Ltd. FM Transmitter (Built in LCD display), FCC ID.: RCDXM7040**

These measurement tests were conducted at **Gumi College EMC Center**.

The site address is 407, Bugok-Dong, Gumi-City, Gyeongsangbuk-Do, Korea

This test site is one of the highest point of Gumi 1 college at about 200 kilometers away from Seoul city and 40 kilometers away from Daegu city. It is located in the valley surrounded by mountains in all directions where ambient radio signal conditions are quiet and a favorable area to measure the radio frequency interference on open field test site for the computing and ISM devices manufactures. The detailed description of the measurement facility was found to be in compliance with the requirements of §2.948 according to ANSI C63.4 on October 19, 1992

3. Test Conditions & EUT Information

3.1 Description of EUT

The Equipment Under Test (EUT) is the **DONGYANG Electronics Co., Ltd. FM Transmitter (Built in LCD display), FCC ID.: RCDXM7040**

It can transmit audio signal of AV equipments (DVD or TV) to FM Radio receiver in a car.

This EUT include AV equipments is utilized in a car exclusively.

3.3 Cable(s)

The EUT was tested with following cables

| | | |
|--------------------------|-------|--|
| DC Power cable | 2.5 m | Connected to the DC power supply |
| AV input cable | 1.5m | Connected to the EUT and DVD Player |
| AV output cable | 1.5m | Open |
| Coaxial ANT cable | 10.0m | Connected to the EUT and TV signal generator |

4. Description of tests

4.1 Radiated Emission

Preliminary measurements were conducted 3m semi anechoic chamber using broadband antennas to determine the frequency producing the maximum EME. Appropriate precaution was taken to ensure that all EME from the EUT were maximized and investigated. The technology configuration, mode of operation and turntable azimuth with respect to antenna was note for each frequency found.

The spectrum was scanned from 30 to 1000MHz using biconical log antenna (Schwarzbeck, VULB9160).

Final measurements were made outdoors at 3 m-test range using biconical antenna (R&S, HK116) and log-periodic antenna (R&S, HL223).

Sufficient time for the EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition.

Each frequency found during pre-scan measurements was re-examined and investigated using EMI test receiver. (ESCS30)

The detector function was set to Average mode and CISPR quasi-peak mode, the bandwidth of the receiver was set to 120KHz.

The EUT, support equipment and interconnecting cables were reconfigured to the setup producing the maximum emission for the frequency and were placed on top of a 0.8m high non-metallic 1.0×1.5 meter table.

The turntable containing the test sample was rotated; the antenna height was varied 1 to 4 meter and stopped at the azimuth or height producing the maximum emission. Each EME reported was calibrated using the R/S signal generator

4.2 Conducted Emission

This equipment is supplied DC power from the car battery. Therefore, no conducted limits apply for this equipment.

5. Radiated emission test

5.1 Operating environment

Temperature : 27°C
Relative humidity : 54 %

5.2 Test set-up

A preliminary scan with peak mode was performed in the semi anechoic chamber using the procedure in ANSI C63.4/1992 13.1.4.1 and found frequency for open area test site.

The formal radiated emission was measured at 3m-distance open area test site.

The EUT was placed on a non-conductive turntable approximately 0.8 meters above the ground plane.

The turntable with EUT was rotated 360°, and the antenna was varied in height between 1.0 and 4.0 meters in order to determine the maximum emission levels.

This procedure was performed for both horizontal and vertical polarization of the receiving antenna.

5.3 Measurement uncertainty

The measurement uncertainty was calculated in accordance with ISO “Guide to the expression of uncertainty in measurement”.

The measurement uncertainty was given with a confidence of 95%.

6. Occupied Bandwidth Measurement

6.1 Operating environment

Temperature : 25 °C
Relative humidity : 64 %

6.2 Test set-up

This measurement is performed with the antenna located close enough to give a full-scale deflection of the modulated carrier on the spectrum analyzer. The plot is taken at 20kHz/division frequency span, 30kHz resolution bandwidth and 5dB/division logarithmic display from an ESPI EMI Test Receiver.

6.3 Limit

- - Within 200kHz wide centered on the operating frequency
- - The 200kHz band shall lie wholly within the frequency range of 88-108MHz

6.4 Test equipment used

6.5 Test result of occupied bandwidth

- Test Date : August 27, 2004
 - Reference standard : Part 15 Subpart C, Sec. 15.239(a)
 - Operating condition : Transmit audio signal of TV mode
 - Spectrum resolution bandwidth(6dB) : 30 kHz
 - Power Source : DC 12V

■ RESULT : Passed

Refer to APPENDIX B: Test Plots of occupied bandwidth

Remark : Measurements were performed 1 near top and 1 near bottom location in the frequency range operation according to ANSI C63.4/1992. Sec. 13.1.1

7. Recommendation & conclusion

The data collected shows that the Gumi College EMC Center.

DONGYANG Electronics Co., Ltd. FM Transmitter (Built in LCD Display) Model No.: XM-7040CB was complies with §15.239 of the FCC Rules.
