Attn: Director of Certification

**Family Certification Request**

**Authority to Act as Agent**

In accordance with Industry Canada RSP-100 Section 5.2.1, the following 2 modules are being submitted for "New Family Certification":

Model Numbers: 11-115-0000 & 11-115-0001

IC Certification Number: IC: 10823A-SEYWAVE

As per the requirements of RSP-100, the 2 models are electrically identical. Model 11-115-0000 will be sold with the chip antenna. Model 11-115-0001 will be sold with the external antenna. They will use the same PCB (circuit board). All TX and RX circuits (and all non-RF circuits) are identical. This includes amplifier gain settings, attenuation settings, etc. The associated firmware is the same. The differences between the 2 models is a U.FL (IPX) connector for the external antenna. Both antennas were tested for this certification.

I certify that the exhibits provided properly describe the devices being submitted for this certification.

Sincerely,

Ronald F. Seyk  
President

A handwritten signature in blue ink that reads "Ron Seyk". The signature is written in a cursive, flowing style.
