

Report No. : BLA-EMC-201908-A26-01

FCC Report (Bluetooth)

Product Name	:	Bluetooth headset
Trade mark	:	N/A
Model No.	:	In1931
FCC ID	:	RDR-IN1931
Report Number	:	BLA-EMC-201908-A26-01
Date of sample receipt	:	August 8, 2019
Date of Test	:	August 8, 2019–August 20, 2019
Date of Issue	:	August 24, 2019
Test standard	:	FCC CFR Title 47 Part 15 Subpart C Section
		15.247
Test result	:	PASS

Prepared for:

4 Test Summary

Test Item	Section in CFR 47	Result
Antenna Requirement	15.203/15.247 (c)	Pass
AC Power Line Conducted Emission	15.207	Pass
Conducted Peak Output Power	15.247 (b)(1)	Pass
20dB Occupied Bandwidth	15.247 (a)(1)	Pass
Carrier Frequencies Separation	15.247 (a)(1)	Pass
Hopping Channel Number	15.247 (a)(1)	Pass
Dwell Time	15.247 (a)(1)	Pass
Pseudorandom Frequency Hopping Sequence	15.247(b)(4)	Pass
Radiated Emission	15.205/15.209	Pass
Band Edge	15.247(d)	Pass

Pass: The EUT complies with the essential requirements in the standard.

Remark: Test according ANSI C63.10:2013

Measurement Uncertainty

Test Item	Frequency Range	Measurement Uncertainty	Notes
Radiated Emission	9kHz ~ 30MHz	± 4.34dB	(1)
Radiated Emission	30MHz ~ 1000MHz	± 4.24dB	(1)
Radiated Emission	1GHz ~ 26.5GHz	± 4.68dB	(1)
AC Power Line Conducted Emission	0.15MHz ~ 30MHz	± 3.45dB	(1)

Note (1): The measurement uncertainty is for coverage factor of k=2 and a level of confidence of 95%.

5.2 Test mode

Transmitting mode	Keep the EUT in continuously transmitting mode.
Remark: Full battery is us	ed during all test except ac conducted emission, DH1, DH3, DH5 all have been

tested, only worse case is reported.

5.3 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

• FCC — Designation No.: CN1252

Qianhai BlueAsia of Technical Services(Shenzhen) Co., Ltd has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in files. Designation CN1252.

•ISED — CAB identifier No.: CN0028

Qianhai BlueAsia of Technical Services(Shenzhen) Co., Ltd has been registered by Certification and Engineering Bureau of ISED for radio equipment testing with CAB identifier CN0028

5.4 Test Location

All tests were performed at:

All tests were performed at:

Qianhai BlueAsia of Technical Services(Shenzhen) Co., Ltd.

IOT Test Centre of BlueAsia

No. 448 Bulong Road, Bantian Street, Longgang District, Shenzhen, China

Telephone: TEL: +86-755-28682673 FAX: +86-755-28682673

No tests were sub-contracted.

5.5 Other Information Requested by the Customer

None.

5.6 Description of Support Units

7 Test results and Measurement Data

7.1 Antenna requirement

Standard requirement:	FCC Part15 C Section 15.203 /247(c)
-----------------------	-------------------------------------

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

15.247(c) (1)(i) requirement:

(i) Systems operating in the 2400-2483.5 MHz band that is used exclusively for fixed. Point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi provided the maximum conducted output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6dBi.

E.U.T Antenna:

The antenna is Chip antenna, the best case gain of the antenna is 1.2dBi

7.2 Conducted Emissions

Т	est Requirement:	FCC Part15 C Section 15.207					
Т	est Method:	ANSI C63.10:2013					
Т	est Frequency Range:	150KHz to 30MHz					
C	Class / Severity:	Class B					
R	Receiver setup:	RBW=9KHz, VBW=30KHz, Sweep time=auto					
L	.imit:		Limit (dBuV)				
		Frequency range (MHz)	Quasi-peak Average				
		0.15-0.5	66 to 56* 56 to 46*				
		0.5-5	56 46				
		5-30	60 50				
		* Decreases with the logarithm	n of the frequency.				
Т	est setup:	Reference Plane					
		AUX Filter AC power Equipment E.U.T Filter AC power Test table/Insulation plane EMI Receiver Remark: E.U.T. Equipment Under Test LISN: Line Impedence Stabilization Network Test table height=0.8m Retwork					
Т	est procedure:	 The E.U.T and simulators are connected to the main power through a line impedance stabilization network (L.I.S.N.). This provides a 50ohm/50uH coupling impedance for the measuring equipment. The peripheral devices are also connected to the main power through a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination. (Please refer to the block diagram of the test setup and photographs). Both sides of A.C. line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10:2013 on conducted measurement. 					
Т	est Instruments:	Refer to section 6.0 for details					
Т	est mode:	Refer to section 5.2 for details					
Т	est results:	Pass

7.8 Pseudorandom Frequency Hopping Sequence

Test Requirement:	FCC Part15 C Section 15.247 (a)(1) requirement:							
	s shall have hopping channel carrier frequencies separated by a minimun idth of the hopping channel, whichever is greater.							
Alternatively. Frequency hopping systems operating in the 2400-2483.5 MHz band may have hopping channel carrier frequencies that are separated by 25 kHz or two-thirds of the 20 dB bandwidth of the hopping channel, whichever is greater, provided the systems operate with an output power no greater than 125 mW. The system shall hop to channel frequencies that are selected at the system hopping rate								
								red list of hopping frequencies. Each frequency must be used equally on
								r. The system receivers shall have input bandwidths that match the hopp
	corresponding transmitters and shall shift frequencies in synchronization							
the transmitted signals.								
5	ueneu llemning Convenee							
EUT Pseudorandom Frequ								
	ce may be generated in a nine-stage shift register whose 5th and 9th sta							
	ulo-two addition stage. And the result is fed back to the input of the first							
	s with the first ONE of 9 consecutive ONEs; i.e. the shift register is initializ							
with nine ones.								
Number of shift register sta	ages: 9

7.9 Band Edge

7.9.1 Conducted Emission Method

FCC Part15 C Section 15.247 (d)				
ANSI C63.10:2013				
RBW=100kHz, VBW=300kHz, Detector=Peak				
In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement.				
Spectrum Analyzer E.U.T Non-Conducted Table Ground Reference Plane				
Refer to section 6.0 for details				
Refer to section 5.2 for details				
Pass

7.9.2 Radiated Emission Method

7.9.2 Radiated Emission M							
Test Requirement:	FCC Part15 C Section 15.209 and 15.205						
Test Method:	ANSI C63.10:2013						
Test Frequency Range:	All restriction band have been tested, and 2310MHz to 2390MHz, 2483.5MHz to 2500MHz band is the worse case						
Test site:	Measurement Distance: 3m						
Receiver setup:	Frequency	Detector	RBW	VBW	Remark		
	Above 1GHz	Peak	1MHz	3MHz	Peak Value		
		Peak	1MHz	10Hz	Average Value		
Limit:	Frequency Above 1GHz		Limit (dBuV/m @3n 54.00		Remark Average Value		
			74.0		Peak Value		
Test setup:							
	Tum Tables and a state of the s		Test Antenna < 1m 4m > Receiver- Pr	*			
Test Procedure:	 The EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter camber. The table was rotated 360 degrees to determine the position of the highest radiation. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rota table was turned from 0 degrees to 360 degrees to find the maximum reading. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10df margin would be re-tested one by one using peak, quasi-peak or 						
Test Instruments:	Refer to section	6.0 for details	6				
Test mode:	Refer to section 5.2 for details						
Test results:	Pass

Measurement data:

Remark:

- 1. During the test, pre-scan the GFSK, Pi/4QPSK, 8-DPSK modulation, and found the 8-DPSK modulation which it is worse case.
- 2. Pre-scan all kind of the place mode (X-axis, Y-axis, Z-axis), and found the Y-axis which it is worse case.

■ 9 kHz ~ 30 MHz

The low frequency, which started from 9 kHz to 30 MHz, was pre-scanned and the result which was 20 dB lower than the limit line per 15.31(o) was not reported.

12400.00	*			74.00		Horizontal
14880.00	*			74.00		Horizontal

Remark:

- 1. Final Level =Receiver Read level + Correct factor
- 2. Correct factor = Antenna Factor + Cable Loss Preamplifier Factor
- 3. "*", means this data is the too weak instrument of signal is unable to test.
- 4. The emission levels of other frequencies are very lower than the limit and not show in test report.
- 5. As shown in this section, for frequencies above 1GHz, the field strength limits are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation. So, only the peak measurements were shown in the report.
