Sub: Letter Exhibit regarding Professional installers towards DFS certification on 7000 Series Mesh Routers, 5000 Series Access Point and FWB-205 Wireless Bridges

Professional installers of Firetide equipment are required to attend Firetide certification training for the products that they will be installing. The certification process includes a written examination which must be completed with a passing grade to confirm that the professional installer understands the technical and regulatory requirements for proper installation of Firetide products, as well as compliance with FCC Part 15 regulations. Since it is presumed that FCC Part 15, subpart E will be updated to include the requirements of KDB443999, Firetide is proactively updating its certification training curriculum to cover compliance with the DFS requirements as currently defined in KDB443999.
