

Operational Description

Remote Controller Drift X170

The Equipment Under Test (EUT) is a manually activated transmitter operated at 433.9 MHz to control the receiver (camera) for capturing the action color video and audio.

The EUT has two buttons which are for “Record” and “Stop” function.

Once a button is pressed the EUT transmits pulsed signals for less than one second, then it will automatically stop the transmission no matter the user continuously presses the button.
