RF exposure requirements - FCC ID: RFFCPD0401

Dear Application Examiner,

The maximum measured power output is 1,86 mW (2,7 dBm), the maximum antenna gain is 4 dBi = numeric gain 2,51 (see also FCC test report - Exhibit B)

The maximum permissable exposure is defined in 47 CFR 1.1310 with 1 mW/cm². The distance from the EUT's transmitting antenna where the exposure level reaches the maximum permitted level is calculated using the general equation:

$$S = P*G / 4\pi R^2$$

 $S_{max} = 1 \text{mW/cm}^2$, P = 1.86 mW, linear power gain relative to the isotropic radiator = 4 dBi = 2.51 (numeric gain), R = distance in cm

Solving for R, the 1mW/cm² limit is reached in a distance of 0,61 cm to the transmitting antenna.

Please contact us if you have any additional questions.

Best Regards
