Subject: Response to question regarding power reduction for band edge compliance.

FCC ID: RFM-MWS100NA

Gentlemen,

In the MiCom test report STRX16-A4 Rev A, power was reduced, through the test software, to achieve band edge compliance. When this is required, the lowest power for all antenna types is used as the basis of our maximum transmitted power for any given channel. The channel power tables in our software, allow Strix Systems, Inc. to define the maximum power by channel and modulation. These tables are not modifiable by the end consumer. In this manner, we can ensure that the product as delivered to a customer adheres to the power by channel requirements that allowed our product to gain certification.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Alex Berg', with a stylized flourish at the end.

Alex Berg
VP of Engineering
Strix Systems, Inc.
