A Division of GNA Industries

October 17, 2003

FCC

Subject: Confidentiality

We hereby request that technical information on our battery powered irrigation controller models: "Smart Alex Controller" and "The Smart One programmer" that have been recently assigned the FCC identifications RHISACONT and RHISAPROG be held confidential. This information consists of the controller and programmer schematics, block diagrams, and operational descriptions. This request is made pursuant to 47 CFR 0.457(d) of the FCC rules for the following reason:

A small manufacturer's sole advantage is to bring innovative products to market as expeditiously as possible and obtain market share before a larger competitor copies it. Permitting technical information to be easily accessible to others would severely damage our ability to establish initial market share. By facilitating competitors to copy this design without incurring the considerable design and development expense (and time) incurred by the original innovator would give the competitor an unfair advantage.

Sincerely,

George Alexanian
President
