Subject: Test of Control Panel type PowermaxPRO with GSM Modem

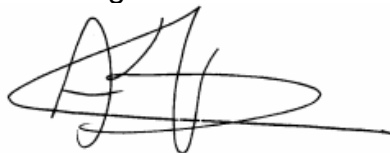

Dear Sirs

This is to confirm that the PowermaxPRO has an internal bought out GSM modem type **GE863 QUAD**, manufactured by **TELIT**

The communication tests with this modem were done with a base station simulator **which prompted the modem for maximum power emissions.**

This modem does not have external/other controls of communication power of this modem, which as mentioned previously is a standard bought out component used without any modification.

Best Regards

Arick Elshtein
