RF exposure analysis for the equipment ZE51-2.4 (FCC ID: R17ZE51)

The device ZE51-2.4 is designed to be used only in mobile exposure conditions (antenna to user distance higher than 20 cm).

The antenna(s) used for these transmitters must be installed to provide a separation distance of at least 20 cm from all the persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

The output power of the device is extremely low (97.38 dB μ V/m @ 3 m, equivalent to 5.1 mW) and far below the $60/f(\text{GHz})$ mW ($60/2.45$ mW = 24.48 mW) threshold. For that reason the equipment is categorically excluded from routine environmental evaluation for RF exposure and it is deemed to comply with FCC limits for exposure to electromagnetic fields.
