January 7, 2008

RE: Electronics Line 3000 Ltd.

FCC ID: RIYEL2606

After a review of the submitted information, I have a few comments on the above referenced Application. Depending on your responses, kindly understand there may be additional comments.

- 1) One labeling exhibit appears to have 2 different ID numbers. Another labeling exhibit does not have sufficient resolution to read the label. Please review as information should only support the device being certified and be of sufficient resolution.
- 2) Schematic of the RF board itself does not appear to be provided. Please provide.
- 3) According to the users manual, when the device is powered up, it continues in a tamper mode for about 5 minutes where it transmits every few seconds. This may violate 15.231 requirements. Even professionally installed devices have a 10 second limitation per event (i.e. button push / automatic start up, etc.). Note test data suggests < 5 seconds. Please review.
- 4) For spurious emissions, the tables suggest there was not data. However plots are given and some data should be shown in effort to show this data is compliant.

Timothy R. Johnson  
Examining Engineer

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
