

# **FCC Test Report**

# (PART 24)

Report No.: RF161215C20-2

FCC ID: RLS-STAVL1520

Test Model: P2-3G

Received Date: Dec. 15, 2016

Test Date: Jan. 14, 2017 ~ Jan. 20, 2017

**Issued Date:** Feb. 03, 2017

Applicant: SYSTEMS & TECHNOLOGY CORP.

Address: 18F-5, No.79, Hsin Tai Wu Road, Sec. 1, Hsichih, New Taipei City, Taiwan,

R.O.C.

Issued By: Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch

Lab Address: No. 47-2, 14th Ling, Chia Pau Vil., Lin Kou Dist., New Taipei City, Taiwan

(R.O.C)

Test Location: No. 19, Hwa Ya 2nd Rd, Wen Hwa Tsuen, Kwei Shan Hsiang, Taoyuan

Hsien 333, Taiwan, R.O.C.

This report is for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. You have 60 days from date of issuance of this report to notify us of any material error or omission caused by our negligence, provided, nowever, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents. Unless specific mention, the uncertainty of measurement has been explicitly taken into account to declare the compliance or non-compliance to the specification. The report must not be used by the client to claim product certification, approval, or endorsement by TAF or any government agencies.

### 1 Certificate of Conformity

Product: Personal Tracker

Brand: CAREU

Test Model: P2-3G

Sample Status: Identical Prototype

Applicant: SYSTEMS & TECHNOLOGY CORP.

Test Date: Jan. 14, 2017 ~ Jan. 20, 2017

Standards: FCC Part 24, Subpart E

The above equipment has been tested by **Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch**, and found compliance with the requirement of the above standards. The test record, data evaluation & Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's EMC characteristics under the conditions specified in this report.

Prepared by : , Date: Feb. 03, 2017

Evonne Liu / Specialist

# 2 Summary of Test Results

| Applied Standard: FCC Part 24 & Part 2 |                                    |        |   |  |  |
|--|------------------------------------|--------|---|--|--|
| FCC<br>Clause                          | Test Item                          | Result | Remarks   |  |  |
| 2.1046<br>24.232                       | Effective Isotropic Radiated Power | Pass   | Meet the requirement of limit.  |  |  |
| 2.1046<br>24.232(d)                    | Peak to Average Ratio              | Pass   | Meet the requirement of limit.  |  |  |
| 2.1055<br>24.235                       | Frequency Stability                | Pass   | Meet the requirement of limit.  |  |  |
| 2.1049<br>24.238(b)                    | Occupied Bandwidth                 | Pass   | Meet the requirement of limit.  |  |  |
| 24.238(b)                              | Band Edge Measurements             | Pass   | Meet the requirement of limit.  |  |  |
| 2.1051<br>24.238                       | Conducted Spurious Emissions       | Pass   | Meet the requirement of limit.  |  |  |
| 2.1053<br>24.238                       | Radiated Spurious Emissions        | Pass   | Meet the requirement of limit. Minimum passing margin is -25.46 dB at 30 MHz. |  |  |

# 2.1 Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2:

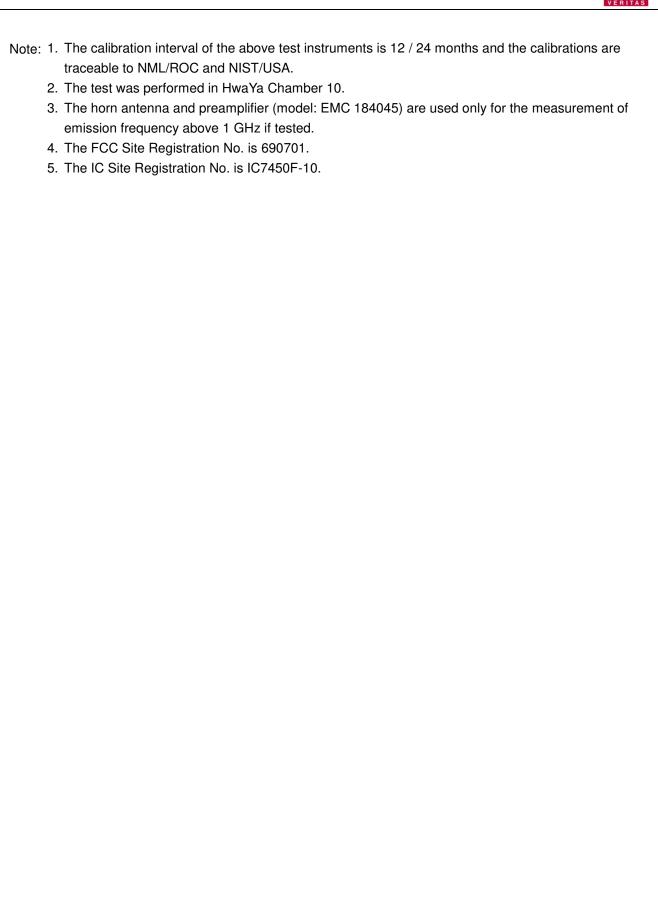

| Measurement                        | Frequency         | Expended Uncertainty (k=2) (±) |
|------------------------------------|-------------------|--------------------------------|
| Conducted Emissions at mains ports | 150 kHz ~ 30 MHz  | 2.44 dB                        |
| Dedicted Emissions up to 1 CUT     | 30 MHz ~ 200 MHz  | 2.93 dB                        |
| Radiated Emissions up to 1 GHz     | 200 MHz ~1000 MHz | 2.95 dB                        |
| Radiated Emissions above 1 GHz     | 1 GHz ~ 18 GHz    | 2.26 dB                        |
| nadiated Emissions above 1 GHz     | 18 GHz ~ 40 GHz   | 1.94 dB                        |

|                     | WCDMA  | 4M07F9W             |  |  |
| Antenna Type        | Fixed Internal Antenna                                       |                     |  |  |
| Accessory Device    | Refer to Note as below                                       |                     |  |  |
| Data Cable Supplied | Refer to Note as below                                       |                     |  |  |

#### Note:

1. The EUT contains following accessory devices.

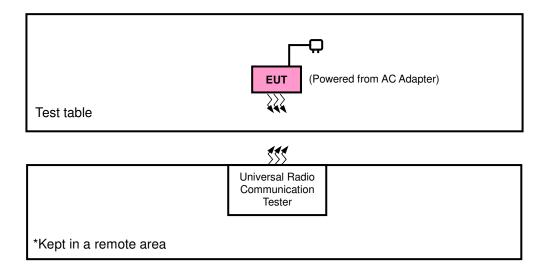

| Product   | Brand   | Model           | Description   |
|-----------|---------|-----------------|---|
| Adapter   | FSP     | FSP010-FPDN     | I/P: 100-240 Vac, 50-60 Hz, 0.25 A<br>O/P: 5 Vdc, 2 A |
| Battery   | HELIX   | HX-N3650-S2     | 3.7 Vdc, 770 mAh                                      |
| CPU       | ST      | STM32L151RD     | 64 PIN  |
| BT Module | CYPRESS | CYBLE-022001-00 |   |

2. The above EUT information is declared by manufacturer and for more detailed features description, please refer to the manufacturer's specifications or user's manual.

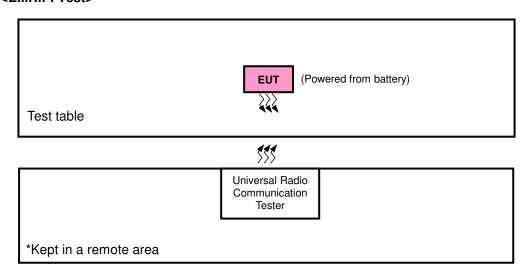

# 3.2 Configuration of System under Test

#### <Radiated Emission Test>

#### <E.I.R.P. Test>

# 3.2.1 Description of Support Units

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| No. | Product                                 | Brand | Model No. | Serial No. | FCC ID |
|-----|---|-------|-----------|------------|--------|
| 1.  | Universal Radio<br>Communication Tester | R&S   | CMU200    | 123295     | N/A    |

| No. | Signal Cable Description Of The Above Support Units |
|-----|---|
| 1.  | N/A   |

#### Note:

- 1. All power cords of the above support units are non-shielded (1.8m).
- 2. Items 1 acted as communication partners to transfer data.

# 3.3 Test Mode Applicability and Tested Channel Detail

Pre-Scan has been conducted to determine the worst-case mode from all possible combinations between available modulations, data rates, XYZ axis, and antenna ports.

The worst case was found when positioned as the table below. Following channel(s) was (were) selected for the final test as listed below:

| Band  | EIRP    | Radiated Emission |  |
|-------|---------|-------------------|--|
| GSM   | X-plane | X-axis            |  |

# 3.4 EUT Operating Conditions

The EUT makes a call to the communication simulator. The communication simulator station system controlled a EUT to export maximum output power under transmission mode and specific channel frequency

# 3.5 General Description of Applied Standards

The EUT is a RF Product. According to the specifications of the manufacturer, it must comply with the requirements of the following standards:

FCC 47 CFR Part 2 FCC 47 CFR Part 24 KDB 971168 D01 Power Meas License Digital Systems v02r02 ANSI/TIA/EIA-603-D 2010

**NOTE:** All test items have been performed and recorded as per the above standards.

# 4 Test Types and Results

## 4.1 Output Power Measurement

4.1.1 Limits of Output Power Measurement

Mobile / Portable station are limited to 2 watts e.i.r.p.

#### 4.1.2 Test Procedures

### **EIRP / ERP Measurement:**

- a. All measurements were done at low, middle and high operational frequency range. RBW and VBW is 1 MHz for GSM, GPRS & EDGE, 5 MHz for WCDMA and CDMA, and 10 MHz for LTE mode.
- b. Substitution method is used for E.I.R.P measurement. In the semi-anechoic chamber, EUT placed on the 0.8 m height of Turn Table, rotated the table around 360 degrees to search the maximum radiation power and receiver antenna shall be rotated vertical and horizontal polarization and moved height from 1m to 4m to find the maximum polar radiated power. The "Read Value" is the spectrum reading the maximum power value.
- c. The substitution horn antenna is substituted for EUT at the same position and signals generator export the CW signal to the substitution antenna via a tx cable. Rotated the Turn Table and moved receiving antenna to find the maximum radiation power. Adjust output power level of S.G to get a Value of spectrum reading equal to "Read Value" of step b. Record the power level of S.G.
- d. EIRP = Output power level of S.G TX cable loss + Antenna gain of substitution horn.E.R.P power can be calculated form E.I.R.P power by subtracting the gain of dipole, E.R.P power = E.I.P.R power - 2.15 dBi.

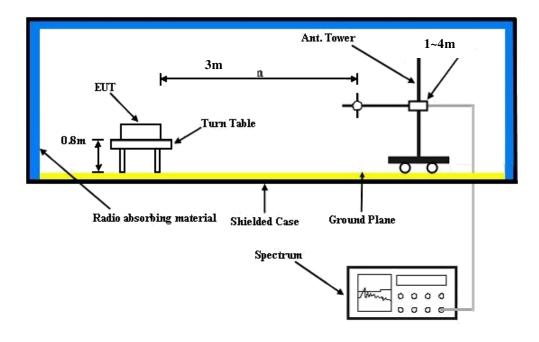

#### **Conducted Power Measurement:**

The EUT was set up for the maximum power with GSM, GPRS, EDGE, WCDMA, CDMA, and LTE link data modulation and link up with simulator. Set the EUT to transmit under low, middle and high channel and record the power level shown on simulator.

# 4.1.3 Test Setup

### **EIRP / ERP Measurement:**

For the actual test configuration, please refer to the attached file (Test Setup Photo).

### **Conducted Power Measurement:**

# 4.2 Frequency Stability Measurement

## 4.2.1 Limits of Frequency Stability Measurement

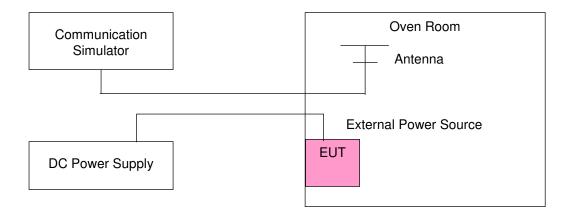

The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block.

#### 4.2.2 Test Procedure

- a. Device is placed at the oven room. The oven room could control the temperatures and humidity. Power warm up is at least 15 min and power applied should perform before recording frequency error.
- b. EUT is connected the external power supply to control the DC input power. The test voltage range is from minimum to maximum working voltage. Each step shall be record the frequency error rate.
- c. The temperature range step is 10 degrees in this test items. All temperature levels shall be hold the  $\pm 0.5$  °C during the measurement testing. The each temperature step shall be at least 0.5 hours, consider the EUT could be test under the stability condition.

**NOTE:** The frequency error was recorded frequency error from the communication simulator.

### 4.2.3 Test Setup

Report No.: RF161215C20-2 Page No. 16 / 50 Report Format Version: 6.1.1

# 4.2.4 Test Results

Frequency Error vs. Voltage

| Voltage | Ditage Low Channel |                       | High C          | Limit (ppm)           |      |

# 4.3 Occupied Bandwidth Measurement

### 4.3.1 Test Procedure

The EUT makes a call to the communication simulator. All measurements were done at low, middle and high operational frequency range. The communication simulator station system controlled a EUT to export maximum output power under transmission mode and specific channel frequency. Use OBW measurement function of Spectrum analyzer to measure 99 % occupied bandwidth.

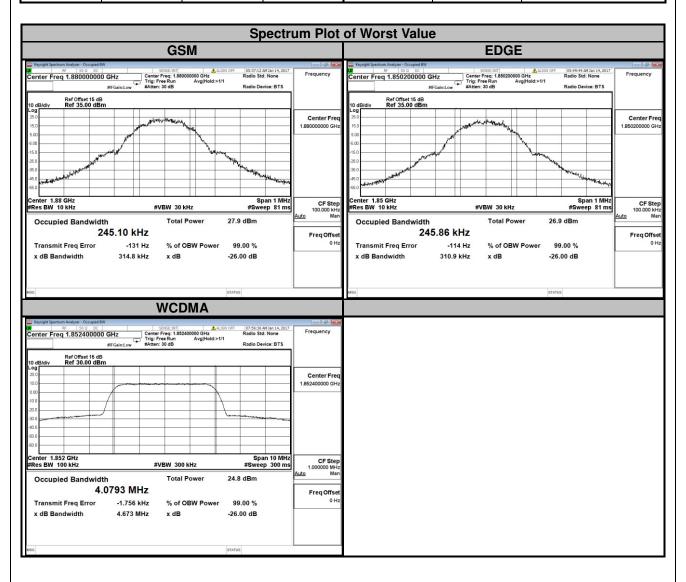

# 4.3.2 Test Setup

### 4.3.3 Test Result

| Channel | Frequency | 99 % Occupied<br>Bandwidth (kHz) |        | Channel | Frequency | 99 % Occupied<br>Bandwidth (MHz) |  |

## 4.4 Band Edge Measurement

## 4.4.1 Limits of Band Edge Measurement

Power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10 log(P) dB. In the 1 MHz bands immediately outside and adjacent to the frequency block a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed.

#### 4.4.2 Test Setup

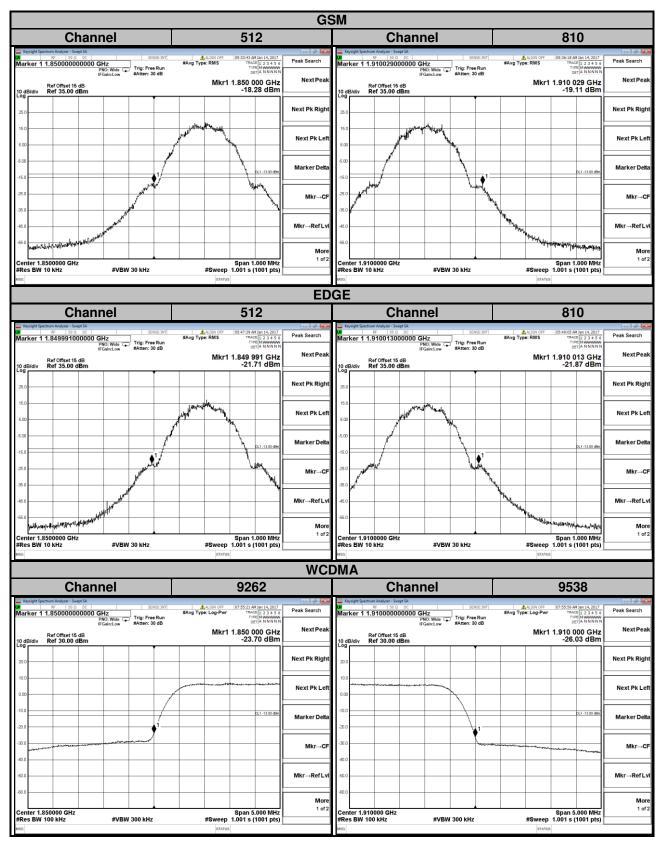

#### 4.4.3 Test Procedures

- a. All measurements were done at low and high operational frequency range.
- b. The center frequency of spectrum is the band edge frequency and span is 1 MHz. RB of the spectrum is 10 kHz and VB of the spectrum is 30 kHz (GSM/GPRS/EDGE).
- c. The center frequency of spectrum is the band edge frequency and span is 5 MHz. RB of the spectrum is 100 kHz and VB of the spectrum is 300 kHz (WCDMA).
- d. Record the max trace plot into the test report.

#### 4.4.4 Test Results

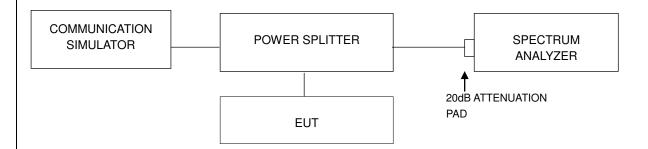

## 4.5 Peak to Average Ratio

## 4.5.1 Limits of Peak to Average Ratio Measurement

In measuring transmissions in this band using an average power technique, the peak to-average ratio (PAR) of the transmission may not exceed 13 dB.

# 4.5.2 Test Setup

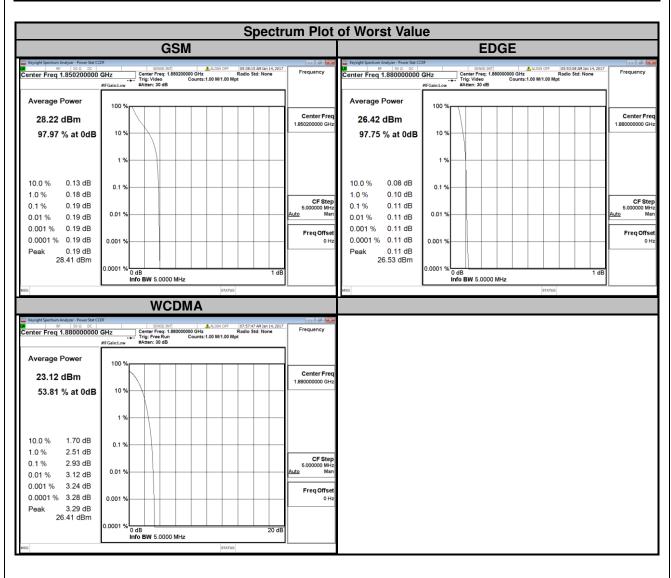

#### 4.5.3 Test Procedures

- 1. Set resolution/measurement bandwidth ≥ signal's occupied bandwidth;
- 2. Set the number of counts to a value that stabilizes the measured CCDF curve;
- 3. Record the maximum PAPR level associated with a probability of 0.1 %.

### 4.5.4 Test Results

| Channel | Frequency | Peak to Average Ratio (dB) |      | Channel | Frequency | Peak to Average Ratio (dB) |  |
|---------|-----------|----------------------------|------|---------|-----------|----------------------------|--|
|         | (MHz)     | GSM                        | EDGE |         | (MHz)     | WCDMA                      |  |
| 512     | 1850.2    | 0.19                       | 0.10 | 9262    | 1852.4    | 2.82                       |  |
| 661     | 1880.0    | 0.15                       | 0.11 | 9400    | 1880.0    | 2.93                       |  |
| 810     | 1909.8    | 0.11                       | 0.10 | 9538    | 1907.6    | 2.78                       |  |

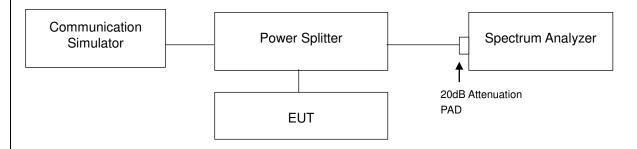

# 4.6 Conducted Spurious Emissions

## 4.6.1 Limits of Conducted Spurious Emissions Measurement

The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least 43 + 10 log(P) dB. The emission limit equal to -13 dBm.

### 4.6.2 Test Setup

#### 4.6.3 Test Procedure

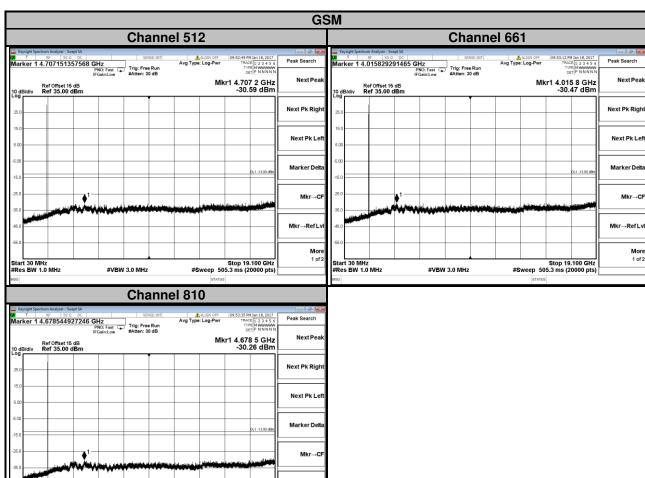

- a. The EUT makes a phone call to the communication simulator. All measurements were done at low, middle and high operational frequency range.
- b. Measuring frequency range is from 9 kHz to 9 GHz. 20 dB attenuation pad is connected with spectrum. RBW=1 MHz and VBW=3 MHz is used for conducted emission measurement.

# 4.6.4 Test Results

Start 30 MHz #Res BW 1.0 MHz

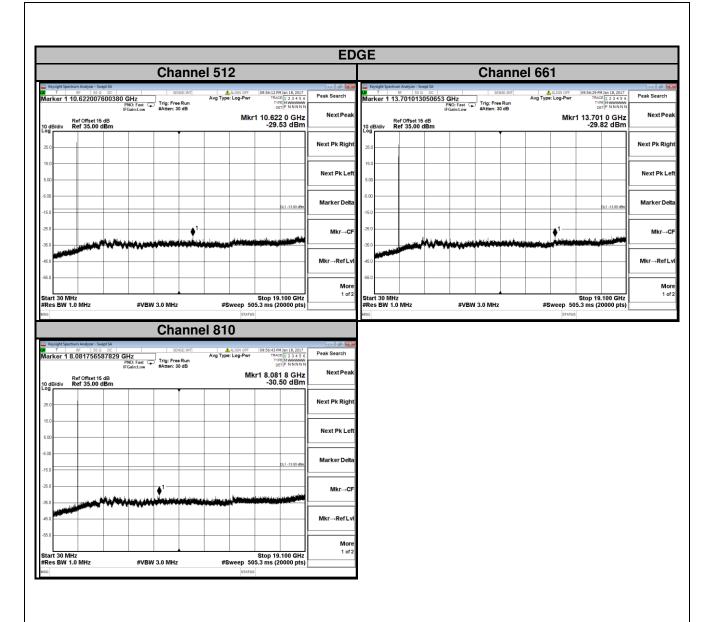

#VBW 3.0 MHz

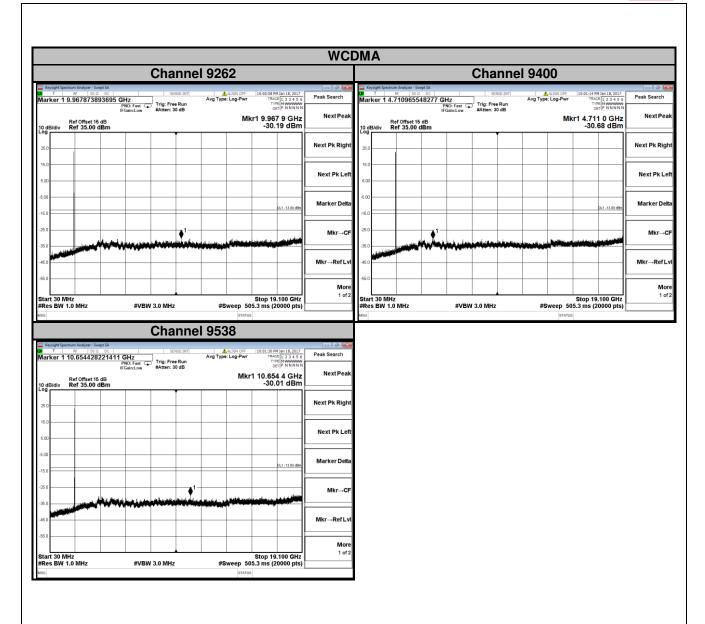

More 1 of 2

Stop 19.100 GHz #Sweep 505.3 ms (20000 pts)

#### 4.7 Radiated Emission Measurement

#### 4.7.1 Limits of Radiated Emission Measurement

The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least  $43 + 10 \log(P)$  dB. The emission limit is equal to -13 dBm.

#### 4.7.2 Test Procedure

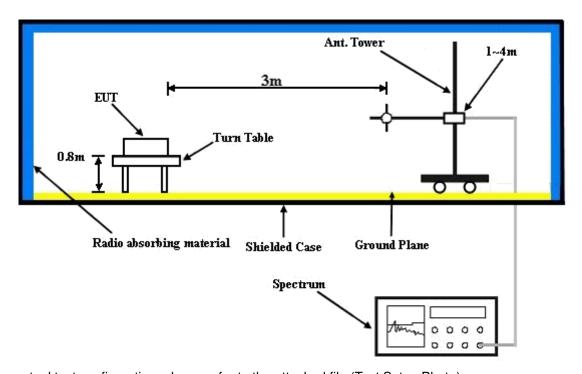

- a. Substitution method is used for E.I.R.P measurement. In the semi-anechoic chamber, EUT placed on the 0.8 m height of Turn Table, rotated the table around 360 degrees to search the maximum radiation power and receiver antenna shall be rotated vertical and horizontal polarization and moved height from 1 m to 4 m to find the maximum polar radiated power. The "Read Value" is the spectrum reading the maximum power value.
- b. The substitution horn antenna is substituted for EUT at the same position and signals generator export the CW signal to the substitution antenna via a TX cable. Rotated the Turn Table and moved receiving antenna to find the maximum radiation power. Adjust output power level of S.G to get a Value of spectrum reading equal to "Read Value" of step a. Record the power level of S.G.
- c. EIRP = Output power level of S.G TX cable loss + Antenna gain of substitution horn.
- d. E.R.P power can be calculated form E.I.R.P power by subtracting the gain of dipole, E.R.P power = E.I.P.R power 2.15 dBi.

NOTE: The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 1 MHz/3 MHz.

#### 4.7.3 Deviation from Test Standard

No deviation.

#### 4.7.4 Test Setup

For the actual test configuration, please refer to the attached file (Test Setup Photo).
