Apr. 29, 2006

FCC ID: RNE00597TX

The following lists are the answers for the comments on Apr. 27 & Apr. 28, 2006. Please kindly have a review on it:

1) FCC ID specified on the label is incorrect. FCC ID should cite RNE00597TX. Additionally, please note that the manual & operational description appears to show labeling in a different location. What is correct? Please review.

RE: FCC ID is corrected on the label. The file "Label" itself is correct. The statements as well as ID number curved on the device and "Label" itself are not the same thing. The "Label" is attached at the front side of the device just like the relevant file shows. Please see (RNE00597TX)Label_0429.

2) Labeling exhibit appears to be missing 2 part statement required by 15.109(a).

RE: The statements are added to the label.

3) Page 11 still has a few Average only measurements.

Additionally, the data appears to justify the use of a duty factor correction which is typical for pulsed emissions. However, some data on pages 11 & 12 appear to have a delta much more than the duty factor between peak and average measurements. Please review/correct.

RE: Please see (RNE00597TX)TestRpt_0429.

Thank you very much.
