

Technical Description

The EUT is a communication device of Bluetooth, use frequency hopping technology, operating in the 2400-2483.5MHz band, and employing 79 hopping channels.

The channel is divided into time slots, with a nominal slot length where each slot corresponds to different RF hop frequencies. The nominal hop rate is 1600 hops/s.

Highest data rate is 1Mbps, and 64kbps(PCM)for audio transmission, EUT use a integral & permanently attached antenna.
