

**To : Federal Communications Commission**

## **SAR Declaration**

### **1. Regulations**

According to § 15.247(b)(5) Systems operating under the provisions of this Section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess of the Commission's guidelines. See § 1.1307(b)(1) of this Chapter.

### **2. SAR Calculation**

This device is an audio conference equipment using Bluetooth Technologies. Therefore the distance between radiating parts of device and human body is more than 20cm.

The maximum output power of the device measured at the antenna connector is -1.16dBm and the maximum antenna gain is 0dBi.

Therefore the maximum radiated power is -1.16 dBm EIRP which equals 0.76mW

The maximum power in 20cm distance can be calculated as follows:

$$S = \text{EIRP} / (4\pi R^2) = 0.76 / (4\pi * 400) = 0.00015 \text{ mW/cm}^2$$

which is far below the MPE limits of 1 mW/cm<sup>2</sup>

Therefore the device meets the requirements of the clause 1 regulations.
