

Response to ATCB comments of 10-3-2006 regarding RS2SA10101B.

1) The antenna position photograph shows FCC ID No, instead of FCC ID:. Please confirm sample label is using correct nomenclature of "FCC ID:".

[Answer: The 'label position' photograph was intended to show label location only. The new drawing file ,SKYFi2Label Artwork New FCC rev3.pdf' has been uploaded showing the proper FCC ID nomenclature.](#)

2) The revised test report is requesting short term confidentiality. Please note that this is not allowed (confidentiality is not allowed on test reports).

[Answer: Noted.](#)

3) Test photographs are integrated into the most recent updated report. Note that these should only be provided as a separate exhibit, especially if confidentiality is requested on the photos. Please correct the report.

[Answer: A new report, SkyFi2 Report_of_Measurements6.pdf' has been uploaded, along with a new test setup photos document, 'SkyFi2_Report_of_Measurements test set up photos3.pdf.'](#)

4) The ferrite shown in the manual on some accessories appears to be snap on. Please note that the FCC requires this to be installed in a fashion that is permanent (i.e. molded, shrink wrapped, etc.). Providing a snap on ferrite that can be removed is not allowed. Please review. Note that page 5 suggests snap on, while page 18 suggests permanent.

[Answer: Ferrites are shrinkwrapped into the power cable.](#)
