

- Note:
- 1) All electrolytic capacitors are 16V or above, +80%-20% except specified.
  - 2) All ceramic capacitors are 16V or above, +80%-20% except specified.
  - 3) All resistors are +/-5% except specified.
  - 4) All diodes are 1N4148 except specified.
  - 5) \* Adjust by factory to achieve the correct sensitivity.
  - 6) In PCB layout, the trace separation between VCC and GND should be minimum 1.5mm.
  - 7) Fuse/Polyswitch with its surrounding 1.5mm around should be free of trace.
