FCC CFR47 CERTIFICATION

PART 24E

TEST REPORT

FOR

CELLULAR PHONE AMPLIFIER

MODEL: CM 1000

FCC ID:RSNCM1000

REPORT NUMBER: 03U2456-1

ISSUE DATE: JANUARY 14, 2004

Prepared for
CELLPHONE-MATE, INC.
36543 SAN PEDRO DRIVE # 277
FREMONT, CA 94536
U.S.A.

Prepared by
COMPLIANCE CERTIFICATION SERVICES
561F MONTEREY ROAD, ROUTE 2

TABLE OF CONTENT

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

1. TEST RESULT CERTIFICATION

COMPANY NAME: CELLPHONE-MATE, INC.
36543 SAN PEDRO DRIVE # 277
FREMONT, CA 94536
U.S.A.

EUT DESCRIPTION CELLULAR PHONE AMPLIFIER

MODEL NAME: CM 1000

DATE TESTED: JANUARY 14, 2004

TYPE OF EQUIPMENT	INTENTIONAL RADIATOR, CELL PHONE AMPLIFIER
MEASUREMENT PROCEDURE	ANSI 63.4 / 2001, TIA/EIA 603
PROCEDURE	CERTIFICATION
FCC RULE	CFR 47 PART 24 SUBPART E

Compliance Certification Services, Inc. tested the above equipment for compliance with the requirement set forth in CFR 47, PART 24 subpart E Cellular Radiotelephone Service. The equipment in the configuration described in this report, shows the measured emission levels emanating from the equipment do not exceed the specified limit.

Note : This document reports conditions under which testing was conducted and results of tests performed. This document may not be altered or revised in any way unless done so by Compliance Certification Services and all revisions are duly noted in the revisions section. Any alteration of this document not carried out by Compliance Certification Services will constitute fraud and shall nullify the document.

Tested By:

FRANK IBRAHIM
EMC SUPERVISOR
COMPLIANCE CERTIFICATION SERVICES

Released For CCS By:

THU CHAN
EMC SUPERVISOR
COMPLIANCE CERTIFICATION SERVICES

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

2. EUT DESCRIPTION

1900 MHz CDMA/GSM Cell Phone Amplifier:

- an EIRP of 24.8 dBm for CDMA mode, with 5 dBi gain antenna.
- an EIRP of 29.3 dBm for CDMA mode, with 3 dBi gain antenna.

- an EIRP of 23.7 dBm for GSM mode, with 5 dBi gain antenna.
- an EIRP of 26.3 dBm for GSM mode, with 3 dBi gain antenna.

3. TEST METHODOLOGY

Both conducted and radiated testing were performed according to the procedures documented on chapter 13 of ANSI C63.4 and FCC CFR 47 2.1046, 2.1047, 2.1049, 2.1051, 2.1053, 2.1055 and 2.1057.

4. TEST FACILITY

The sites and measurement facilities used to collect the radiated data are located at 561F Monterey Road, Morgan Hill, California, USA. The sites are constructed in conformance with the requirements of ANSI C63.7, ANSI C63.4 and CISPR Publication 22.

5. ACCREDITATION AND LISTING

The test facilities used to perform radiated and conducted emissions tests are accredited by National Voluntary Laboratory Accreditation Program for the specific scope of accreditation under Lab Code: 200065-0 to perform Electromagnetic Interference tests according to FCC PART 15 AND CISPR 22 requirements. No part of this report may be used to claim or imply product endorsement by NVLAP or any agency of the US Government. In addition, the test facilities are listed with Federal Communications Commission (reference no: 31040/SIT (1300B3) and 31040/SIT (1300F2))

6. MEASURING INSTRUMENT CALIBRATION

The measuring equipment, which was utilized in performing the tests documented herein, has been calibrated in accordance with the manufacturer's recommendations for utilizing calibration equipment, which is traceable to recognized national standards.

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

7. INSTRUMENTATION LIST AND EUT SETUP INFORMATION

TEST EQUIPMENT LIST				
Name of Equipment	Manufacturer	Model No.	Serial No.	Due Date
Line Filter	Lindgren	LMF-3489	497	CNR
LISN, 10 kHz ~ 30 MHz	Solar	8012-50-R-24-BNC	8379443	10/13/04
LISN, 10 kHz ~ 30 MHz	FCC	LISN-50/250-25-2	2023	10/13/04
EMI Test Receiver	R & S	ESHS 20	827129/006	7/17/04
Preamplifier, 1 ~ 26.5 GHz	HP	8449B	3008A00369	4/25/04
Spectrum Nalyzer	HP	8593EM	3710A00205	10/1/04
Signal Generator, 2 ~ 40 GHz	R & S	SMP04	DE 34210	5/25/05
Spectrum Nalyzer	Agilent	E4440A	US41421507	5/8/04
Horn Antenna	ETS.Lindgren	3117	00029310	12/26/04
Horn Antenna	ETS.Lindgren	3117	00029301	12/26/04

TEST PERIPHRALS

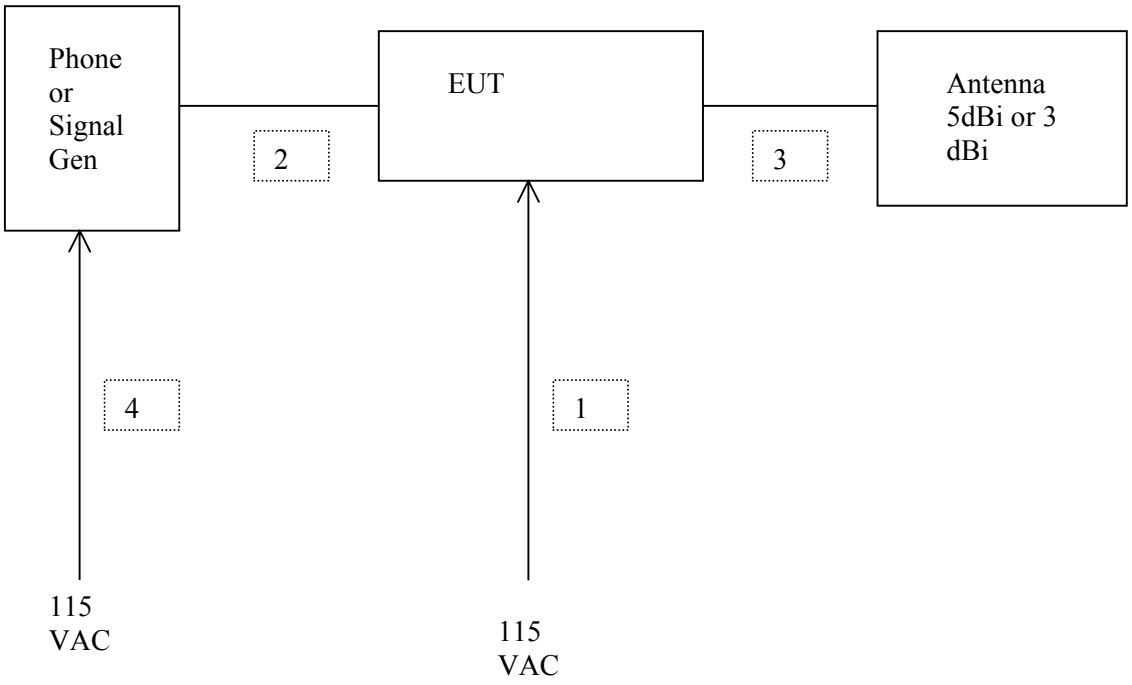
TEST PERIPHERALS				
Device Type	Manufacturer	Model Number	Serial Number	FCC ID
Signal Generator	HP	E4432B	US39341935	N/A
Cell Phone	Nokia	6185	253/13967541	GMLNSD-3AX
Cell Phone Charger	Nokia	ACP-7U	H6316	N/A
AC/DC Adapter	HiTRON	HES10-12010-0-1	0115	N/A

TEST I/O CABLES

TEST I / O CABLES								
Cable No	I/O Port	# of I/O Port	Connector Type	Type of Cable	Cable Length	Data Traffic	Bundled	Remark
1	AC/DC	1	US115	Unshielded	1.5 m	No	No	N/A
2	Phone / Sig. Gen.	1	SMA	Shielded	10 cm	Yes	No	N/A
3	Antenna	1	SMA	Shielded	1 m	Yes	No	N/A
4	AC/DC	1	US115	Unshielded	1.5m	No	No	N/A

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

TEST SETUP



This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

8. MODIFICATIONS LIST

The following modifications were performed for the EUT to pass emissions requirements:

1. Copper tape was placed on the input and output ports of the EUT to close the gap.
2. Copper tape was also connecting the SMA connector to chassis providing a grounding path.

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

9. TEST SETUP, PROCEDURE AND RESULT

9.1. SECTION 2.1046: RF POWER OUTPUT (CONDUCTED)

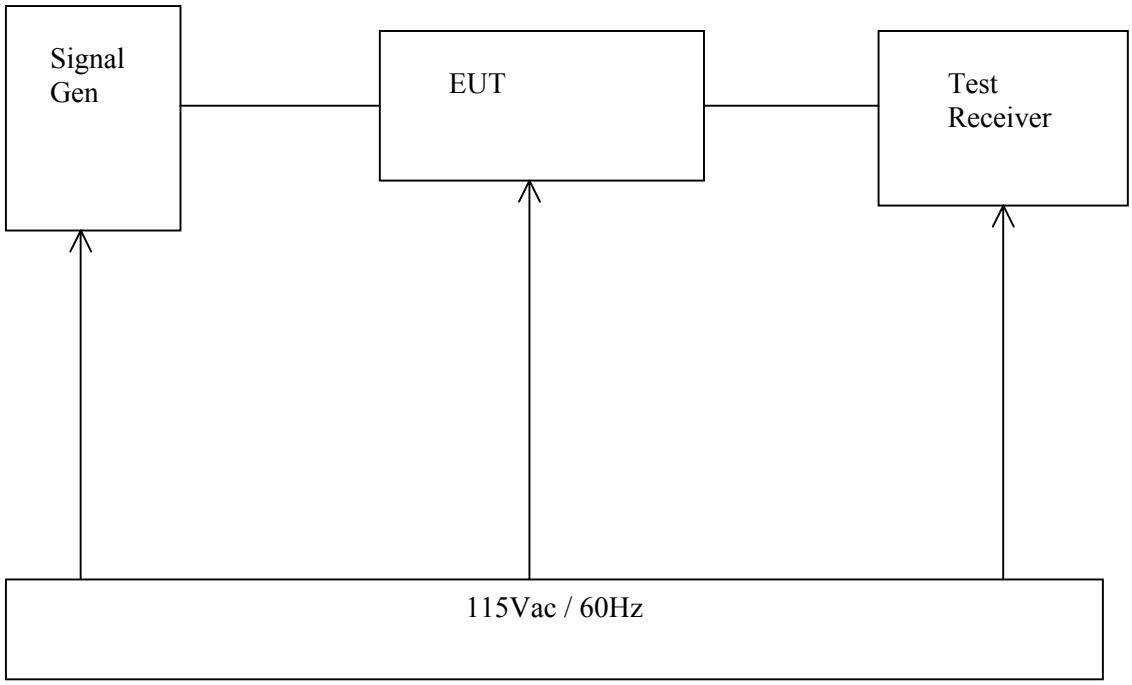
INSTRUMENTS LIST

EQUIPMENT	MANUFACTURE	MODEL NO.	SERIAL NO.	CAL. DUE DATE
PSA Analyzer	Agilent	E446A	US42070220	1/13/04
10dB Attenuator	Agilent	8493C	59028	N/A
DC Power Supply	Kenwood	PA36-3A	7060074	N/A

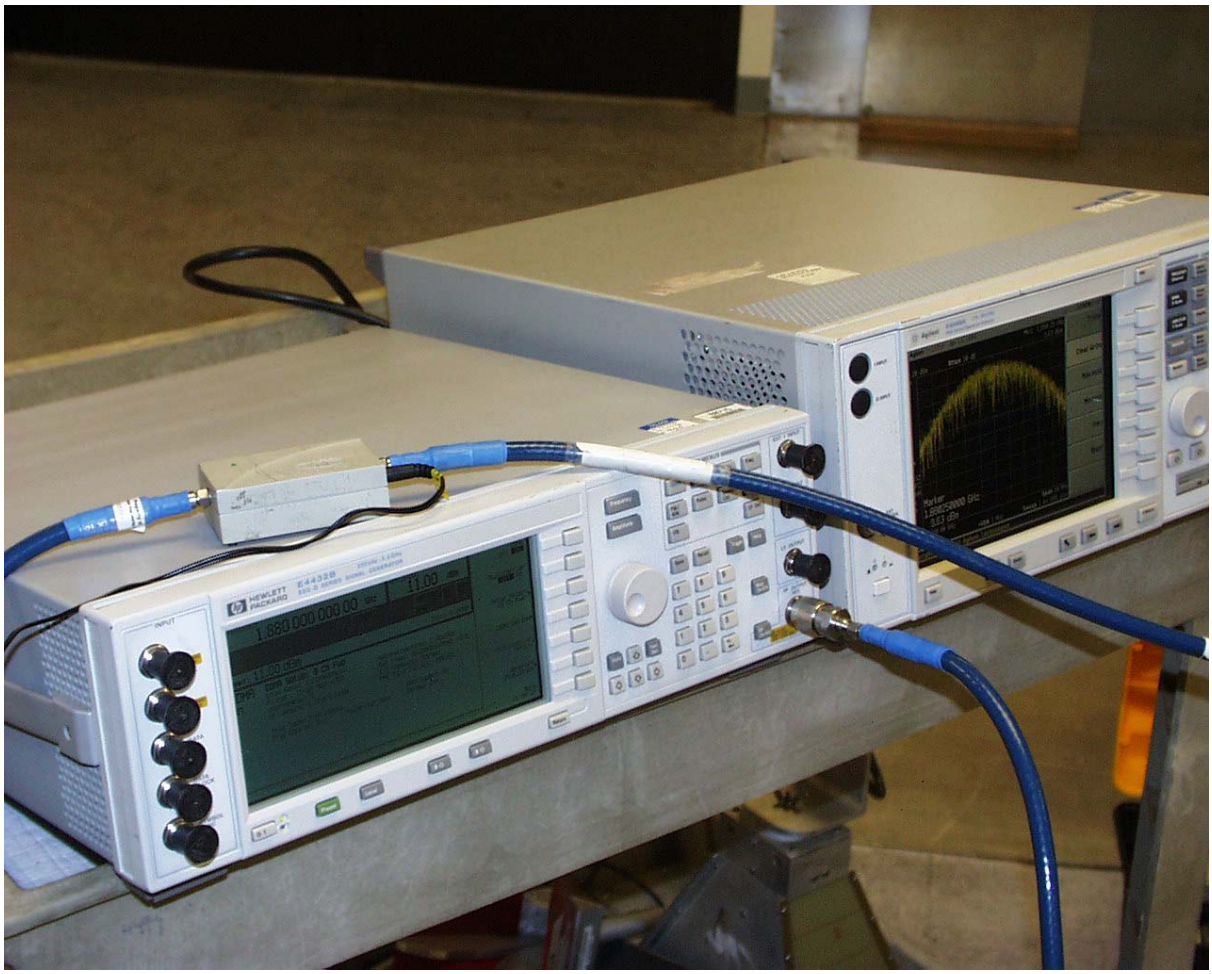
TEST PROCEDURE:

The output port of the EUT was connected to a spectrum analyzer, the RBW and VBW were set to 3MHz, the output peak power was recorded, the Input cable going to the EUT was connected to a spectrum analyzer, the output power was measured.

TEST SETUP



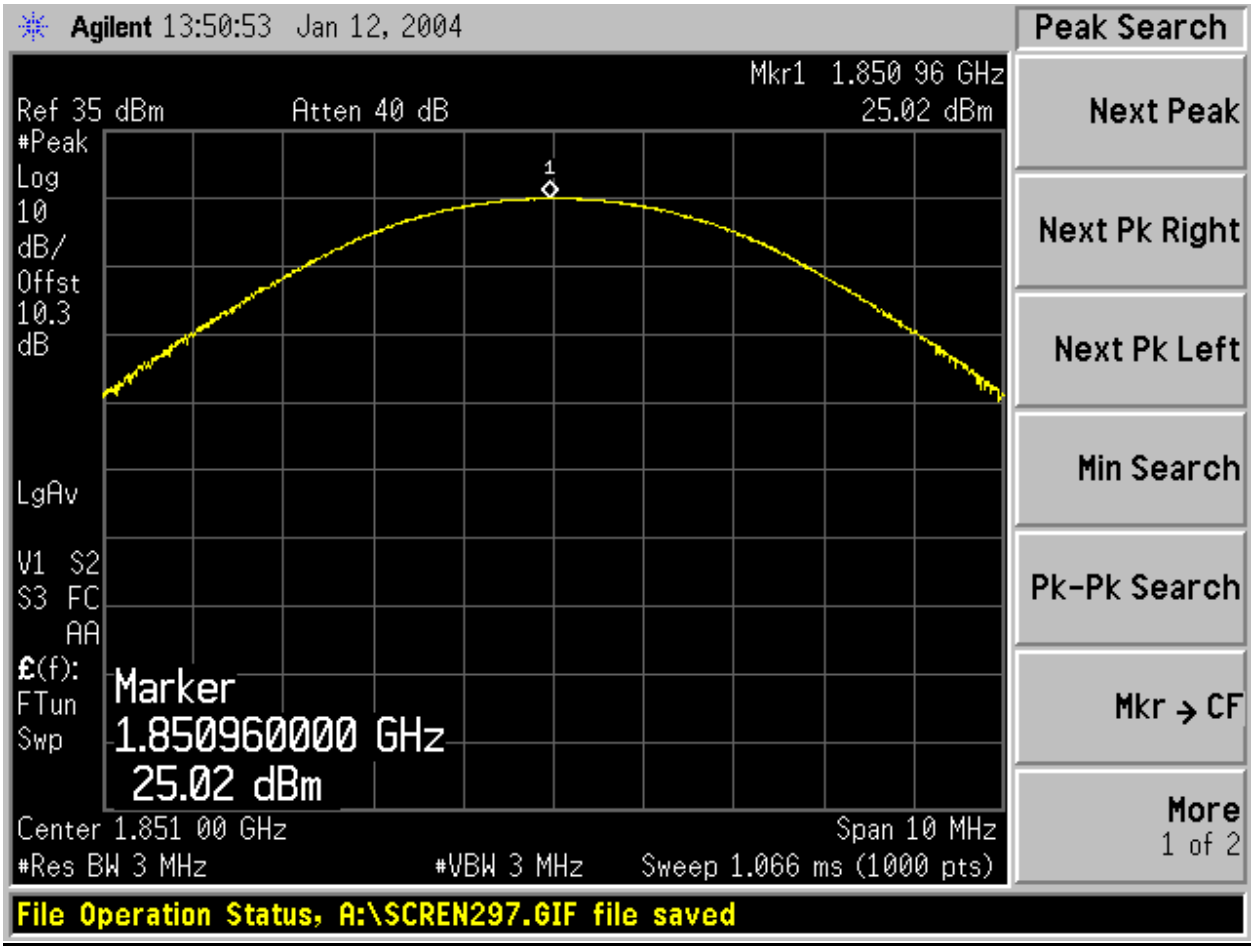
This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.



This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

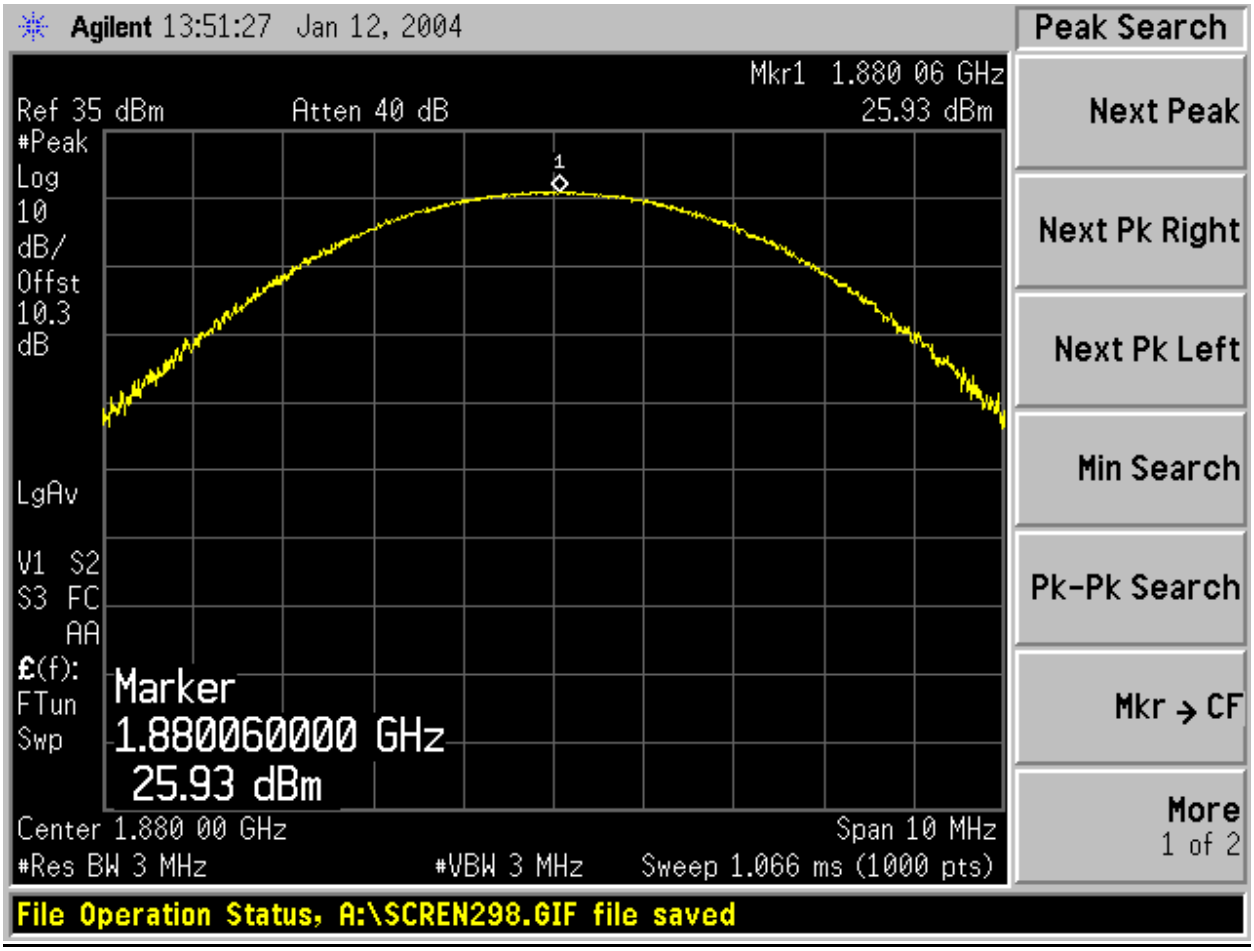
RESULTS:

Output Port, CDMA, Low Channel:



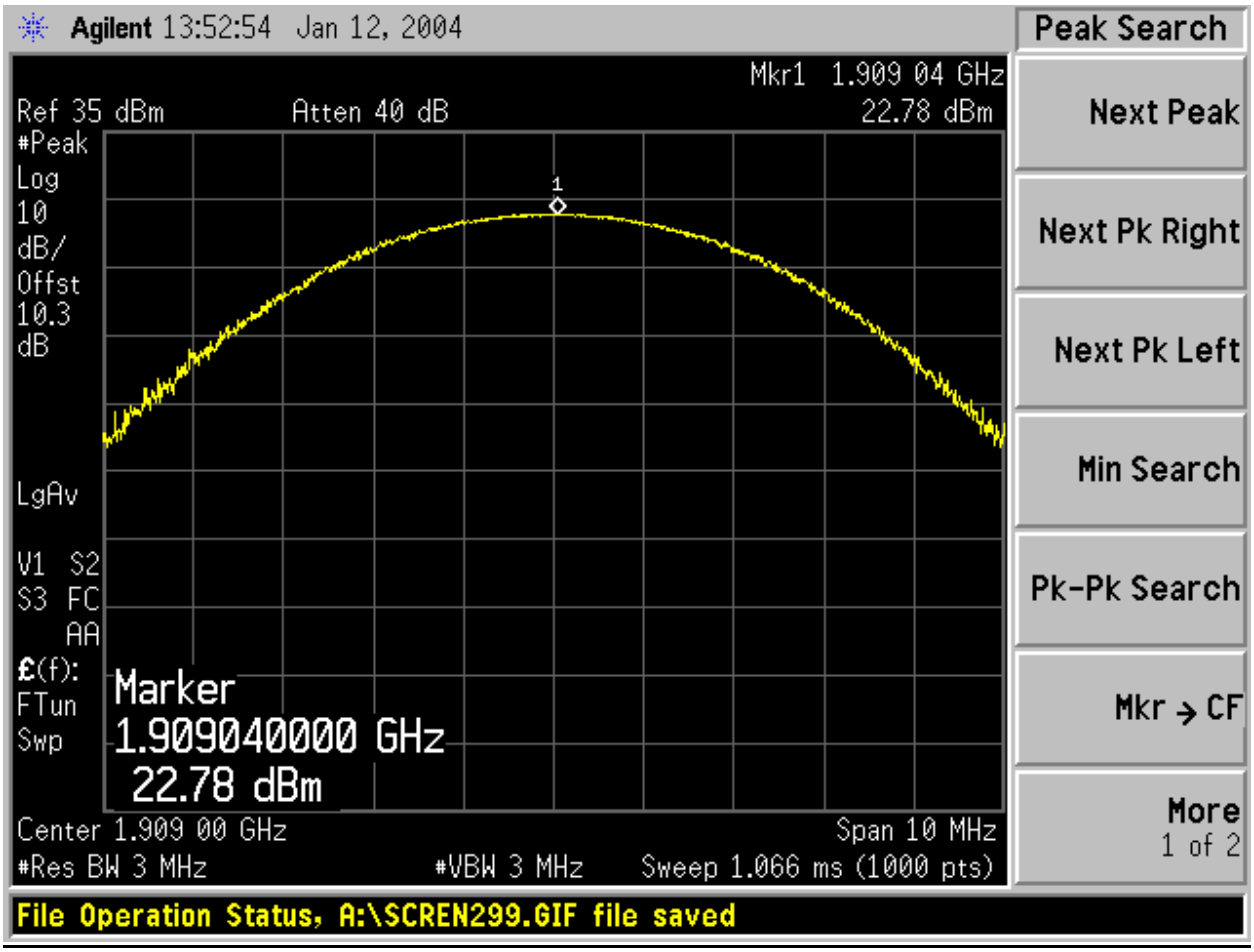
This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

Output Port, CDMA, Mid Channel:



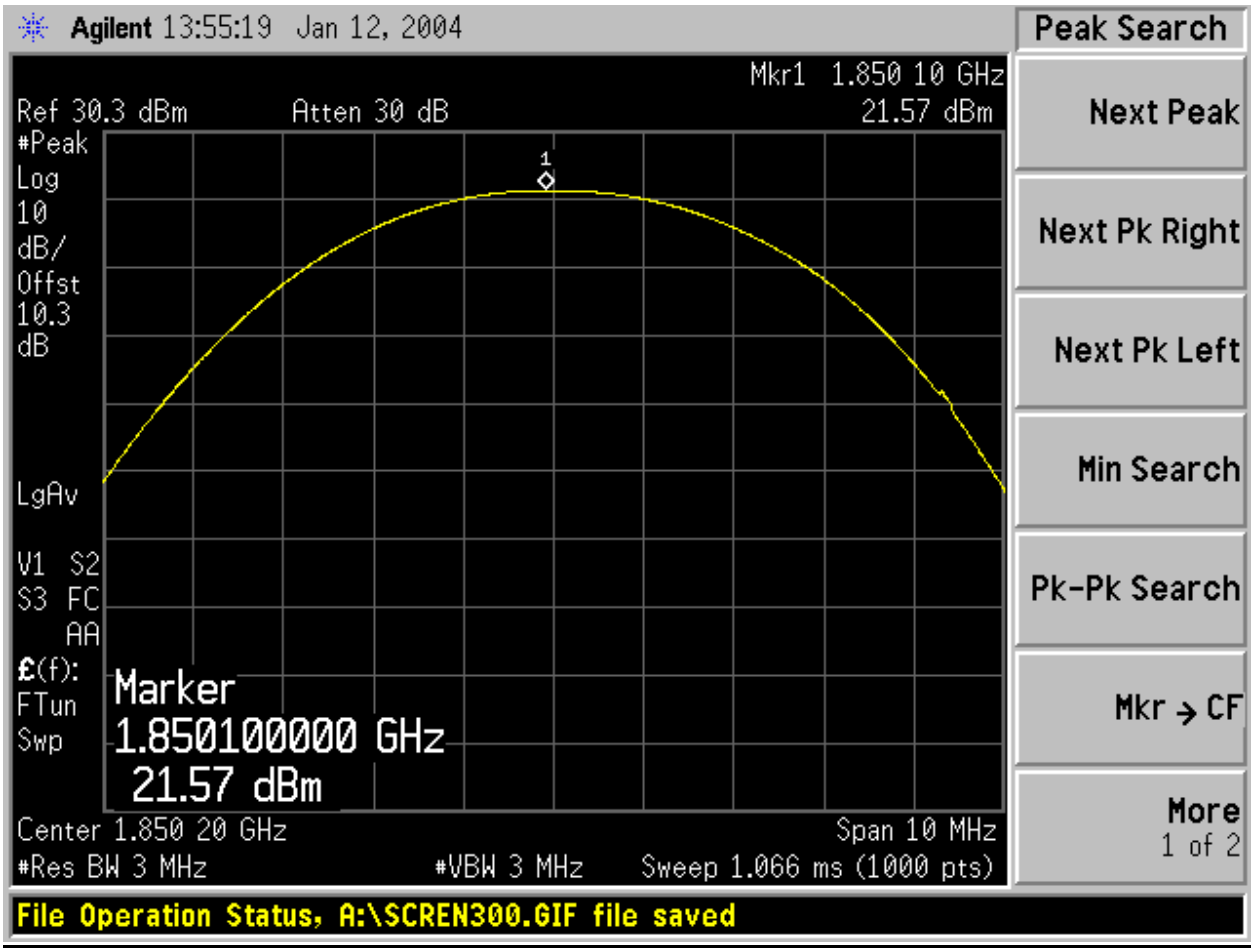
This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

Output Port, CDMA, High Channel:



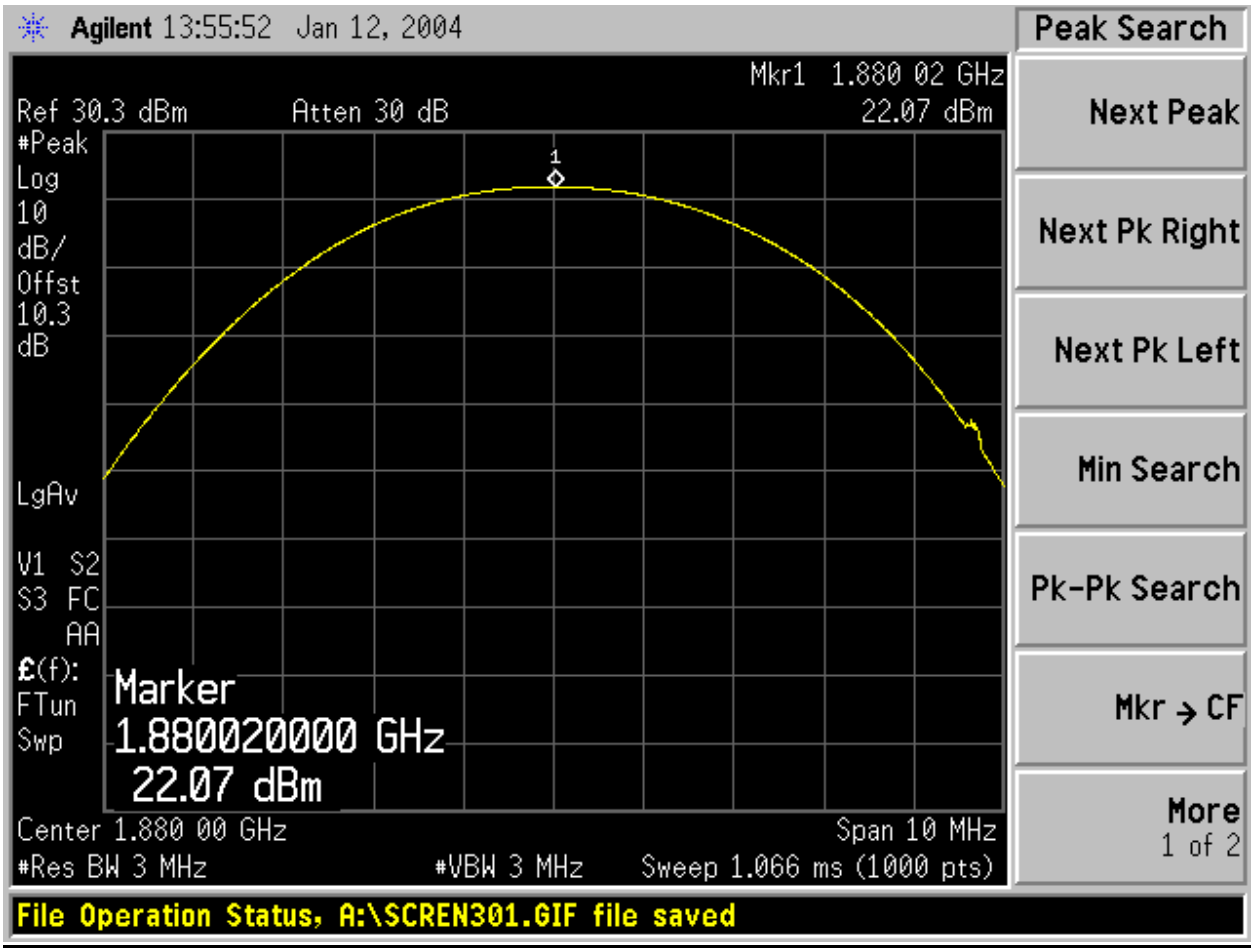
This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

Output Port, GSM, Low Channel:



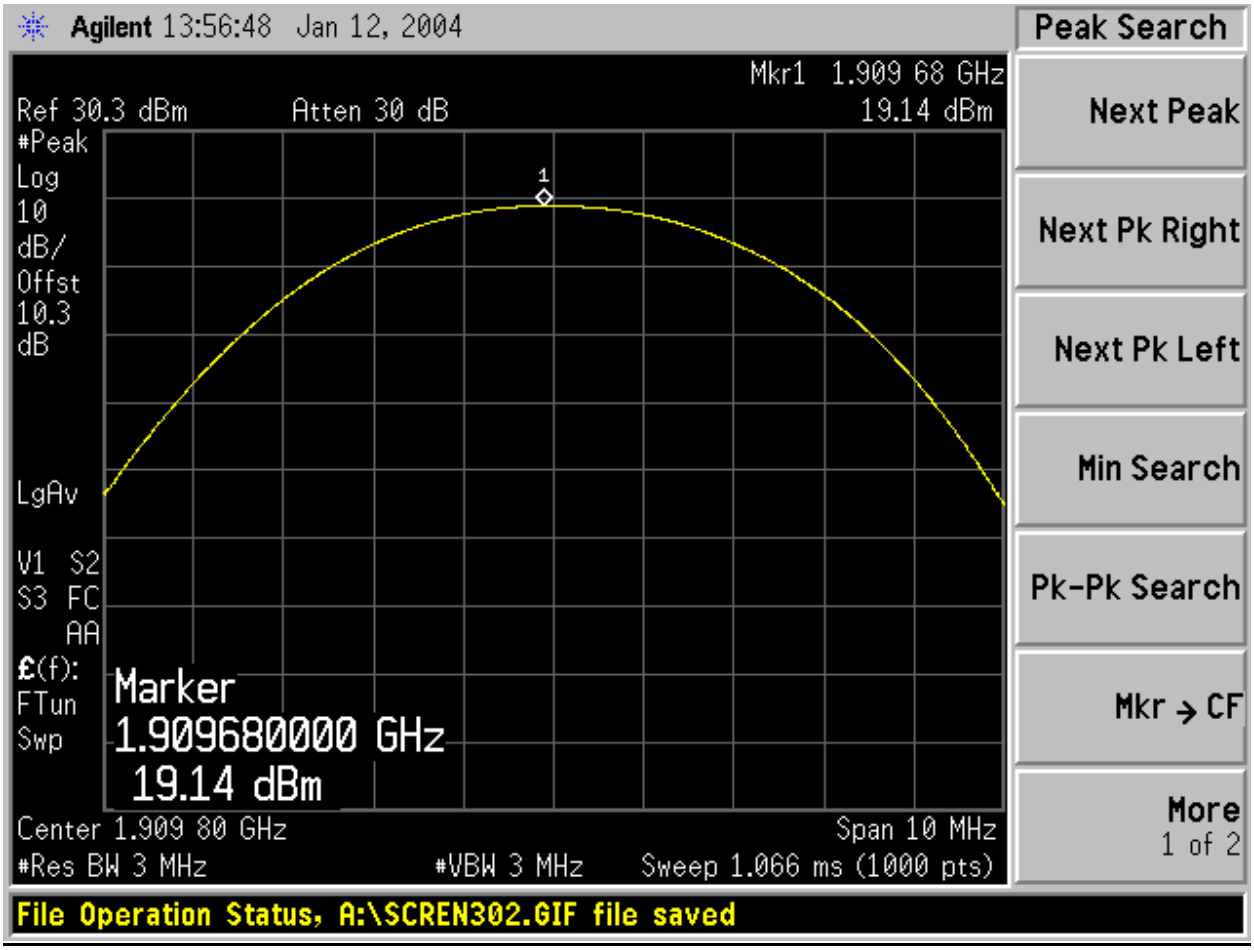
This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

Output Port, GSM, Mid Channel:



This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

Output Port, GSM, High Channel:



This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

9.4. SECTION 2.1046: RF POWER OUTPUT (RADIATED)

MEASUREMENT PROCEDURE

1). On a test site, the EUT shall be placed on a turntable, and in the position closest to the normal use as declared by the user.

2). The test antenna shall be oriented initially for vertical polarization located 3m from the EUT to correspond to the frequency of the transmitter.

3). The output of the test antenna shall be connected to the measuring receiver and either a peak or quasi-peak detector was used for the measurement as indicated on the report. The detector selection is based on how close the emission level was approaching the limit.

4). The transmitter shall be placed 0.80 meter above the ground plane, the X, Y, and Z positions shall be tested and the worst case reported. The transmitter shall be switched on with typical modulation and the measurement receiver shall be tuned to the frequency of the transmitter under test.

5). The test antenna shall be raised and lowered through the specified range of height until a maximum signal level is detected by the measuring receiver.

6). The transmitter shall than be rotated through 360° in the horizontal plane, until the maximum signal level is detected by the measuring receiver.

7). The test antenna shall be raised and lowered again through the specified range of height until a maximum signal level is detected by the measuring receiver.

8). The maximum signal level detected by the measuring receiver shall be noted.

9). The transmitter shall be replaced by a tuned dipole or horn antenna (substitution antenna).

10). The substitution antenna shall be oriented for vertical polarization and the length of the substitution antenna shall be adjusted to correspond to the frequency of the transmitter.

11). The substitution antenna shall be connected to a calibrated signal generator.

12). If necessary, the input attenuator setting of the measuring receiver shall be adjusted in order to increase the sensitivity of the measuring receiver.

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

13). The test antenna shall be raised and lowered through the specified range of the height to ensure that the maximum signal is received.

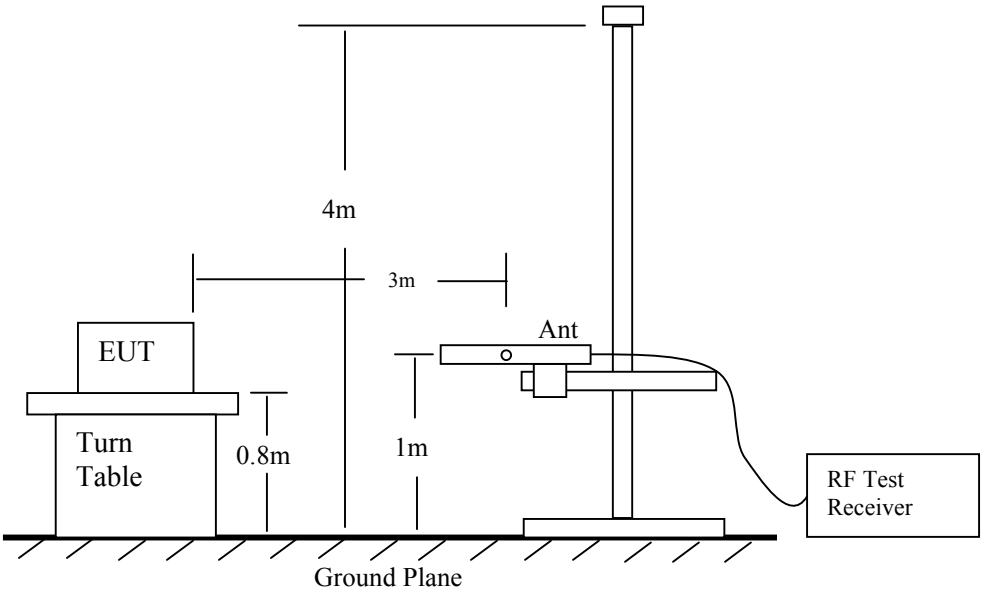
14). The input signal to the substitution antenna shall be adjusted to the level that produces a level detected by the measuring receiver, that is equal to the level noted while the transmitter radiated power was measured, corrected for the change of input attenuation setting of the measuring receiver.

15). The input level to the substitution antenna shall be recorded as power level in dBm, corrected for any change of input attenuator setting of the measuring receiver.

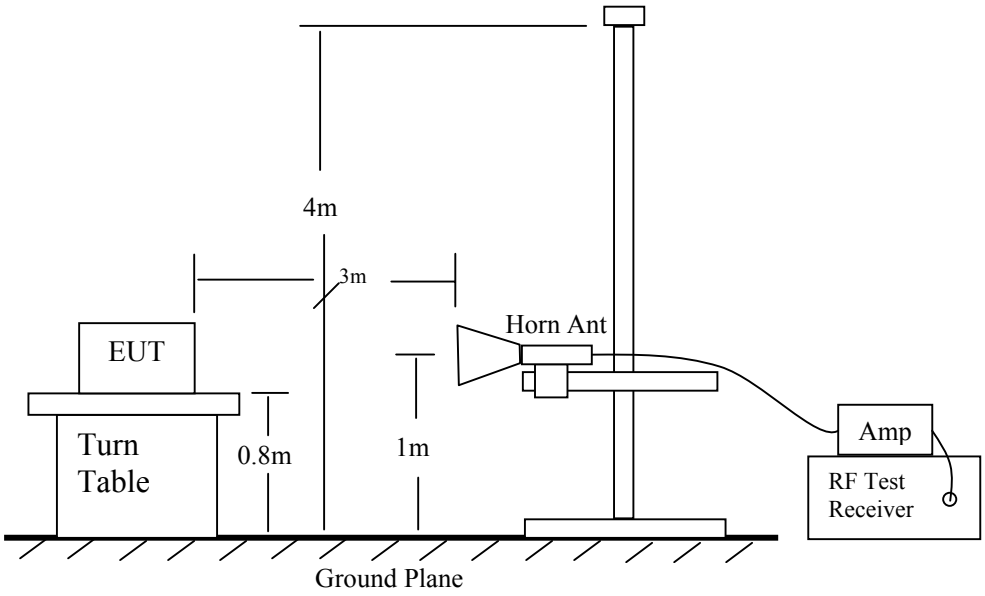
16). The measurement shall be repeated with the test antenna and the substitution antenna oriented for horizontal polarization.

17). The measure of the effective radiated power is the larger of the two levels recorded, at the input to the substitution antenna, corrected for the gain of the substitution antenna if necessary.

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

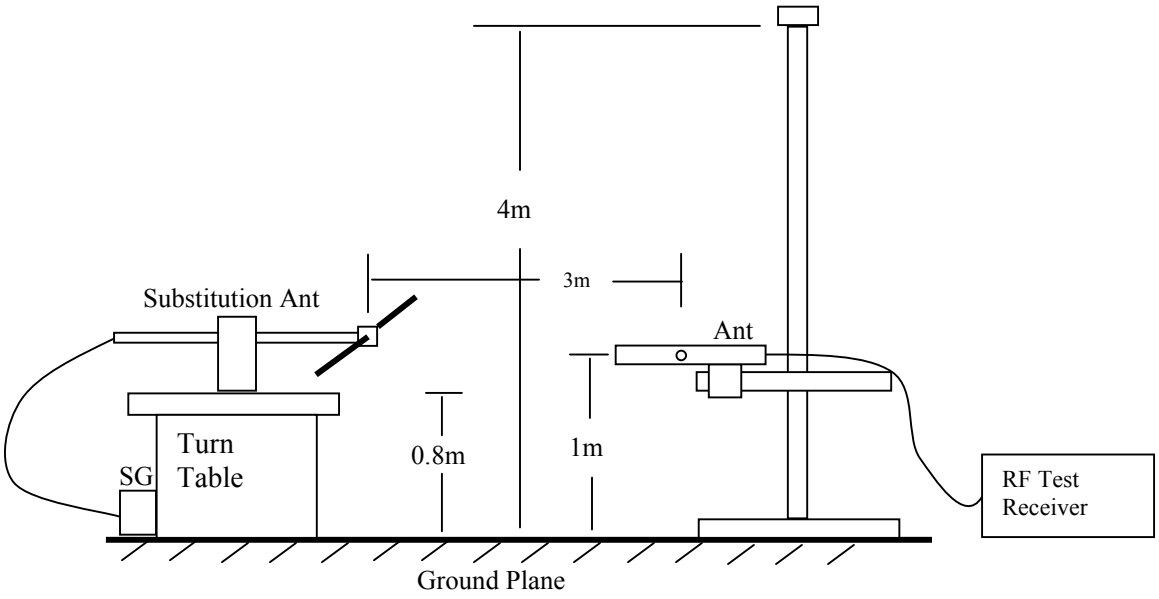


Radiated Emission Measurement 30 MHz to 1000 MHz

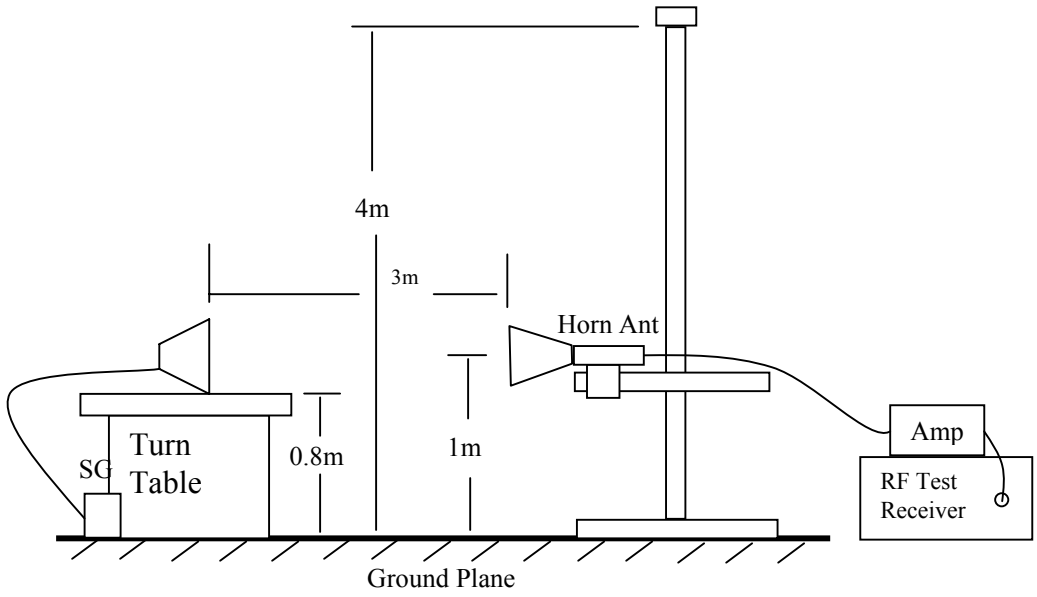


Radiated Emission Above 1000 MHz

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.



Radiated Emission – Substitution Method Set-up for Freq below 1GHz



Radiated Emission – Substitution Method Set-up for Freq above 1GHz

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

MEASUREMENT RESULT:

1900MHz CDMA/GSM Output Power Measurement:

With 5 dBi Gain Antenna:		**EIRP**
	FREQUENCY	**PEAK**
1900 MHz (GSM)	(MHz)	(dBm)
LOW	1850.2	22.0
MID	1880.0	23.7
HI	1909.8	21.5

		EIRP
	FREQUENCY	**PEAK**
1900 MHz (GDMA)	(MHz)	(dBm)
LOW	1851.0	24.0
MID	1880.0	24.8
HI	1909.0	24.1

With 3 dBi Gain Antenna:		**EIRP**
	FREQUENCY	**PEAK**
1900 MHz (GSM)	(MHz)	(dBm)
LOW	1850.2	26.1
MID	1880.0	26.3
HI	1909.8	25.7

		EIRP
	FREQUENCY	**PEAK**
1900 MHz (GDMA)	(MHz)	(dBm)
LOW	1851.0	29.3
MID	1880.0	29.3
HI	1909.0	28.4

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

9.2. SECTION 2.1047: MODULATION CHARACTERISTICS

Not applicable.

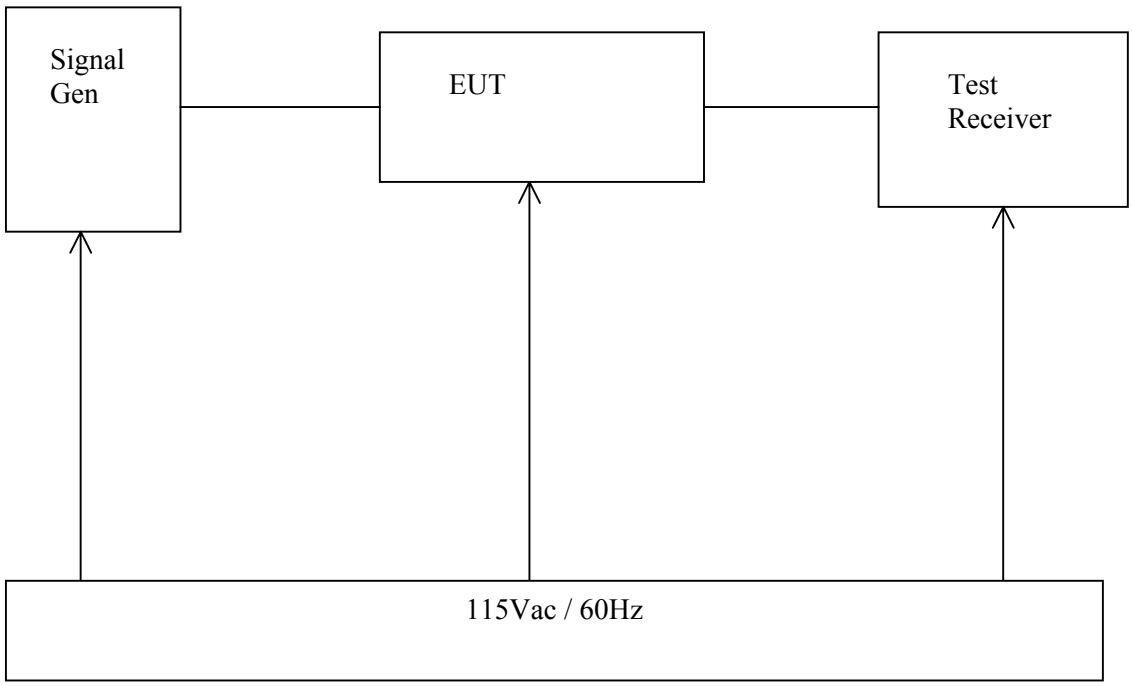
9.3. SECTION 2.1049: OCCUPIED BANDWIDTH

INSTRUMENTS LIST

EQUIPMENT	MANUFACTURE	MODEL NO.	SERIAL NO.	CAL. DUE DATE
PSA Analyzer	Agilent	E446A	US42070220	1/13/04
10dB Attenuator	Agilent	8493C	59028	N/A
DC Power Supply	Kenwood	PA36-3A	7060074	N/A

TEST PROCEDURE:

A comparison of the input- modulated spectrum and the output- modulated spectrum of the EUT was performed. RBW was set to 1 % of EBW, VBW was set to 3 times the RBW, the signal generator with CDMA or GSM modulation was connected to the input port of the EUT, the output port was connected to the spectrum analyzer, the analyzer was tuned to the transmit frequency, 26 dB BW was measured and recorded for Low, Mid and High channels.
TEST SETUP



This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

RESULTS:

Mode	Channel	26 dB BW (MHz) Output Port	26 dB BW (MHz) Input Port
CDMA	Low	1.376	1.371
CDMA	Mid	1.381	1.383
CDMA	High	1.364	1.374
GSM	Low	0.297912	0.290365
GSM	Mid	0.295447	0.298322
GSM	High	0.296141	0.299641

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

9.4. SECTION 2.1051: SPURIOUS EMISSIONS AT ANTENNA TERMINAL

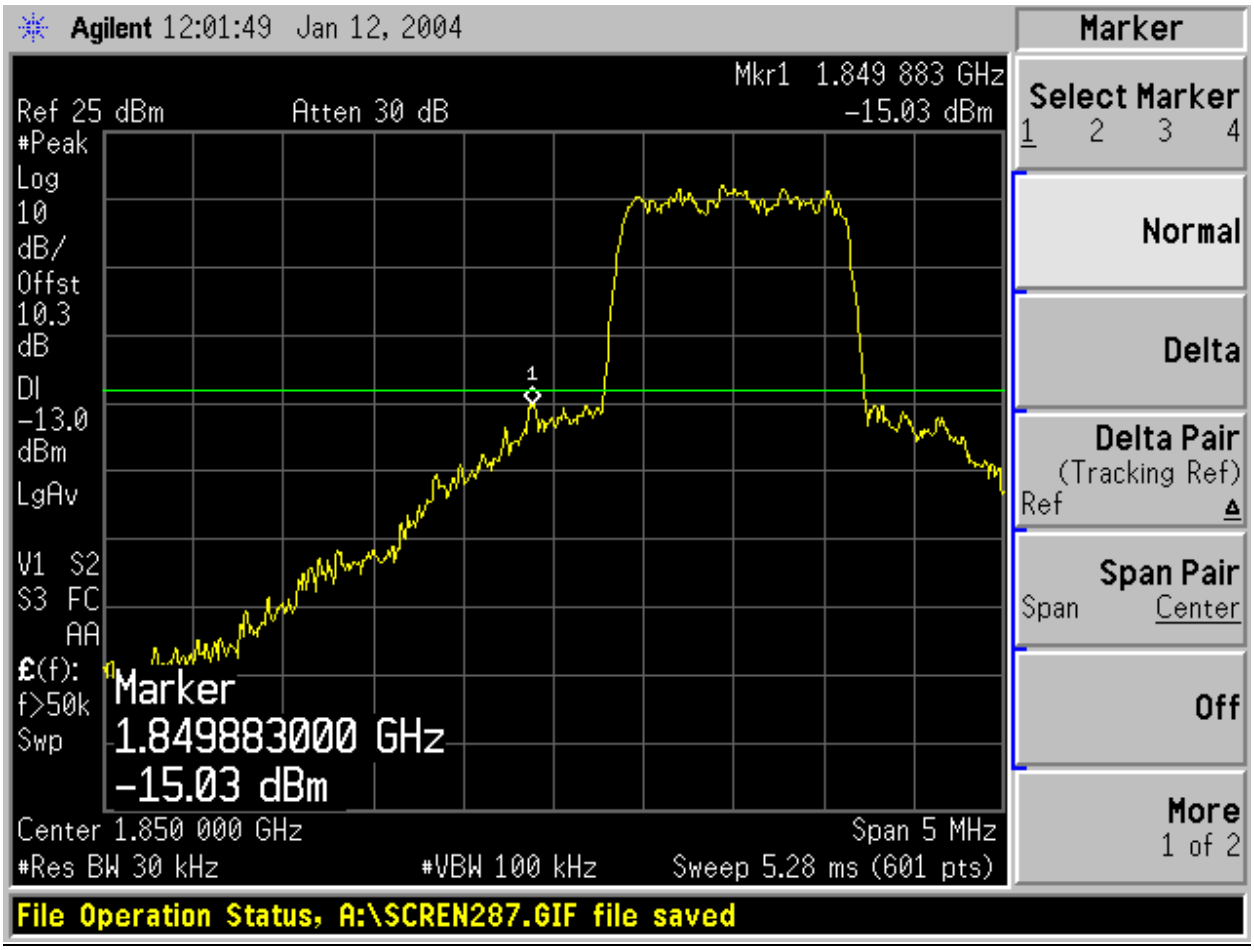
TEST PROCEDURE:

The output of the EUT was connected to a spectrum analyzer, RBW & VBW were set to 1 MHz, the spectrum from 30MHz to 10th harmonic of the fundamental was investigated for CDMA/ GSM modes, for Low, Mid and High channels. For the frequency span of 1MHz close to the fundamental frequency the RBW was reduced to 1% of the EBW.

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

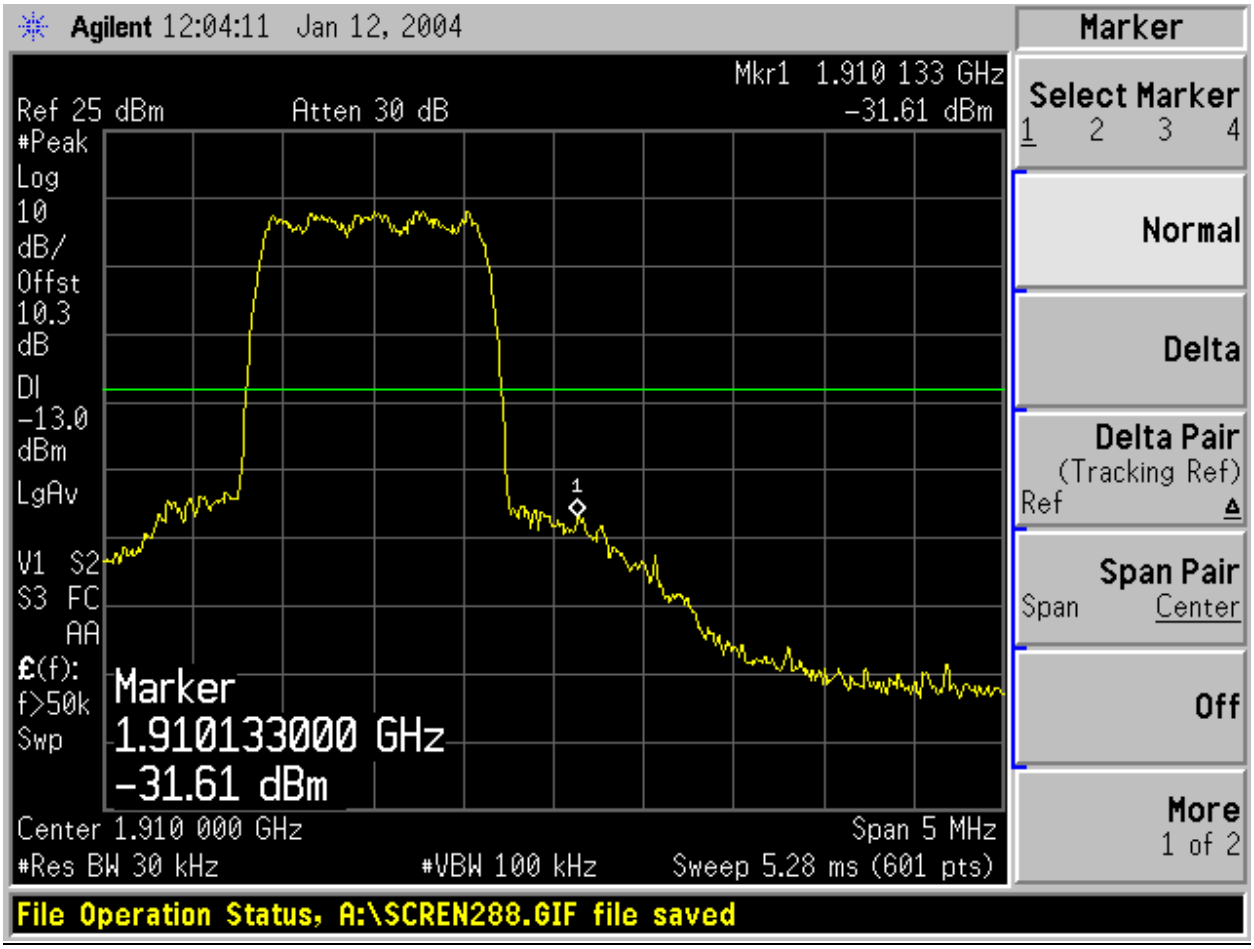
RESULTS:

BAND EDGE , CDMA, Low Channel:



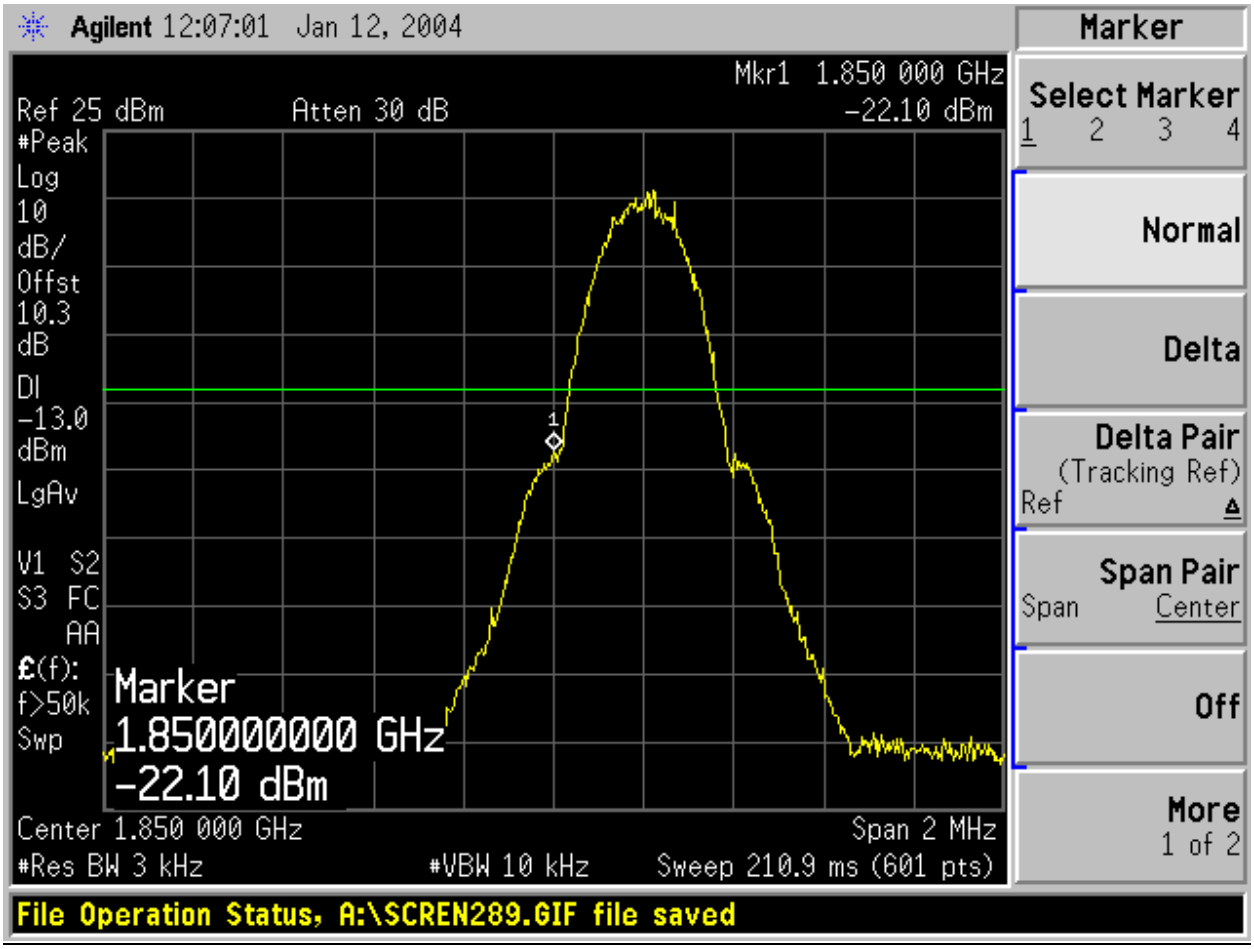
This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

BAND EDGE , CDMA, High Channel:



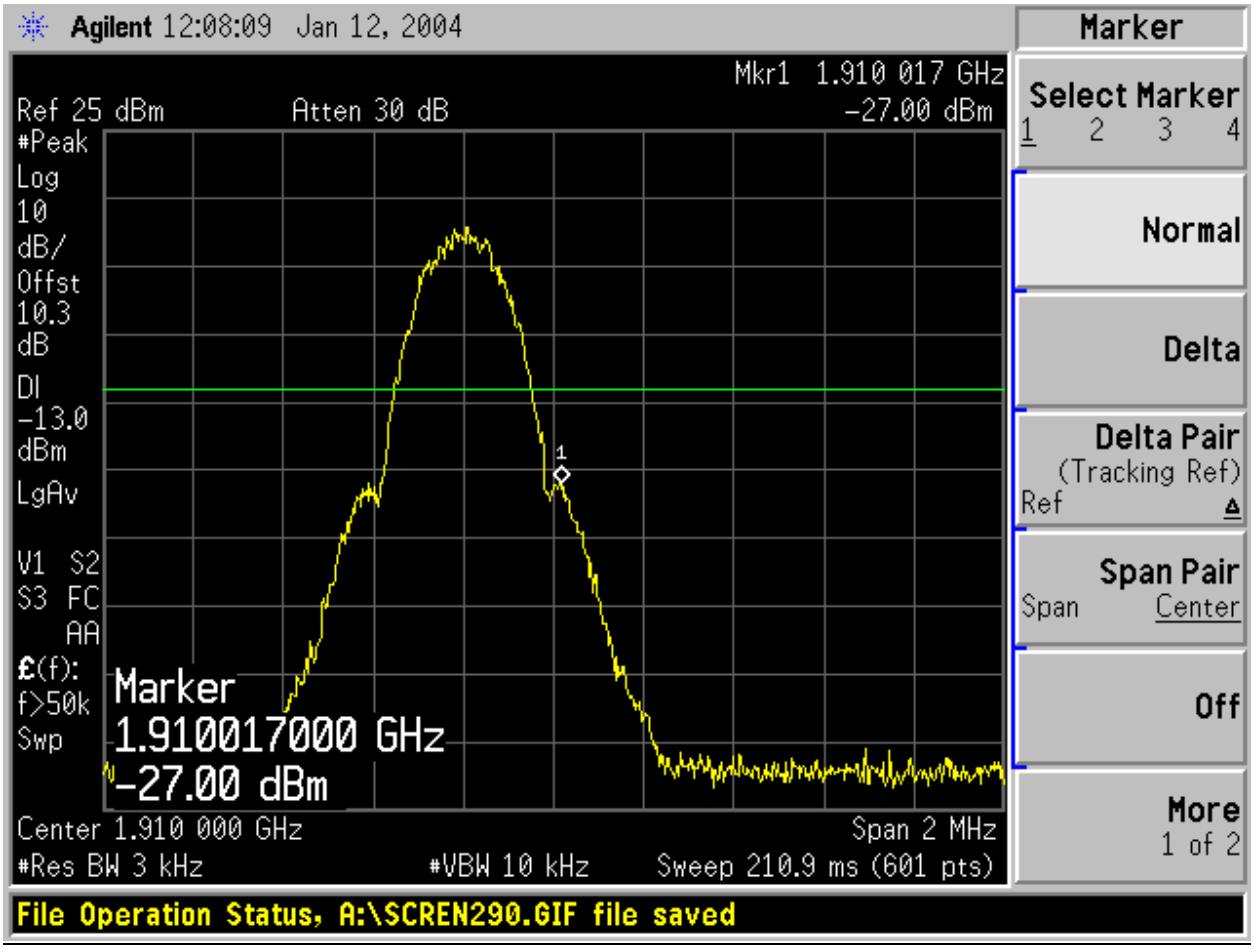
This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

BAND EDGE , GSM, Low Channel:



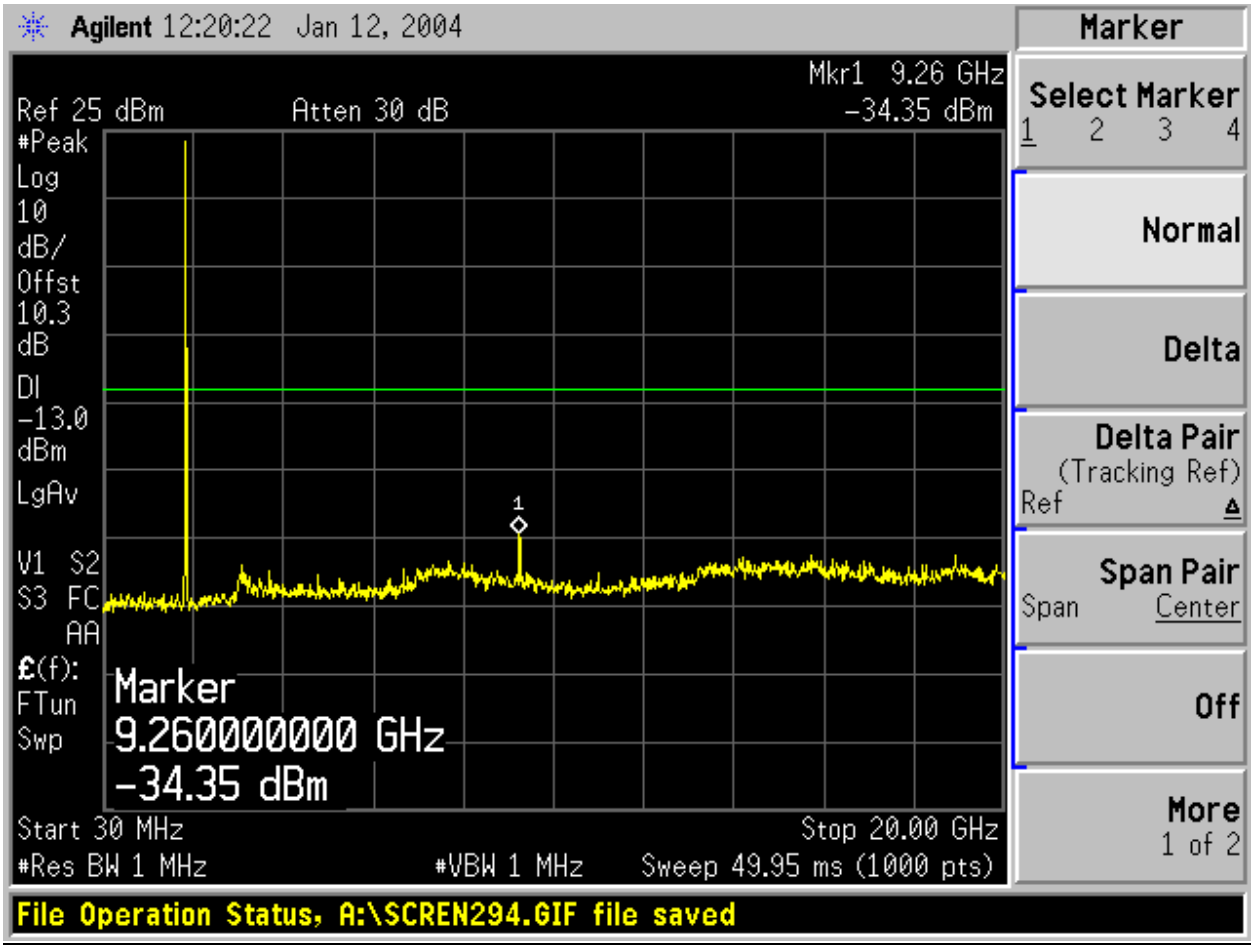
This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

BAND EDGE , GSM, High Channel:



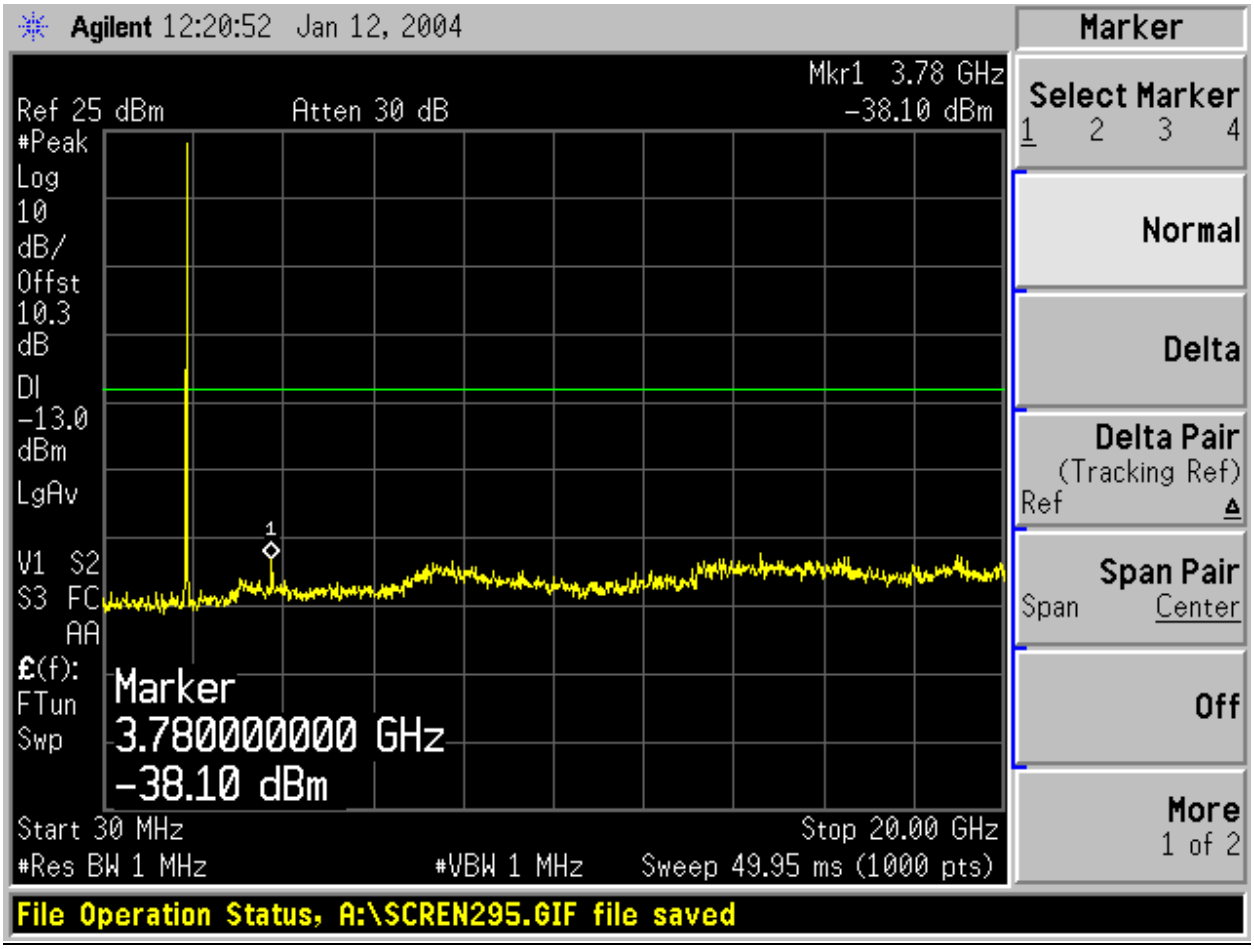
This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

RF Conducted Emissions (30 MHz – 20 GHz), CDMA, Low Channel:



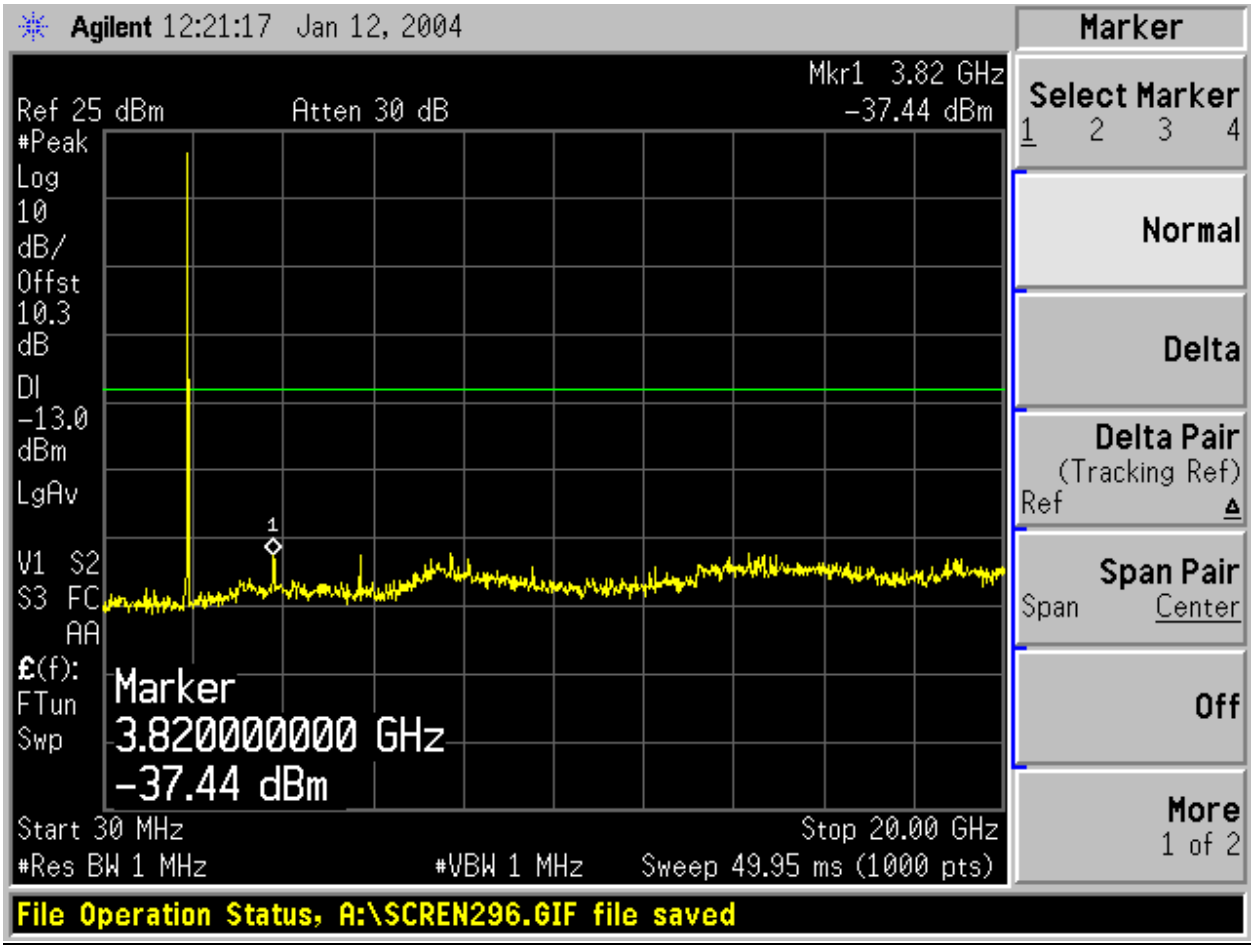
This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

RF Conducted Emissions (30 MHz – 20 GHz), CDMA, Mid Channel:



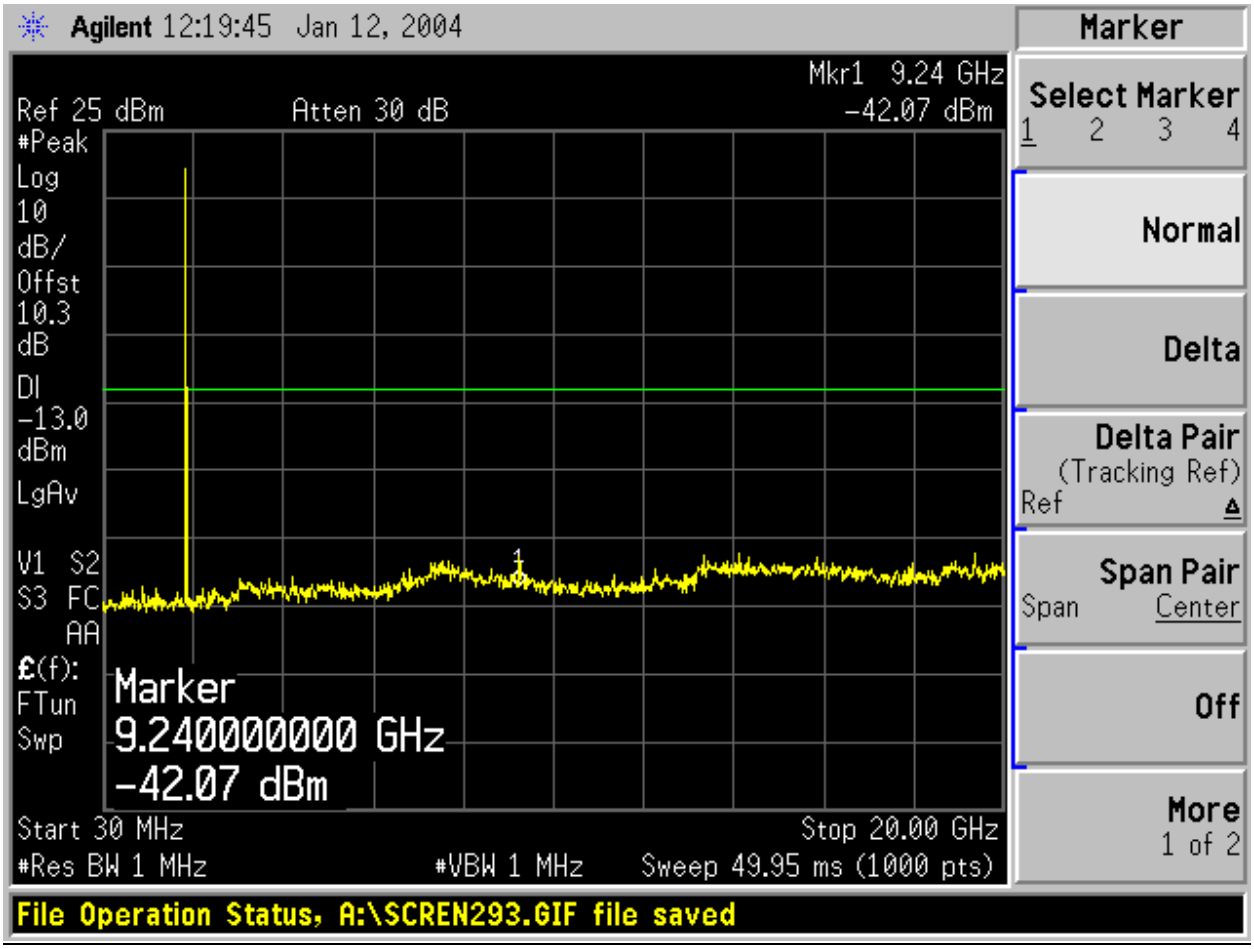
This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

RF Conducted Emissions (30 MHz – 20 GHz), CDMA, High Channel:



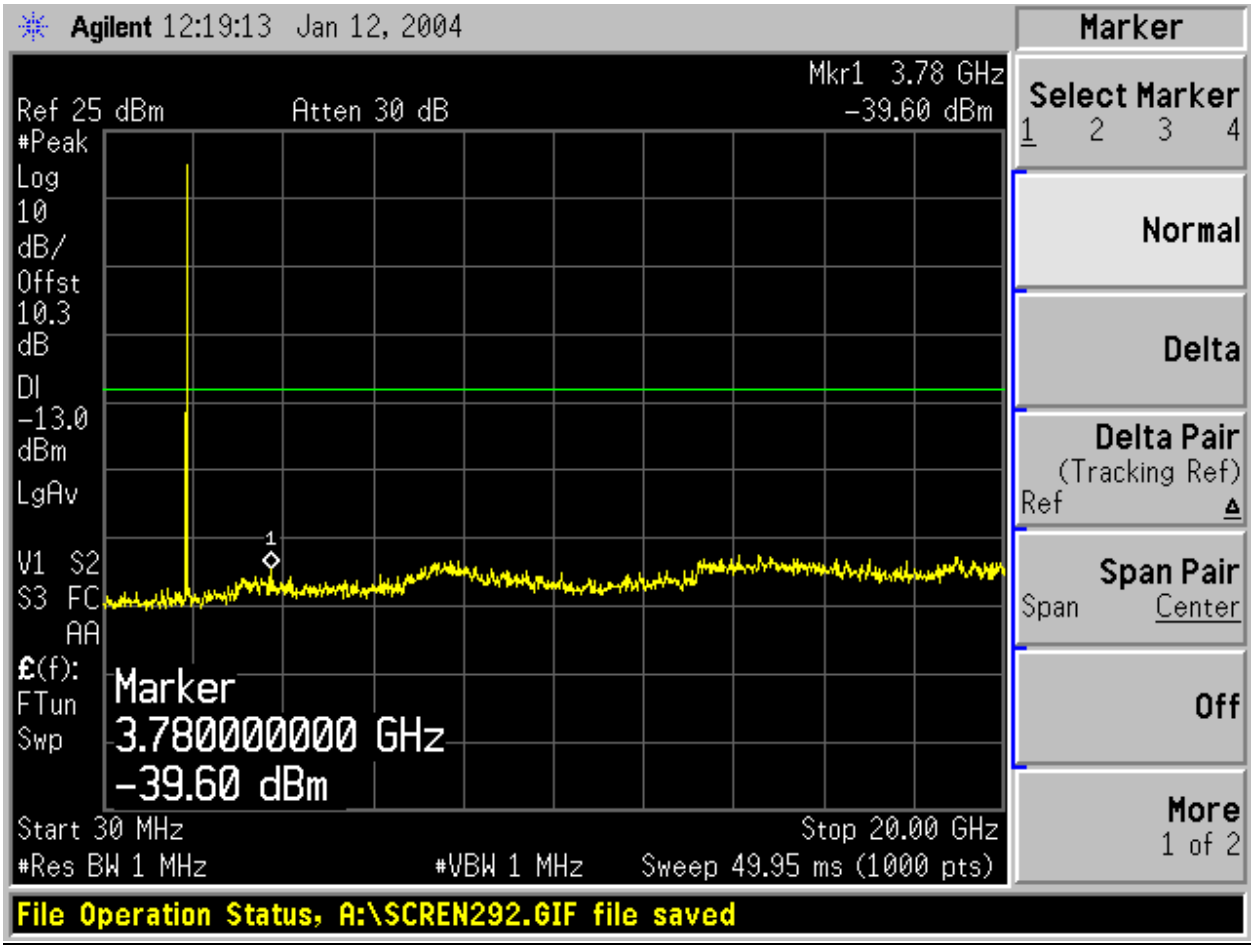
This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

RF Conducted Emissions (30 MHz – 20 GHz), GSM, Low Channel:



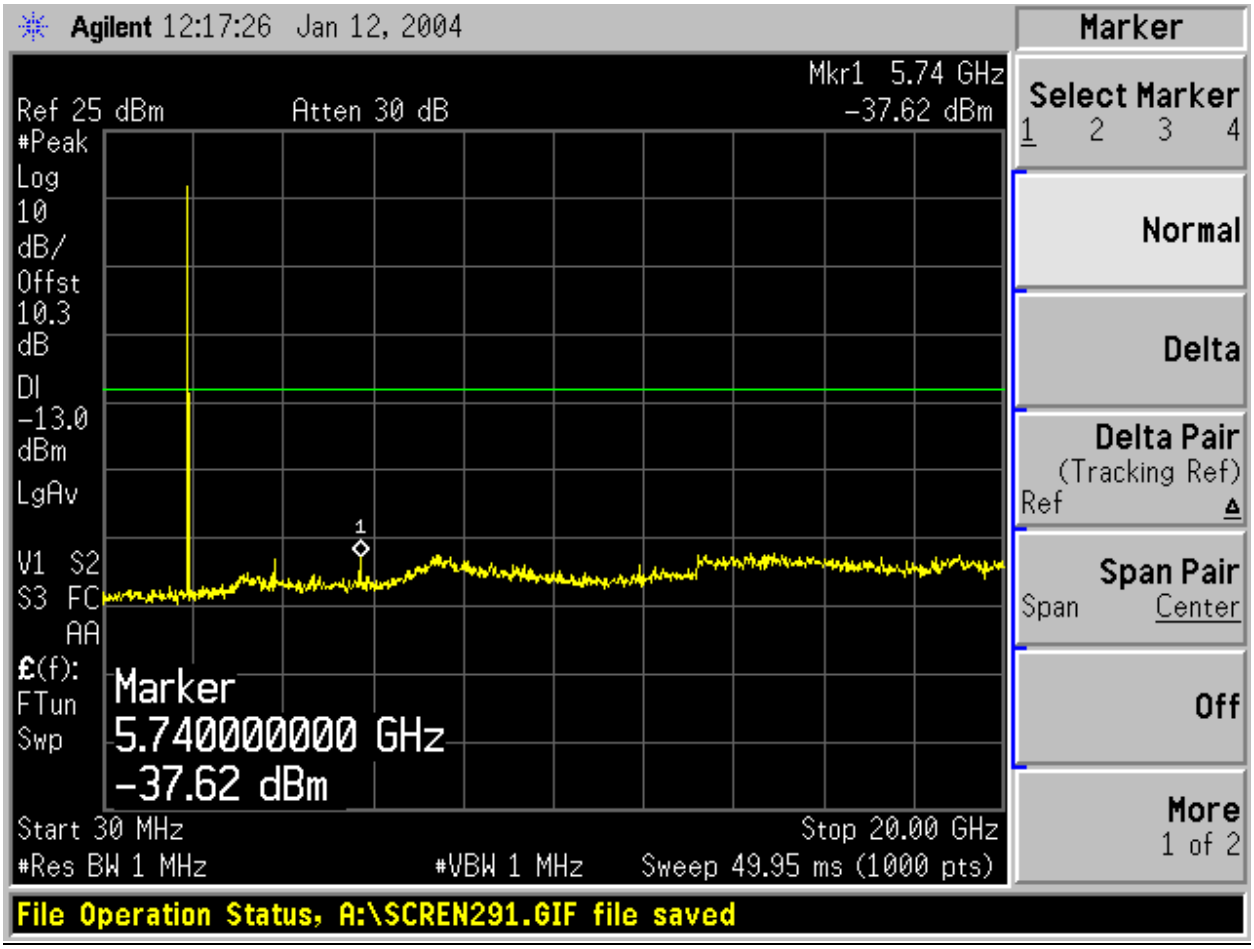
This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

RF Conducted Emissions (30 MHz – 20 GHz), GSM, Mid Channel:



This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

RF Conducted Emissions (30 MHz – 20 GHz), GSM, High Channel:



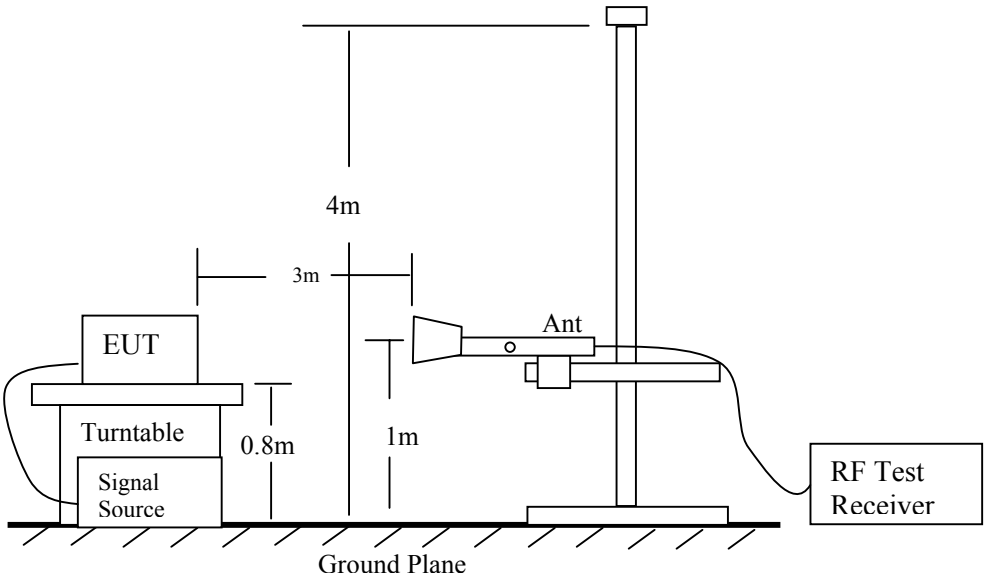
This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

9.5. SECTION 2.1053: FIELD STRENGTH OF SPURIOUS RADIATION

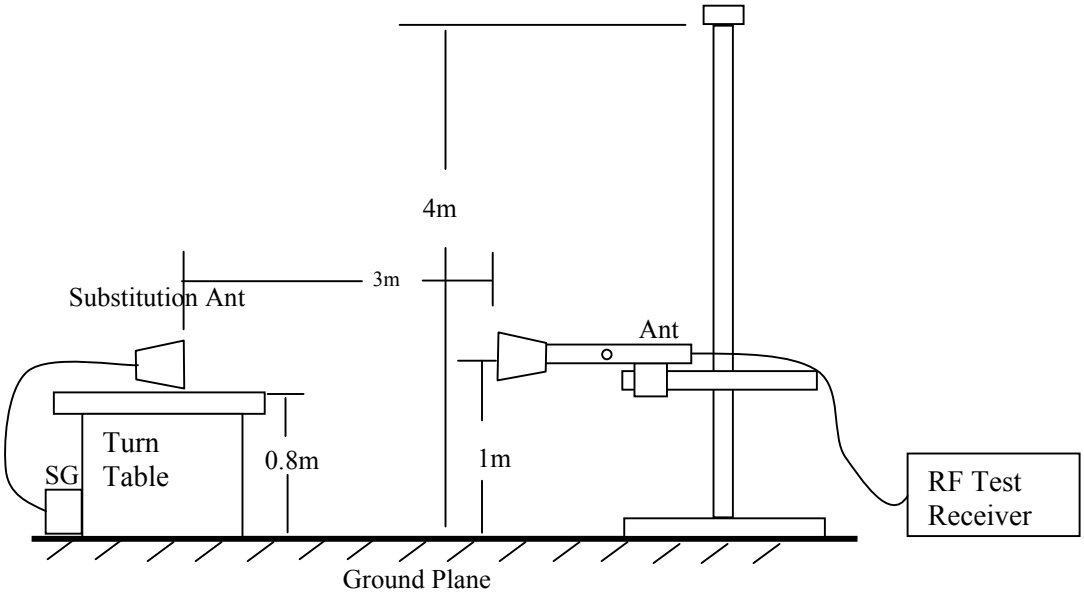
Detector Function Setting of Test Receiver

Frequency Range (MHz)	Detector Function	Resolution Bandwidth	Video Bandwidth
Above 1000	☒ Peak ☐ Average	☒ 1 MHz ☐ 1 MHz	☒ 1 MHz ☐ 10 Hz

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.



Radiated Emission Measurement



Radiated Emission – Substitution Method set-up

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

TEST PROCEDURE

1). On a test site, the EUT shall be placed on a turntable, and in the position closest to the normal use as declared by the user.
2). The test antenna shall be oriented initially for vertical polarization located 1m from the EUT to correspond to the frequency of the transmitter.
3). The output of the test antenna shall be connected to the measuring receiver and either a peak or average detector was used for the measurement as indicated on the report. The detector selection is based on how close the emission level was approaching the limit.
4). The transmitter shall be switched on, if possible, without the modulation and the measurement receiver shall be tuned to the frequency of the transmitter under test.
5). The test antenna shall be raised and lowered through the specified range of height until a maximum signal level is detected by the measuring receiver.
6). The transmitter shall than be rotated through 360° in the horizontal plane, until the maximum signal level is detected by the measuring receiver.
7). The test antenna shall be raised and lowered again through the specified range of height until a maximum signal level is detected by the measuring receiver.
8). The maximum signal level detected by the measuring receiver shall be noted.
9). The transmitter shall be replaced by a substitution antenna.
10). The substitution antenna shall be oriented for vertical polarization.
11). The substitution antenna shall be connected to a calibrated signal generator.
12). If necessary, the input attenuator setting of the measuring receiver shall be adjusted in order to increase the sensitivity of the measuring receiver.
13). The test antenna shall be raised and lowered through the specified range of the height to ensure that the maximum signal is received.
14). The input signal to the substitution antenna shall be adjusted to the level that produces a level detected by the measuring receiver, that is equal to the level noted while the transmitter radiated power was measured, corrected for the change of input attenuation setting of the measuring receiver.
15). The input level to the substitution antenna shall be recorded as power level in dBm, corrected for any change of input attenuator setting of the measuring receiver.
16). The measurement shall be repeated with the test antenna and the substitution antenna oriented for horizontal polarization.
17). The measure of the effective radiated power is the larger of the two levels recorded, at the input to the substitution antenna, corrected for the gain of the substitution antenna if necessary.

MEASUREMENT RESULT

No non-compliance noted, as shown below

9.6. SECTION 2.1055: FREQUENCY STABILITY

No applicable, EUT is an amplifier.

9.7. POWERLINE CONDUCTED EMISSION

Detector Function Setting of Test Receiver

Frequency Range (MHz)	Detector Function	Resolution Bandwidth	Video Bandwidth
150 KHz to 30 MHz	☒ Peak ☐ CISPR Quasi Peak	☒ 9 KHz	☒ 9 KHz

TEST PROCEDURE

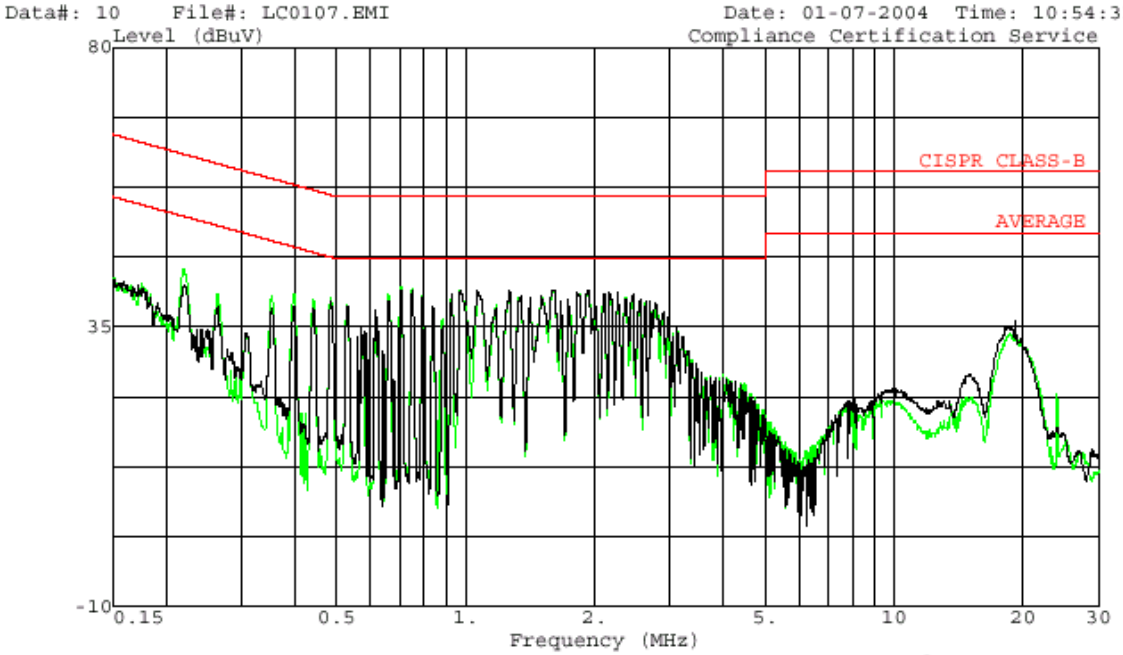
1. The EUT was placed on a wooden table 40 cm from a vertical ground plane and approximately 80 cm above the horizontal ground plane on the floor. The EUT was set to transmit in a continuous mode.

2. Line conducted data was recorded for both NEUTRAL and HOT lines.

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.

MEASUREMENT RESULT

COMPLIANCE Engineering Services, Inc.
561F Monterey Road,
San Jose, CA 95037 USA
Tel: (408) 463-0885
Fax: (408) 463-0888



Trace: 6 Ref Trace:
Project # : 03U2456
Test Operator : Frank Ibrahim
Company : Cellphone- Mate
EUT : Cell Phone Amplifier
Model : CM 1000
Configuration : EUT, Cell phone, 5 dBi Antenna
Mode of Operation: Normal Operation
Target of Test : FCC Class B (Using CISPR 22 Limits)
Voltage : 115Vac/60Hz
: PEAK: L1(BLACK), L2(GREEN)

This report shall not be reproduced except in full, without the written approval of CCS. This document may be altered or revised by Compliance Certification Services personnel only, and shall be noted in the revision section of the document.
