To whom it may concern:

Cellphone-mate Inc. DBA SureCall, hereby requests an existing test report 98759-17_Final P20.pdf and relevant exhibit of an existing Consumer booster + WiFi composite product model: Force 7 as identified by FCCID: RSNFORCE-7 to be used for certification of a new, Consumer booster only product model: Force5 2.0 with new FCCID: RSNFORCE5S

This new product to be identified with FCCID: RSNFORCE5S differs from the originally approved product FCCID: RSNFORCE-7 in the following manor:

- (a) Associated digital circuitry.
There is no change in this part.
- (b) Functional capabilities.
Permanently disable the HDTV subsystem using software;
Permanently turn off RF signal of the wireless router using software, and replace RF-TNC connector with N connector. There is no change in the performance of Band 2, Band 4, Band 5, Band 12, and Band 13.
- (c) Antenna Characteristics.
There is no change in this part.
- (d) Cosmetic differences
Remove the F connectors and for the HDTV subsystem.
Remove the DIP switches for the HDTV and WIFI subsystem.
- (e) Other
There is no other change.

Base on permanently deactivation of WiFi and HDTV capability via software, removal of HDTV antenna and no modification to the booster circuit and functionality, while maintaining all other internal hardware in the RF path intact, I do attest that the Field strength and/or RF Output readings remained the same or are lower than the originally approved product and that they did not increase therefore qualifying this product for this application type.

Sincerely, 

Dennis Findley
Technical Support Manager
