

# RADIO FREQUENCY EXPOSURE REPORT

FOR THE

**Device: Industrial Booster  
Model: Force7**

**Report No.: 96950-22**

**Date of issue: June 6, 2015**

**PREPARED FOR:**

Cellphone-Mate, Inc.  
48346 Milmont Drive  
Fremont CA 94538

**PREPARED BY:**

Daniel Bertran/ Hieu Song Nguyenpham  
CKC Laboratories, Inc.  
5046 Sierra Pines Drive  
Mariposa, CA 95338

The test data contained in this report documents the observed testing parameters pertaining to and are relevant for only the sample equipment tested in the agreed upon operational mode(s) and configuration(s) as identified herein. Compliance assessment remains the client's responsibility. This report may not be used to claim product endorsement by A2LA or any government agencies. This test report has been authorized for release under quality control from CKC Laboratories, Inc.

**Steve Behm**  
*Director of Quality Assurance & Engineering Services*  
*CKC Laboratories, Inc.*

**Purpose:**

To demonstrate compliance with United States, Canada and/or European Union RF Exposure requirements for Portable equipment (devices used  $\leq 20\text{cm}$  from the body) or Mobile equipment (devices used  $>20\text{cm}$  from the body) with power output below exemption levels and Mobile equipment, where Maximum Permissible Exposure (MPE) Calculations apply.

***Device and Antenna Operating Configuration:***

**Booster Portion**

Device operating at maximum output power with continuous transmission of modulated data.

**Outside configuration (Uplink):**

Outside antenna gain (OAG) model number SC-230W: 10dBi

Cable (30') loss model number SC- 400-30N: -2.05dB

**Inside configuration (Downlink):**

Inside antenna gain (IAG) model number SC-222W: 6dBi

Cable (75') loss model number SC- 400-75: -4.22dB

**Wifi Portion**

The EUT is in continuous transmit mode.

The EUT has 11 channels, 1 through 11 for B, G, N (Span=20MHz) Mode.

The EUT has 7 channels, 3 through 9 for N (Span=40MHz) Mode.

The EUT is setup in typical mounting configuration.

1/Wifi Antenna: Model: SC-222W: 6dBi

2/Cable (75') for Wifi Antenna to the EUT: Model: SC- 400-75: -10dB

***Test Procedure:***

**Booster Portion**

This equipment is evaluated in accordance with the guidelines set forth in OET Guide 65 & ANSI C95.1 for the US, Health Canada Safety Code 6 & RSS 102 for Canada and EN 62479 or EN 62311 for EU.

**Wifi Portion**

This equipment is evaluated in accordance with the guidelines set forth in OET Guide 65 & ANSI C95.1 for the US and Health Canada Safety Code 6 & RSS 102 for Canada.

***Other Considerations:***

Report considers stand-alone configurations only. Simultaneous transmissions are not evaluated. RF Exposure limits are calculated at the mid-point of the operating band.

***Referenced Test Reports:***

The following test reports were referenced in conjunction with this assessment:  
96950-13, 96950-14, 96950-15 and 96950-16

## RF Exposure Assessment

### Applicability:

<i>Limit Used</i>	<input checked="" type="checkbox"/>	General Population / Uncontrolled Exposure
	<input type="checkbox"/>	Occupational / Controlled Exposure

### Equipment operational details:

<i>Config #</i>	<i>Operating Frequency (MHz)</i>	<i>Measured Output Power (dBm)</i>	<i>Antenna Gain (dBi)- Cable Loss (dB)</i>	<i>Antenna Type / Configuration</i>	<i>EIRP (dBm)</i>
1 (Uplink)	707MHz	20.7	10-2.05	Directional / Outside	28.65
2 (Downlink)	881.5MHz	21.9	3-4.41	Directional / Inside	20.49
3 (Wifi)	2412MHz	23.86	6-10.0	Directional	19.86

### MPE Calculation:

$$Power\ Density = \frac{EIRP}{4\pi d^2} \quad \text{Given: EIRP in mW or W and d in cm or m}$$

<i>Config #</i>	<i>Distance (cm)</i>	<i>US (1.1310)</i>		<i>Canada (RSS-102)</i>		<i>EU (ICNIRP)</i>	
		<i>Power Density (mW/cm<sup>2</sup>)</i>	<i>Limit (mW/cm<sup>2</sup>)</i>	<i>Power Density (W/m<sup>2</sup>)</i>	<i>Limit (W/m<sup>2</sup>)</i>	<i>Power Density (W/m<sup>2</sup>)</i>	<i>Limit (W/m<sup>2</sup>)</i>
1	20	0.15	0.47				
2	20	0.02	0.59				
3	20	0.02	1.0				

## Summary

### *Exemptions:*

In the case the equipment meets compliance requirements by exemption the product is approved for stand-alone use under mobile or portable conditions without further evaluation. Exemption requires any additional collocation or simultaneous transmission requirements (including necessary separation distances) have been met according to the intended use of the equipment.

### *MPE Calculation Results:*

In the case the equipment meets compliance by MPE Calculations the product is approved for use under mobile conditions without further testing under the condition that any additional collocation or simultaneous transmission requirements (including necessary separation distances) have been met. It is assumed that the manufacturer shall design the equipment such that the minimum separation distance of 20cm (or greater, as listed above) is met or that the manufacturer provides a protection guide (or installation instructions) to the end user such that the antenna(s) may be installed in accordance with the manufacturer's instructions in such a manor to maintain the minimum separation distance.

### *General Comments:*

The Absorption and distribution of Electromagnetic energy in the body is a very complex phenomena that depends on the mass, shape and physiological condition of the body; the orientation of the body with respect to the fields; and, the electrical properties of the body and the environment. Variables that may play a substantial role in possible biological effects are those that characterize the environment (including but not limited to: ambient temperature, air velocity, relative humidity and body insulation); and those that characterize the individual (including but not limited to: age, gender, activity level and existing debilitation or disease). Because innumerable factors may interact to determine specific biological effects of exposure to electromagnetic fields, any protection guide should consider both intended and unintended operational environments and provide guidance for installation and use of the product such that proper separation distances can be maintained. (ANSI C95.1)

## RF Exposure Limits

### United States Compliance Requirements (1.1310):

#### *RF Exposure Evaluation Limits Occupational / Controlled Exposure*

Frequency Range (MHz)	Electric Field Strength (V/m)	Magnetic Field Strength (A/m)	Power Density (mW/cm <sup>2</sup> )	Averaging Time (minutes)
0.3-3.0	614	1.63	*(100)	6
3.0-30	1842/f	4.89/f	*(900/f <sup>2</sup> )	6
30-300	61.4	0.163	1	6
300-1500	---	---	f/300	6
1500-100,000	---	---	5.0	6

#### *RF Exposure Evaluation Limits General Population / Uncontrolled Exposure*

Frequency Range (MHz)	Electric Field Strength (V/m)	Magnetic Field Strength (A/m)	Power Density (mW/cm <sup>2</sup> )	Averaging Time (minutes)
0.3-1.34	614	1.63	*(100)	30
1.34-30	824/f	2.19/f	*(180/f <sup>2</sup> )	30
30-300	27.5	0.073	0.2	30
300-1500	---	---	f/1500	30
1500-100,000	---	---	1.0	30

\* Plane wave equivalent power density

Limit is calculated based on the mid-band frequency used in the operating frequency range.

### Stand-Alone Evaluation Exemption Levels:

In accordance with KDB 447498 D01 v05r02

Frequency (MHz)	Max Output Power at Exemption Limit (mW)	
	$d \leq 50\text{mm}$	$50\text{mm} < d \leq 20\text{cm}$
<100	$\frac{1}{2} \cdot \left( \frac{R \cdot 50}{\sqrt{0.1}} \right) \cdot \left( 1 + \text{LOG} \left( \frac{100}{f_{\text{MHz}}} \right) \right)$	$\left( \frac{R \cdot 50}{\sqrt{0.1}} + (d - 50) \frac{100}{150} \right) \cdot \left( 1 + \text{LOG} \left( \frac{100}{f_{\text{MHz}}} \right) \right)$
100-1500	$\left( \frac{R \cdot d}{\sqrt{f_{\text{GHz}}}} \right)$	$\left( \frac{R \cdot 50}{\sqrt{f_{\text{GHz}}}} + (d - 50) \frac{f_{\text{MHz}}}{150} \right)$
1500-6000		$\left( \frac{R \cdot 50}{\sqrt{f_{\text{GHz}}}} + (d - 50) \cdot 10 \right)$

R is the allowed ratio: 3 for 1-g SAR and 7.5 for 10-g extremity SAR.

d is distance in mm, rounded to the nearest mm.

**Canadian Compliance Requirements (RSS-102):**
