RE: TUNING AND QUALITY CONTROL

To Whom It May Concern:

BOBCO TECHNOLOGY LIMITED will continue to manually and individually tune and confirm power output of all transmitter devices manufactured and approved under FCC ID# RSO-8939 in 2004, as was done for the same previously-approved device under FCC ID# Q9N-AAT in 2003.

Tuning and power output testing are accomplished using a digital frequency counter and/or spectrum analyzer on a one-on-one basis with each individual transmitter prior to final assembly and delivery to our customers.

This procedure is also required by all of our customers to ensure Quality Control (QC) and the precise frequency and power output of each transmitter so that there are no defectives shipped out nor returns later on.

Sincerely,

A handwritten signature in black ink that reads "Raymond Lee". The signature is written in a cursive style and is positioned above a horizontal line.

Raymond Lee, Director
