**Overall Assessment Letter for Ezze MEGA6
FCC id: RV2MEGA6**

I have reviewed this composite application and find it compliant. This is an application for a mobile phone supporting GSM/GPRS/EDGE 850/1900 and Bluetooth. Since the mobile phone also has a USB port for connection to Computers a filing for a Class B peripheral has also been made. The phone additionally supports GSM 900/1800, however are not relevant as they are not supported in North America.

The Bluetooth conducted output power is less than 24mW and the max sum 1g SAR for GSM and BT was less than 1.6W/kg. Therefore, simultaneous transmission SAR assessment was deemed as not being required. I underwent the FCC RF exposure training at the FCC TCB Workshop in October 2008.

As a result of the assessment review, the SAR report was updated to include Bluetooth stand-alone SAR tests since the GSM and BT antennas were within 2.5cm of each other and the GSM SAR was > 1.2 W/kg. The Part 15C report was amended to correct typographical errors related to the FCC ID. The Part 15B and Part 22/24 reports were updated to demonstrate compliance according to the latest FCC rules. The SAR report was updated to insert a plot for PCS1900 showing the maximum SAR plot.

Yours sincerely
