Subject: B3 Requirements

Mark ,

I have reviewed the previous e-mails and given further consideration over the issue of SAR.

In consideration

- that the maximum power level is 5W at 162 MHz;
- the equipment is press-to-talk giving a resultant duty factor of 50%;
- that the equipment will be installed in a Occupational Use environment;
- that the equipment will be operated \geq 2.5 CMs from the head

I have concluded that it falls below the "low" threshold for SAR evaluation and consequently does not require SAR evaluation.

Best Regards

Hilton Carr
