Subject: U-NII Band restriction for XBRG-1140 in grant family FCC ID: RV7-5G1100

To Whom it may concern,

On the RV7-5G1100, the RF parameters: frequency selection, transmit power level and radar detection mode, are controlled by a choice of predefined regions, which allow specific values for that country and region. The available regions are determined by the country code. U.S.-sold devices default to the US country code, and permit only country codes with equivalent regulations (e.g. US, Canada, Puerto Rico). On the added product to the grant, the XBRG-1140, the U-NII bands are software disabled for all country codes, allowing only the DTS band 5725-5850 MHz.

Sincerely,

A handwritten signature in blue ink that reads "Daniel" followed by a stylized set of initials.
