## FCC ID: RVBXSC200

According to KDB 447498 D01 General RF Exposure Guidance v05r02, section 4.3.1

At 100 MHz to 6 GHz and for test separation distances  $\leq$  50 mm, the SAR test exclusion threshold is determined according to the following

[(max. power of channel, including tune-up tolerance, mW) / (min. test separation distance, mm)]  $x \left[ \sqrt{f_{\text{(GHz)}}} \right] \leq 3.0$ 

## 1. SAR test exclusion threshold

Frequency : 2 480 MHz (min. separation distances = 5 mm) SAR test exclusion thresholds(5 mm) = 3 x 5 / ( $\sqrt{2.480}$ ) = 9.525 mW

Max. tune-up	SAR Test Exclusion
tolerance(mW)	Thresholds(5 mm) (nW)
3	9.525

Calculation value : 3 (mW) / 5 (mm) x  $\sqrt{2.480} = 0.945$ 

So, Calculation value ≤ 3.0

2. Conclusion : No SAR is required.
