02/26/2004

To Whom Concerned:

This letter is to certify that the design changes made to the WESROC RMS Transmitter (Model MT-9100T) during FCC Part 15 testing at Intertek in Oakdale, MN on 02/19/2004 will be fully implemented on all devices produced. The changes to the PCB assembly were as follows.

- 1) Resistor R10 was changed from 20.0k ohms to 15.0k ohms.
- 2) Resistor R12 was changed from 4.99k ohms to 2.43k ohms.
- 3) Capacitor C19 (3300pF) was added to the assembly.

The changes were made to reduce the transmit power of the device to be within legal limits.

Sincerely,

A handwritten signature in black ink that reads "James Fangmeier".

James Fangmeier  
MT-9100T Project Leader
