# ANTENNA Approval Sheet

Revision: A

Part No: APDR-600WT, APDR-600WS

## 1.REVISION HISTORY

No.	Date	Before	After	Revision	Rev

## 2. Feature And Applications

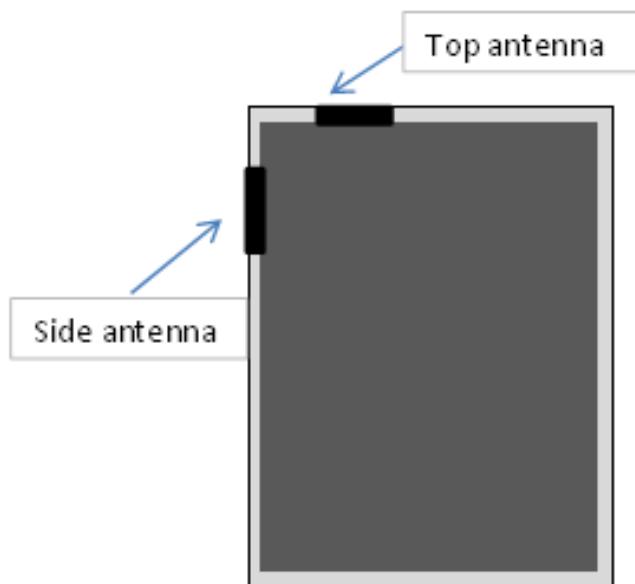

This PCB antenna is applied to 2.4/5 GHz wifi band applications

## 3. CODE NO.

CODE NO. :

CUSTOMER PART NO. :

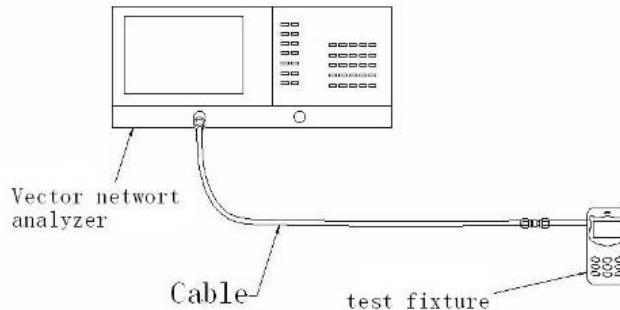

## 4. TEST METHOD

### 4.1 Test Method of Production

In mass production it is not practical to use the handset supplied by customer. Pincraft will design a production test fixture for use on the processes that require electrical testing. The results of the test fixture will be correlated to the results obtained on the customer handset.

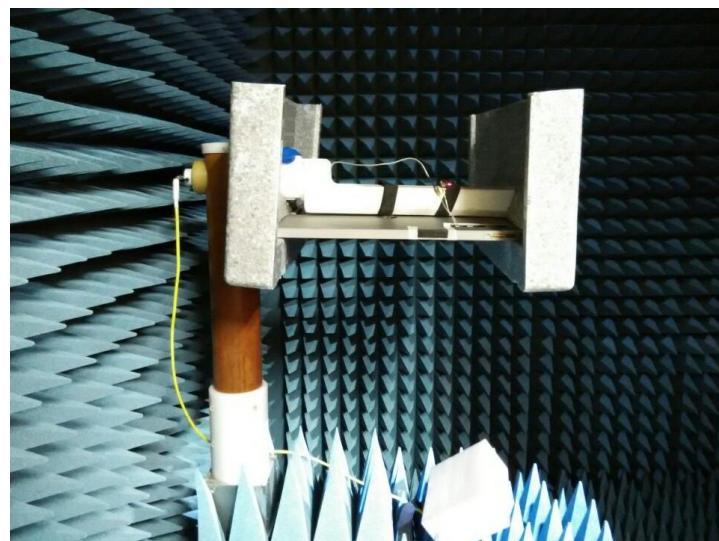

## 4.2 The measurement of Frequency and VSWR

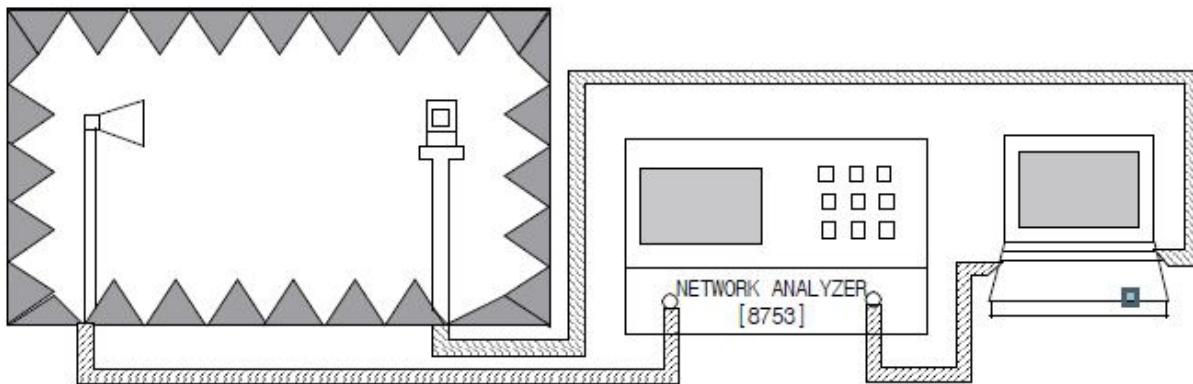

### <Measurement Method>

- 1) As seen the above, network analyzer is set up for S11 measurement.
- 2) The measurement frequency range is to set up from 1.5 GHz to 6.5 GHz.
- 3) Perform S11 one port full calibration.
- 4) Measure the VSWR of Wifi frequency range.

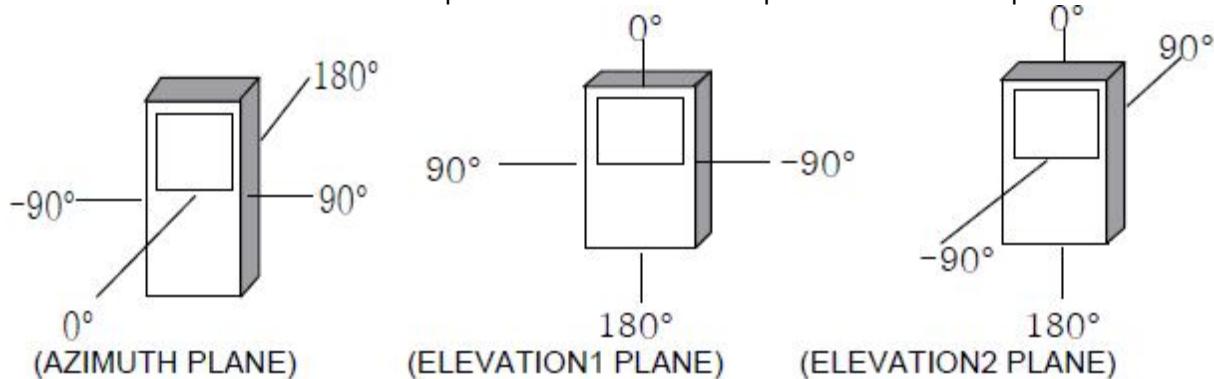

## 4.3 The measurement of Gain and Radiation Patterns

<Measurement Method>

- 1) As seen the above, network analyzer is to set up in Anechoic chamber.
- 2) As seen the beneath, for the measurement planes as Azimuth, Elevation1, and Elevation2, measure Gain data of vertical polarization and horizontal polarization for each plane.

#### 4.4 Test Jig VSWR

The antenna is tested while mounted on the test jig. Test fixture should be positioned at a distance of 20Cm away from network analyzer at least.

"VSWR deviation can be occurred by the variation of N/A(network analyzer), RF Jig and so on, therefore each Markers(frequency) on the VSWR should be adjusted by the value of the Master sample."

## 8. Coaxial Micro-Plug

The GigaLane's **Coaxial Micro-Plugs (CMP) and Receptacles (CMJ)** are specially designed for Space Reduction on Circuit Boards and for Vertical Mounting on RF Boards. They have the excellent RF performance on the right angle transitions **up to 6 GHz**.

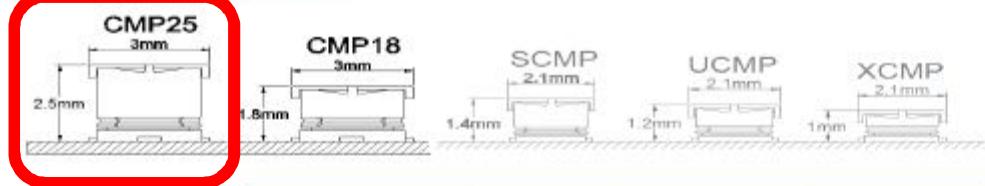

### Features

- DC to 6 GHz (VSWR <1.5 Max.)
- Cable assembly of 0.81mm, 1.13mm, 1.30mm, 1.37mm
- Cable Mated heights of 1.80 mm and 2.50 mm
- Connector Mated heights of 1.25 mm and 1.3 mm
- Fully compatible with Hirose U.FL and I-PEX MHF series
- Vertical mounting on receptacle (SMT)

## 10. PACKAGING

PINCRAFT ENGINEERING Inc. Packing Spec.					
Customer: DR TECH		Project: F600		Number: -	Issued:
Packing dimension	Number	Part name	Spec	Q' ty	product draw
		PP tray	550*370*13mm/case	30/900	
		BOX	565*385*340mm	1/900	
		VINYL	600*400*14mm	1/900	
Operation step	1. Prepare the packaging material in the work place. 2. Packaging, one put 1 PCS, 30 PCS/tray, tray 180° staggered stacked, each group of 900PCS, 3. 1 set each, a total of 900 PCS. After full box, with transparent tape sealing, 4. The right place each tray need to paste the model label. 5. Request packaging before operation, be sure to carefully review each layer tray products, Prevent shipment shortage weight.				Tags
Points of Attention	1. Operator should wear gloves. 2. Note that the number of packing, not more loaded and less loaded. Manssia box shall be marked (i.e., upper left side of the carton labeled green 'manssia' tags to distinguish.) 3. Cartons can not be stacked too high (three or less) to prevent stress deformation.
