

# Dimension of shielding case

Unit : mm

# LASER marking for EYSGJN (RYYEYSGJN, 4389B-EYSGJN)

## Marking of ID number

It is impossible to put a label on this very small metal shielding case. Therefore the marking of model number and customer code is written by LASER marker. It needs to consider about alignment accuracy as well. The traceability requirement in quality control under ISO standard is secured by the Lot number, the Model number and customer code marking on each product. The marking can be not removed by our company regulation for product management. Putting on this together, marking of ID number on this shielding case with 4.4mm width is impossible.

Accordingly, the certification ID indication is printed on the manual supplied with the device. FVIN(for IC) is shown on the label.

**LASER marking for EYAGJN** (RYYEYAGJN, 4389B-EYAGJN)
