Test Report

Test Report No.:	KTI04EF04003				
Registration No.:	99058				
Applicant:	Atelsystech.Inc				
Applicant Address:	#907/9F Geumgang High Te	ech Valley, 133-1, Sa	ngdaewon-dong		
	Jungwon-gu, Seongnam Ci	ty, Gyeonggi-do, Ko	orea		
Product:	MP3 Player				
FCC ID:	RZ7xlim	Model No.	xlim		
Receipt No.:	04-0324	Date of receipt:	March 23, 2004		
Date of Issue:	April 16, 2004				
Testing location	Korea Technology Institute Co., Ltd.				
resting location	51-19, Sanglim3-Ri, Docheok-Myeun, Gwangju-Shi, Gyeungki-Do, Korea				
Test Standards:	FCC/ANSI. C63.4: 2001	FCC/ANSI. C63.4: 2001			
Rule Parts: FCC	Part 15, Class B	Part 15, Class B			
Equipment Class:	Computing Device Peripheral				
Test Result:	The above-mentioned prod	The above-mentioned product has been tested with compliance.			
Tested by	y: E.S.Park	Approved by: G. C. Min /President			
	/ Engineer		/1 163luciit

Korea Technology Institute Co., Ltd.

Page 3 of 13

1. General

This equipment has been shown to be capable of compliance with the applicable technical standards and was tested in accordance with the measurement procedures as indicated in this report.

We attest to the accuracy of data. Korea Technology Institute Co., Ltd. performed all measurements reported herein. And were made under Chief Engineer's supervisor.

We assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

2. Test Site

Korea Technology Institute Co., Ltd.

2.1 Location

51-19, Sanglim3-Ri, Docheok-Myeun, Gwangju-Shi, Gyeungki-Do, Korea

The Test Site is in compliance with ANSI C63.4/2001 for measurement of radio Interference.

Korea Technology Institute Co., Ltd.

3. Description of the tested samples

The EUT is MP3 Player.

3.1. Rating and Physical Characteristics

Item	Detail	Specification		
	Channel	Stereo		
	Frequency	20Hz – 20,000Hz		
	Audio Output	5mW(R) + 5mW(L)16 Earphone(Max)		
Audio	Format	Mpeg 1/2/2.5 Audio Layer3		
	Play Time	8Hours(Typ.)		
	Memory	64MB / 128MB / 256MB		
	Voice Recording	8Hours(Min.)		
PC Interface	System	Windows98/2000/ME/XP/NT/Mac OS(over 9.x)		
Dawer	Battery	Rechargeable Li-ion		
Power	Battery Charge	USB Port		
	USB Interface	USB 1.1(5Mbps Max.)		
General	Size	43(W) x 43(H) x 11.5(D)		
	Weight	18.5g

4. Measurement Conditions

Testing Input Voltage: AC 220V

4.1 Modes of Operation

The EUT was in the following operation mode during all testing;

1) File transfer each disk.

4.2 Additional Equipment

DEVICE TYPE	Manufacturer	M/N	S/N	FCC ID
PC	Compaq computer Corp.	ARMADA M700	3J14FmpzBD2C	-

4.3 Uncertainty

1) Radiated disturbance

Uc (Combined standard Uncertainty) = ± 1.8dB

Expanded uncertainty U=KUc

$$K = 2$$

$$U = \pm 3.6dB$$

2) Conducted disturbance

$$Uc = \pm 0.88dB$$

$$U = KUc = 2 \times Uc = \pm 1.8dB$$

5. EMISSION Test

5.1.Conducted Emissions

Result: Pass

The line-conducted facility is located inside a 2.3M x 3.5M x 5.5M shielded closure.

The shielding effectiveness of the shielded room is in accordance with MIL-Std-285 or NSA 605-05. A 1m x 1.5m wooden table 80cm high is placed 80cm away from the conducting ground plane and 40cm away from the sidewall of the shielded room. Electro-Metroics Model EM-7823 (9kHz-30MHz)50ohm/50 uH Line-Impedance Stabilization Networks (LISN) are bonded to the shielded room.

The EUT is powered from the Electro-Metroics LISN and the support equipment is powered from the Kyoritsu LISN. Power to the LISN are filtered by a high-current high-insertion loss shield enclosures power line filters (100dB 14kHz-1GHz).

The purpose of the filter is to attenuate ambient signal interference and this filter is also bonded to the shielded enclosure.

All electrical cables are shielded by copper pire with inner diameter of 1".

If the EUT is a DC-Powered device, power will be derived from the source power supply it normally will be powered from and this supply lines will be connected to the Rohde & Schwarz LISN.

All interconnecting cables more than 1 meter were shortened by non-inductive bundling (serpentine fashion) to a 1-meter length.

Sufficient time for the EUT, Support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition. The RF output of the LISN was connected to the spectrum analyzer to determine the frequency producing the maximum EME from the EUT. The spectrum was scanned from 150kHz to 30MHz with 100msec. Sweep time.

The frequency producing the maximum level was reexamined using EMI field Intensity meter (ESPC). The detector function was set to CISPR quasi-peak mode.

The bandwidth of the receiver was set to 10kHZ. The EUT, support equipment, and interconnecting Each emission was maximized by: switching power lines; varying the mode of operation or resolution; clock or data exchange speed; if applicable; whichever determined the worst-case emission.

Photographs of the worst-case emission can be seen in photograph of conducted test. Each EME reported was calibrated using self-calibrating mode.

Table 2: Test Data, Conducted Emissions

Frequency (MHz)	(1) Reading (dBμV)	Line	(2) Limit (dBµV)	(3) Margin (dB)
0.15	41.14	L2	66.00	24.86
0.20	39.82	L2	63.61	23.79
0.23	39.80	L2	62.45	22.65
0.28	38.39	L1	60.82	22.43
15.32	37.89	L2	60.00	22.11
16.08	45.23	L2	60.00	14.77

NOTES:

- All modes of operation were investigated
 And the worst-case emissions are reported.
- 2. All other emissions are non-significant.
- 3. All readings are calibrated by self-mode in receiver.
- 4. Measurements using CISPR peak mode.
- 5. L1 = LINE-PE, L2 = NEUTRAL-PE
- 6. C/F = Correction Factor
- 7. C/L = Cable Loss
- 8. The limit for Class B digital device is 66dBuV to 56dBuV from 150KHz to 500KHz, 56dBuV from 500KHz to 5MHz, 60dBuV Above 5MHz.

Margin Calculation

(6) Margin = (2) Limit - (1) Reading

Korea Technology Institute Co., Ltd.

Page 12 of 13

5.2 Radiated Emissions

Result: Pass

Preliminary measurements were made indoors at 1 meter using broadband antennas, broadband Amplifier, and spectrum analyzer to determine the frequency producing the maximum EME. Appropriate precaution was taken to ensure that all EME from the EUT were maximized and Investigated. The system configurations, clock speed, mode of operation or video resolution, turntable azimuth with respect to the antenna were noted for each frequency found. The spectrum was scanned from 30 to 2000 MHz using BiconiLog Antenna. About 2GHz, Double ridged horn Antenna was used.

Final measurements were made outdoors at 10-meter test range using EMCO antennas. The test equipment was placed on a wooden table situated on a 4x4 meter area adjacent to the measurement area. Turntable was to protect from weather in the dome that made with Polyethylene film. Sufficient time for the EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition. Each frequency found during pre-scan measurements was re-examined and investigated using EMIField Intensity Meter (ESIB40) R & S. The detector function was set to CISPR quasi-peak mode and the bandwidth of the receiver was set to 120kHz or 1 MHz depending on the frequency or type or signal.

The half-wave dipole antenna was tuned to the frequency found during preliminary radiated Measurements. The EUT, support equipment and interconnecting cables were re-configured to the set-up producing the maximum emission for the frequency and were placed on top of a 0.8meter high non-metallic 1 x 1.5 meter table.

The EUT, support equipment, and interconnecting cables were re-arranged and manipulated to maximize each EME emission. The turntable containing the system was rotated; the antenna height was varied 1 to 4 meters and stopped at the azimuth or height producing the maximum emission. Each emission was maximized by: varying the mode of operation or resolution; clock or data exchange speed, and/or support equipment, if applicable; and changing the polarity of the antenna, whichever determined the worst-case emission.

Photographs of the worst-case emission can be seen in photograph of radiated emission test. Each EME reported was calibrated using self-calibrating mode.

Korea Technology Institute Co., Ltd.

Table. Radiated Measurements at 3-meters

Notes: 1.All modes of operation were investigated.

And the worst-case emission are reported.

- 2.All other emission is non-significant.
- 3.All readings are calibrated by self-mode in receiver.
- 4. Measurements using CISPR quasi-peak mode.
- 5.AFCL = Antenna factor and cable loss
- 6.H = Horizontal, V = Vertical Polarization
- 7. The limit for Class B digital device is 100 uV (40 dBuV) from 30 MHz to 88 MHz,
- 150 uV (43.5dBuV) from 88MHz to 216MHz, 200uV(46dBuV) from 216MHz to 960MHz and 500 uV (54dBuV) from above 960MHz.

Margin Calculation

(5) Margin = (4) Limit - (3) Actual

[(3) Actual = (1) Reading + (2) AFCL]
