GENERAL_INFORMATION

2.1033(c) BRUNSWICK NEW TECHNOLOGIES-MARINE ELECTRONICS will sell the FCC ID: S2UNS100US VHF Marine transmitter in quantity, for use under FCC RULES PART 80.

2.1033(c) **TECHNICAL_DESCRIPTION**

(4) Type of Emission: 16K0G3E/16K0F3E

Bn = 2M + 2DK
M = 3000
D = 4.6KHz (Peak Deviation)
K = 1
Bn = 2(3.0K) + 2(4.6K)(1) = 6.0K + 10.0 = 16.0K

80.205 (a) ALLOWED AUTHORIZED BANDWIDTH = 20.00KHz.

2.1033(c)(6) Frequency Range: 156.025 – 157.425 MHz

2.1033(c)(7) Power Range and Controls: There is a user Power switch for High/Low Power. Maximum Output Power Rating: High (25) Watts, (1) Watt into a 50 ohm resistive load.

2.1033(c)(8) DC Voltages and Current into Final Amplifier:

POWER INPUT
FINAL AMPLIFIER ONLY

High	Low
Vce = 13.6 Volts	Vce = 13.6 VDC
Ice = 5.28 A	Ice = 1.28 A
Pin = 71.81 Watts	Pin = 17.41 Watts

Function of each electron tube or semiconductor device or other active circuit device is included in the parts list exhibit.

TIMCO ENGINEERING INC.
849 NW State Road 45
Newberry, Florida 32669
http://www.timcoengr.com
888.472.2424 F 352.472.2030 email: sid@timcoengr.com

2.1033(c)(9) Complete Circuit Diagrams: The circuit diagrams and block diagrams are included.

2.1033(c)(10) Instruction book. The instruction manual is included.

2.1033(c)(11) Tune-up procedure. The tune-up procedure is included.

Description of all circuitry and devices provided for determining and stabilizing frequency is included in the circuit description

2.1033(c)(11) Digital modulation. This unit does NOT use digital modulation.

The data required by 2.1046 through 2.1055 is submitted below.

2.1046(a)
80.215 (e)(1) **RF_power_output.**

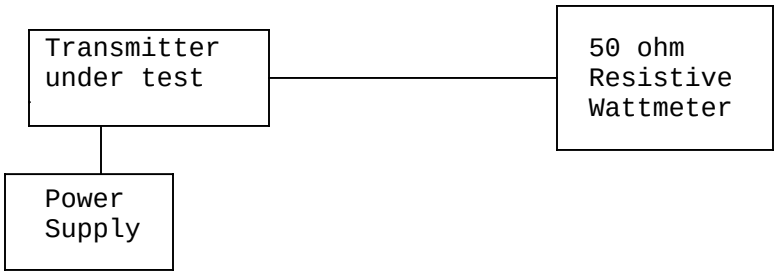
RF power is measured by connecting a 50 ohm, resistive wattmeter to the RF output connector. With a nominal battery voltage, and the transmitter properly adjusted the RF output measures:

OUTPUT POWER: HIGH: 25 W
LOW: 1 W

80.911 (d)(5) For primary supply voltages, measured in accordance with the procedures in this paragraph, greater than 11.5 volts, but less than 12.6 volts, the required transmitter output power shall be equal or greater than the value calculated below

P = 4.375(v) – 35.313 (For 12V this equals 17.2W)

METHOD OF MEASURING RF POWER OUTPUT



TIMCO ENGINEERING INC.
849 NW State Road 45

TECHNICAL DATA:

80.203 (b)	**External Controls:** The transmitter is capable of changing frequency between 156.05 – 157.425 MHz by external control. The available channels are shown in the User Manual description Channel List. These channels are preprogrammed by the manufacturer and change of frequency is inaccessible to the station operator.
80.203 (c)	Five minutes continuous transmission test. The antenna was connected to a dummy load and the radio was locked in a transmit PTT mode. An external timer digital clock was used to observe the duration of the un-modulated transmission. The transmitter turned off and the radio went to receive mode at 4 minutes, 58 seconds as displayed by the external digital clock.
80.203 (n)	This radio complies with the requirement for DSC capability in the 156 – 162 MHz band and in accordance with 80.225.
80.873; 80.956	Transmitter G3E emission capability: The transmitter was connected to 50 ohm resistive wattmeter and the frequency was set to 156.300 and to 156.800 MHz. With normal modulation, the output power displayed was 25 Watts at the high power setting and 1 watt at low power setting, consistent with previous measurements. The transmitter has been demonstrated to be capable, with normal operating voltages applied, of delivering 25 watts of carrier power into a 50 ohm resistive load over the specified frequencies.
80.911 (a)	80.956 G3E Transmissions: This radio is capable of G3E emission on 156.300 and 156.800 MHz
80.911 (c)	With 13.6 VDC applied and with the radio connected to a 50 ohm resistive wattmeter, the output power was measured at 156.300 and 156.800 MHz with a measured reading of 25 Watts under normal speech modulation.
80.911 (d)(2)	80.959 With the power supply set to 13.6 VDC, and the output of the transmitter terminated in a 50 ohm matching artificial load, the transmitter output power was monitored over a 10 minute continuous operational period while in full power. The output power varied from the nominal 25 Watts output power to 24.8 Watts output power

Spurious_emissions_at_antenna_terminals(conducted):

The data on the following page shows the level of conducted spurious responses. The carrier was modulated 100% using a 2500Hz tone. The spectrum was scanned from 0.4 to at least the 10th harmonic of the fundamental. The measurements were made in accordance with standard TIA/EIA-603.

REQUIREMENTS: Emissions must be 43 + 10log(Po) dB below the mean power output of the transmitter.

43 + 10log(25) = 57 **43 + 10log(1) = 43**

TF HIGH POWER	EF	dB below carrier	TF LOW POWER	EF	dB below carrier

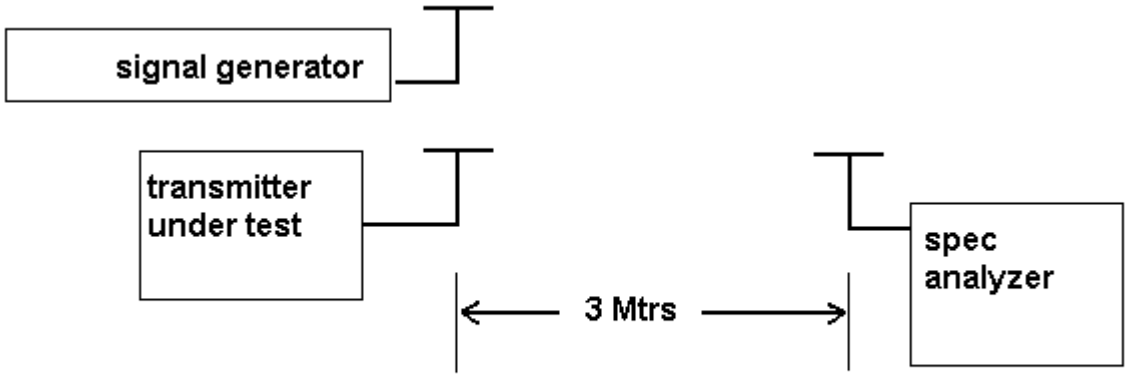
Method of Measuring Radiated Spurious Emissions



METHOD OF MEASUREMENT: The tabulated data shows the results of the radiated field strength emissions test. The spectrum was scanned from 30 to at least the tenth harmonic of the fundamental. This test was conducted per TIA/EIA STANDARD 603 using the substitution method. Measurements were made at the open field test site of TIMCO ENGINEERING, INC. located at 849 N.W. State Road 45, Newberry, FL 32669.

TIMCO ENGINEERING INC.

Frequency stability:

2.1055(a)(2)
80.209 (a)

Temperature and voltage tests were performed to verify that the frequency remains within the .0010%, 10.0ppm specification limit, for 20kHz spacing. The test was conducted as follows: The transmitter was placed in the temperature chamber at 25° C and allowed to stabilize for one hour. The transmitter was keyed ON for one minute during which four frequency readings were recorded at 15 second intervals. The worse case number was taken for temperature plotting. The assigned channel frequency was considered to be the reference frequency. The temperature was then reduced to -30° C after which the transmitter was again allowed to stabilize for one hour. The transmitter was keyed ON for one minute, and again frequency readings were noted at 15 sec intervals. The worst-case number was recorded for temperature plotting. This procedure was repeated in 10-degree increments up to + 50° C.

Readings were also taken at minus 15% of the battery voltage, which we estimate to be the battery endpoint.

MEASUREMENT DATA:

TEMPERATURE °C	FREQUENCY MHz	PPM
REFERENCE:	156.050098	
-30C	156.049196	-5.78
-20C	156.049883	-1.38
-10C	156.050319	1.42
0C	156.050595	3.18
10C	156.050496	2.55
20C	156.050225	0.81
30C	156.050075	-0.15
40C	156.050030	-0.44
50C	156.050040	-0.37

Batt. Volts	Batt. Data	PPM
-15%	156.050217	0.76
+15%	156.050237	0.89

RESULTS OF MEASUREMENTS: The test results indicates that the EUT meets the requirements.

RF Exposure Information

General information:

FCCID:
Device category: Mobile per Part 2.1091
Environment: General Population/Uncontrolled Exposure

Mobile devices that operate under part 80of this chapter are subject to routine environmental evaluation for RF exposure prior to equipment authorization or use if they operate at frequencies of 1.5 GHz or below and their effective radiated power (ERP) is 1.5 watts or more. However, compliance with the power density limits of 1.1310 is required.

Antenna:

The manufacturer does not specify any antenna to be used with this device.

This device has provisions for operation in a boat or a fixed location.

Configuration	Antenna p/n	Type	Max. Gain (dBi)
Boat	Any	-	7dBi (5dBd)
Fixed	Any	-	7dBi (5dBd)

Operating configuration and exposure conditions:

- Boat Operation: Cable length = 20 ft exposed and 3 feet internal to radom = 23 ft. Total. 23 feet cable loss including connector insertion loss at 156 MHz 1 dB. The maximum antenna gain that can be used is 5dBd (7 dBi).

TIMCO ENGINEERING INC.
849 NW State Road 45
Newberry, Florida 32669
http://www.timcoengr.com
888.472.2424 F 352.472.2030 email: sid@timcoengr.com

$W := 25$ power in Watts

$D := 1$ Duty Factor in decimal % (1=100%)

1 for FM

$E := 15$ exposure time in minutes

$U := 30$ (use 6 for controlled and 30 for uncontrolled)

$$Wexp := W \cdot D \cdot \left(\frac{E}{U}\right)$$

$$PC := \frac{E}{U}$$

$PC = 0.5$ percent on time

$Wexp = 12.5$ Watts

$Po := 12500$ mWatts

$dBd := .5$ antenna gain minus coax loss

$G := dBd + 2.15$ gain in dBi

$f := 156$ Frequency in MHz

$Gn := 10^{\frac{G}{10}}$ gain numeric

$S := .2$ power density limit for uncontrolled exposure

$Gn = 1.841$

$S = 0.2$

$$R := \sqrt{\frac{(Po \cdot Gn)}{(4 \cdot \pi \cdot S)}}$$

$$inches := \frac{R}{2.54}$$

$R = 95.683$ distance in centimeters required for compliance

$inches = 37.67$

Conclusion:

The device complies with the MPE requirements by providing a safe separation distance of 96 cm between the antenna, including any radiating structure, and any persons when normally operated .

Proposed RF exposure safety information to include in User's Manual:

"FCC RF Exposure Requirements:

CAUTION:
The antenna(s) used for this transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Vehicle – Antenna Installation:
- Antennas used for this transmitter must not exceed an antenna gain of 5 dBd.
- For rear deck trunk and roof top installations, the antenna must be located at least 96 cm away from rear-seat passengers and bystanders in order to comply with the FCC RF exposure requirements.

Boat – Antenna Installation:
- Antennas used for this transmitter must not exceed an antenna gain of 5dBd(7dBi).
- The antenna must be located at least 96 cm away from passengers in order to comply with the FCC RF exposure requirements.

Failure to observe these restrictions will result in exceeding the FCC RF exposure limits.

~~~~~~~~~~~~~~~~

FYI - Draft/Grant notes – RF exposure: TCB **Section D:** Mobile transmitters identified in §2.1091 that satisfy Categorical Exclusion Requirements of §2.1091:
…
The antenna installation and operating configurations of this transmitter, including any applicable source-based time-averaging duty factor, antenna gain and cable loss must satisfy MPE categorical Exclusion Requirements of §2.1091. The antenna(s) used for this transmitter must be installed to provide a separation distance of at least 96 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter. Users and installers must be provided with antenna installation instructions and transmitter operating conditions for satisfying RF exposure compliance.
