BG-A318 Phone

User's Guide

About this manual

Welcome to the BG-A318 Phone. Your Bluewinc Phone comes with two parts.

- **'Before you start' (Included in one sheet)**
- **'Operation Instruction' (This guide)**

Before using your BG-A318 Phone, read **'Before you start'** for overview of features, basic setup, and other important details.

After you become familiarized with its basic functionality, you can use the other manual (**Operation Instruction**) as references for detailed features, less common tasks, and for maintaining your BG-A318 one.

These manuals can also serve as a source of information if you have problems operating your BG-A318 Phone.

The contents of this guide are:

- **'Before you start' (Included in one sheet)**

Time Area:

the phone status Current time is displayed in the centre of the Area.

4. SIM Card

SIM Card provides several value added services other than Handset does.

These functions will only display and work on the menu of the phone when you SIM card is supported.

This menu may be not shown depending on the SIM card.

The content and the terms of the function lists will depend on your network service provider.

Please contact your network service provider (a network operator or the service provider) in regards with availability of any services related to the SIM card, application information and the costs.

4.1 How to place the SIM card

Ensure the phone is switched off and the travel charger is detached first before you start the following steps.

1. Remove the battery.
2. Push the SIM card holder in the direction of the arrow and hold it in this position.
3. Insert a new SIM Card under the two tabs on the right of the phone, ensuring that the cut corner is right and the gold contact of the card face into the phone.
4. Hold the SIM card down and release the holder to lock it into place.
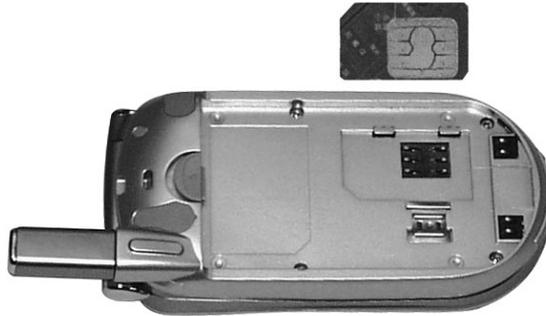

4.2 How to remove the SIM card

Ensure the phone is switched off and the travel charger is detached first before you start the following steps.

1. Remove the battery.
2. Release the SIM Card holder by moving the SIM Card holder to the left direction.
3. Remove the SIM card from the holder.
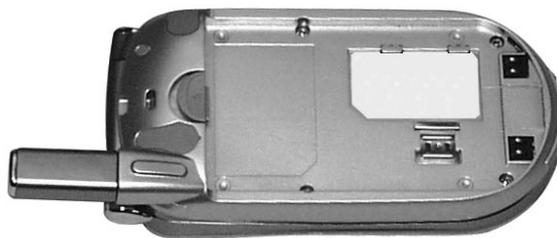

! Note: About remove the SIM Card

When you remove the SIM Card, the phone must power off. If you remove the SIM Card when power on, The memory of the SIM Card (Messages and Call Logs) will be erase.

! Note: About the SIM card

The SIM Card is a computer chip containing information about your subscription, security, phonebook etc.

When you register as a subscriber with GSM network operator, you are provided with the SIM card. Always handle the SIM Card with care and insert with the gold contacts face down.

B. Basic Uses

1. Power On/Off

1.1 How to switch your phone On And Off

Make sure that the battery is inserted.

1. Open the folder
2. To switch your phone on, press and hold down [**END**] until you hear the power-on melody. To switch your phone off, press and hold down [**END**] until you hear the power-off melody.

   Some SIM card may be protected with **PIN.**
   If **Enter PIN** is prompted, enter your **PIN** and then press [**Ok** soft key].
   For more details, please see Security Setting in 4.6.

! Note: If your **PIN** is entered invalidly three times in succession, your SIM card is blocked. In order to unblock it, see Security Codes in 4.6.

   If the Phone lock screen is appear, you can press [**Unlock**] and enter your **Lock Code** and then press **OK**.
   The default **Lock Code** is **1 2 3 4**.
   For more details, please see Security Setting in Menu 4.6.3.
   After the phone is tuned on, the phone searches for a network.

2. Security Codes

The security codes are used to protect your phone and SIM card from other person's use and control access to security and other options within the menus.

You can change the security codes. For more details, please see the **Security Setting** Operation Instruction menu in 4.6.

2.1 PIN1

PIN1 is Personal Identification Number, used to safeguard your SIM card.

PIN1 code is composed of at least 4 to 8 digits, and usually provided with your SIM card.

If the **PIN**1code is entered incorrectly more than three times in succession, **PIN1** will be blocked and your SIM card will automatically lock-up. Once your SIM card is blocked, you must put the Pin number to use your phone again.

2.2 PIN2

PIN2 is Personal Identification Number 2, used to access specific function of your SIM card. **PIN2** code is composed of at least 4 to 8 digits, is only available when your SIM card supports such functions. If the **PIN2** code is entered incorrectly three times in succession, **PIN2** will be blocked and your SIM card will automatically lock-up.

2.3 Phone Lock

Lock Code is used to prevent your phone from being used by another person. The code is composed of 4 digits. The code is provided with your phone and is preset from factory to default setting of '**1 2 3 4**'

2.4 Fixed Names

Fixed Names is used to access call barring service and the code is the network password of four digits code. In order to get the Fixed Names, you should subscribe call barring

service on your network service provider and then request for the Fixed Names

3. Call Function

3.1 Making a call

1. To make a call on your phone, enter the area code and the phone number in the idle   screen.

   In case you enter a number incorrectly, press the [**Clear** function key] once to delete the last digit that you have entered. To remove all the digits, press and hold the [**Clear** function key] down until they are deleted, or press **[Back soft key]**.

2. Press the [**SEND**].

If the number is identified from the phonebook, the name is displayed.

If you want to end the call while making a call, press [**End** soft key] or close the folder. The screen will display a brief message and return to the idle.

3. You can save the phone number that you entered by press [**Save** soft key].

! Note: The brief message at the call ending may remain long time if the network is busy.

If the earphone is inserted, or if the call is data call, the folder closing does not make the call end.

● **Quick dialing from speed list**

Press and hold a numeric key ([2]~[9]) that represents the entry number in the speed dial list. Then the number assigned on the key will be automatically dialed. Please see **Speed Dialing** for more details.

● **Quick dialing from recent calls list**

1. Press following key for the each recent call in the idle screen.

[**SEND**]: the recent **10** outgoing calls.

[**NAVI-LEFT**]: the recent **10** missed calls.

[**NAVI-RIGHT**]: the recent **10** answered calls.

2. Locate the cursor with [**NAVI-UP**] or [**NAVI-DOWN**] to the name or number you want to call.

3. Press [**SEND**] to make a call.

3.2 Answering a call

1. When there is an incoming call, the call icon on the phone screen will flash, and the ringer will sound o r the vibrator will work according to the setting.

If the caller is identified, the caller phone number or name (if stored in the Phonebook or SIM) is displayed.

If the caller is not identified, **Num. Withheld** (if the network suppresses the number display) is displayed.

2. When you answered the incoming call, the call activate icon on the phone will flash

Press [**Accept** soft key] or [**SEND**], open the folder to answer the incoming call.

If **AnyKey** menu option is set to **On** and the folder has been opened, you can press any key to answer the call except for the [**END**] key.

! Note: If the earphone is inserted, or if the call is data call, opening of the folder does not make the call
answer.

3. If you want to reject the incoming call when the folder has been opened, press [**Reject** soft key] or [**E
nd**] key.
The call number is saved in the Answered calls list.

! Note: If the earphone is inserted, or if the call is data call, closing the folder does not make the call
reject.

3.3 During a call

During a call, press the **[Menu]** key, thfe following options are available.

A. Putting a call on hold/unhold

You can put the current call on hold or unhold during a call.

B. Mute/ Unmute

You can select mute or unmute during a call.

C. DTMF On / DTMF Off

You can select DTMF on or off during a call.

D. Send My Number

You can send your number during a call.

E. Adjusting the earpiece volume

During a call, you can adjust the earpiece volume.
To increase the volume, press the [**VOLUME-UP**] or [**NAVI-UP**] or **[NAVI-RIGHT]** key.
To decrease the volume, press the [**VOLUME-DOWN**] or [**NAVI-DOWN**] or [**NAVI-LEFT**] key.

Watching the date

The date is appeared by pressing and holding the [**VOLUME-UP**] or **[VOLUME-DOWN]** key when the
folder has been closed.
You can see the dates for a few second in the sub LCD.

C. Device Care

1. Phone and Battery Care

- Keep in mind that a new battery's full performance is achieved only after two or three times of

completed charging and discharging cycles!

- The battery can be charged and discharged hundreds of times but it will eventually wear out. When the operating time (talk-time and stand-by time) is noticeably shorter than normal, It is recommended that you change your battery.

- Do not attempt to open the casing on your phone or its battery.

- Use only the supplied or an approved replacement antenna. Unauthorized antennas, modifications or attachments could damage the phone and may violate regulations governing use of mobile phones or FCC regulations.

- Always keep SIM card out of children's reach.

- Use your phone battery only for its intended purpose, and never use any charger or battery, which is damaged or worn out.

- Never allow the battery terminals to short circuit, as this can cause damage to the battery or to the connecting object. (a short circuit can occur if a metallic object such as a coin, clip or pen causes direct connection between the + and – terminals of the battery)
  Therefore, always take adequate precautions when carrying a spare battery in a purse or pocket.

- Battery must be recycled or disposed of properly, and must not be disposed of in municipal waste. Never dispose of batteries in a fire.

- When you unplug your phone from its charger, grasp and pull the plug, not the power cord.

- For good operation times, discharge a Lithium battery from time to time by leaving your phone switched on until it turns itself off.

- Do not drop, shake or immerse in water.

- Do not use harsh chemicals, cleaning solvents, or strong detergents to clean it. Wipe it with a soft cloth slightly dampened in a mild soap-and-water solution.

BG-A318 Phone Operation Instruction

A. Operating Instruction - Basic

1. Call function (Direct key Function)

1.1 Direct key for Voice memo
Start recoding voice memo

You can start recording voice memo by just pressing and holding the **[Voice memo key]**.(On the left side of the phone)

Key info

Using Key	Actions
Centre (@)	Fire
UP	Move to up
DOWN	Move to down
LEFT	Move to left
RIGHT	Move to right
CLEAR	Pause
1	BOMB
5	Fire

7.2 WAP

WAP is a standard specifically created for mobile communications devices and gives fast and easy access to the Internet information and services. Now you can find a lot of useful information by using the WAP browser in your mobile phone, instead of using your computer. There are WAP services available that you will be able to access, such as reservation services, news, sports and weather, etc.

The ways in which you can go to a WAP page are as follows:
- Press "@" key for 3 second
- Selecting **Homepage** menu
- Selecting a address list in **Bookmarks** menu
- Entering its address in the online **Go to URL** menu

1. Browser

You can invert the specific hyperlink with a cursor that is indicated as an underline each and view the content by selecting the inverted hyperlink. You may choose these items pressing the [**Select**] or [**SEND**] key in the screen.

The Scroll Bar represents the length of the WML Page and the location at which you are currently viewing.

The Browser connecting animations shows that the browser is downloading new data from the network or is moving to a new site. You can also stop browsing using **Stop** menu in the Browser online menu.

You can move back to the previous page, if any, by selecting **Back** menu in the Browser online menu. If you move to a new URL, it does reset the history List, so you cannot move back to the previous page.

If a selected link has only one function, the left menu is **Select**, otherwise **Option**.
If you press [**Option** soft key] on the browser, you can use the option menu from WML contents.

If you press [**Menu** soft key] on the browser, you can use the following available options.
Stop: stops browser action.
Go back: Navigates back one page in the history list.
Bookmars: presents the list and allows you to modify that and go to the Web page you want.
Add bookmark: adds a new list to the bookmarks for the Web page you are viewing

Enter address: allows you to enter a URL to browse to

Add Bookmark: adds a new list to the bookmarks for the Web page you are viewing

Home: connects to the homepage you defined in the profile

Top: jumps back to the top of the current page

The following keys are available for use when browsing:

[**NAVI-UP**]: moves the screen upwards.

[**NAVI-DOWN**]: moves the screen downwards.

[**NAVI-LEFT**]: moves the screen left if needed.

[**NAVI-RIGHT**]: moves the screen right if needed.

[**SEND**] / [**SELECT**]: selects an item (if it is a selectable item).

[**END**]: exits the browser.

! Note: Although the call is not in active state, if you ask the browser to do an action (by selecting an option menu or by pressing the [**Back** soft key]), it automatically makes a call and tries to reconnect to the WAP site.

! Note: When an active call is disconnected. It will show you disconnected states and costs (if needed)

WAP menus

7.2.1 Homepage: Once a connection profile has been set up, you can connect to the home page you defined.

7.2.2 Bookmarks: You can access the lists of bookmark sets, add bookmark and clear bookmarks in this menu.

Bookmark List

Ten bookmarks are available.

[Yahoo]
[AOL]
[O2]
[Financial Timers]
[Cnet Tech News]

[T-Mobile UK]

[Ents24]

[WEB.DE]

[Vizzavi]

[El Paris]

Select: launches the WAP browser and loads the page bookmarked.

After press select, you can **Go To Bookmark**, **Edit** and **Delete**.

Go To Bookmark: You can go to that bookmark immediately.

Edit: allows you to alter the name of the bookmark and address.

Delete: deletes the current bookmark.

Add Bookmark

Press the [@] function key, you can select the input mode to edit the bookmark name. (English, Quick English, Number and Symbols.)

Clear Bookmarks

Press the [OK] function key, you can clear all the bookmark lists.

7.2.3 History: If you once connect a WAP page, this menu allow you to connect to that page directly

7.2.4 Go to URL: You can enter a WAP page address directly.

7.2.5 Settings: A WAP profile consists of a group of network settings.

After having set them up, you simply switch between the different WAP profiles, without having to re-enter the settings every time you want to change your network connection.

7.2.5.1 Profiles: In this option, there have 5 profiles you can select.

At first, select a profile you want to set up. And then you will be asked if you want to **Active**, **Edit** or **Rename** the profile and you need to choose.

Active: This option activates the chosen setting as a current WAP setting to be used for the WAP connection.

Edit: This option edits the WAP setting values to connect to Internet.

! Note: The setting value varies according to the WAP service provider.

So please contact your network service provider for the values before using WAP services**.**

If you select **Edit**, the following options are available.

Homepage: Enter the address of the WAP page that you want to use as your home page for the WAP profile. Following editor will be used for editing homepage.

CURRENT INPUT
MODE

[*] Key allows you to change the input mode

[ABC->abc->Abc]

Tips: To choose a letter on a keypad, the key is pressed the appropriate number of times, rapidly in Succession, once for the first letter, twice for the second letter etc.

Session Type: Select type of internet connection. A square cursor shows the Current status on the right.

Temporary: is a non-confirmed (connectionless) service.

Continuous: is a confirmed delivery mechanism but generate more network traffic

Security: Select type of internet connection. A square cursor shows the Current status on the right.

Secure: Data was encrypted during transmission.

None: is data transmission without encryption.

IP Address: You must enter the IP address of the WAP gateway if you want to use to access WAP pages. It is provided by your Mobile Services provider.

Username: Input gateway user's ID and password, if needed.

Edit Name**:** Input user's ID.

Password**:** Input user's password.

APN: Input the APN, if needed.

7.2.5.2 Save History: You can choose ON or OFF to determine browser's data save in cache or not. A square cursor shows the current status on the right side.

7.2.5.3 Image scaling: This allows you to determine the image display mode. A square cursor shows the current status on the right side.

On **/** Off**:** Display images or not.

7.2.6 Clear Histories

When opening a WAP page, if the WAP page which has been stored in the cache, the browser automatically use the stored data in the cache. This menu enables you to flush the cache.

! Note: WAP error codes

When error or information occurred, the browser shows you the information with popup. If it is critical, the browser is exited. Followings are some useful codes.

[Code 3]: Bearer error. When data call failed or GSM data service problems or data call disconnected in browsing.

Please, check your profile' settings and calling states.

[Code 225]: Gateway error. When network's speed is slow or gateway is disconnected abnormally.

Please, try again.

D. Trouble Shooting

If you meet a trouble on the your phone operation, please check the followings.

These checks enable you to save the time and expense due to the unnecessary after-service.

1. When Enter PIN appears at the power-up.

The **PIN** check is currently enabled.

You must enter the **PIN** supplied together with your SIM card. You can disable the **PIN** check if you want, please see Security Setting menu in 4.6.

2. When Insert SIM screen appears at the power-up.

Please check that your SIM card is inserted adequately.

3. When Enter Lock Code appears at the power-up.

Your phone is phone locked.

You must enter the Lock Code supplied together with your phone.

4. No Service appears.

You probably are in the area out of the coverage of a GSM/DCS network.

5. If any tone is not generated when you press a keypad.

You need to check the Silence Mode setting.

You need to check the Type and Volume option of Key Tone menu.

You need to check Profiles menu.

6. If an audible alert is not made when a call is received.

You need to check the Silence Mode setting.

You need to check the Alert Type and Ring Volume option in Sound Setting menu.

7. If an audible alert is not made when an alarm is expired.

You need to check the Silence Mode setting.

8. If an outgoing call is not made.

You have probably set an outgoing calls barring option. You need to check Call Barring menu.

9. If an incoming call is not made.

You have probably set an incoming calls barring option. You need to check Call Barring menu.

10. If an outgoing SMS message is not sent.

You need to check the Outbox option in Message menu.

11. If all audible key tones are muted and all audible alerts are changed to vibrator alert.

You need to check the Silence Mode setting.

By just pressing and holding [**VOLUME-CENTRE**] on the idle screen, you can escape or enter the mode.

12. If some menus relevant to the sound are not visible on the Sound Setting menu.

You need to check Silence Mode setting.

By just pressing and holding [**VOLUME-CENTRE**] on the idle screen, you can escape or enter the mode.

E. Safety Information

For the efficient and safe operation of your phone, observe these guidelines.

1. Everyday Use of your phone

For normal operating position, hold your phone as you would any other telephone, with the antenna pointed up and over your shoulder.

Do not touch the antenna unnecessarily when your phone is in use, as this will affect call quality and may cause the phone to operate at a higher power level than otherwise needed.

As with any other radio transmitting equipment, you are advised that for the satisfactory operation of your phone and for your own safety, you should use your phone only in the normal operating position.

1.1 Using your phone in a vehicle

Safety comes first, and is the ultimate responsibility of the driver. Please:

i) Give full attention to driving – driving safely is your first responsibility.

ii) Use Hands-free Kit, if available.

iii) If you have those kits make sure it is done pre-programmed numbers where possible, and keeping calls brief and to a minimum.

iv) If you don't have a Hands-free Kit, pull off the road and park your vehicle before making or answering a call in driving conditions so require.

1.2 Non-ionizing radiation (exposure to Radio Frequency Signals)

Your phone is a low power radio transmitter and receiver. When it is on, it receives and also sends the radio frequency (RF) signals. Most modern electronic equipment is shielded from RF signals. However, certain electronic equipment may not be shielded against the RF signals from your mobile phone. RF signals may affect improperly installed or inadequately shielded electronic systems in motor vehicles. Consult your vehicle manufacturer and the manufacturer of any equipment that has been added to the vehicle.

1.3 Pacemakers

The Health industry Manufacturers Association recommends that a minimum separation of six inches be maintained between a mobile phone and a pacemakers to avoid potential interference with the pacemaker. Users with pacemakers:

i) Always keep your phone at least 20 cm (6inches) from your pacemakers when the phone is switched on.

ii) Do not carry your phone in your breast pocket.

iii) Use the ear opposite the pacemakers to minimize the potential for interference.

iv) Switch off your phone immediately if you suspect that interference is being caused.

1.4 Hearing aids

Some mobile phones, including your mobile phone, may interfere with certain hearing aids. In the event of such interference you may consult the hearing manufacturer to discuss alternatives.

1.5 Other medical devices

If you use any other medical devices, please consult a physician or the manufacturer of the medical devices to determine if they are adequately shielded from external RF energy. Your physician may be able to assist you in obtaining this information. Always check the regulations of the healthcare facilities, which generally request that all mobiles are switched off on entry.

1.6 Operating Environment

Remember to follow any special regulations in force in any area, and always turn off your phone wherever it is forbidden to use it, or when it may cause interference or danger.

1.7 Aircraft Safety

FCC regulations prohibit using your phone while in the air. Switch off your phone before boarding an aircraft.

1.8 Explosive Atmospheres and materials

Turn your phone off and do not remove the battery when in any area with a potential explosive atmosphere and obey all signs and instructions. You must observe restrictions on the use of radio equipment in fuel depots; below deck on boats; fuel or chemical transfer or storage facilities; areas where the air contains chemicals or particles, such as grain, dust, or metal powders; areas with signs about explosive atmospheres or where blasting operations are in progress; any other areas where you would normally be advised to turn off your vehicle engines.

1.9 For Vehicle Equipped with an Air Bag

Al air bag inflates with great force. Do not place objects, including both installed or portable wireless equipment, in the area over the air bag or in the air bag development area. If in-vehicle wireless equipment is improperly installed and the air bag inflates, serious injury could result.

1.10 Battery charging

Do not charge the phone without the battery in place.

F. Glossary

Cell Broadcast

This network service allows you to receive the broadcasted text messages on various topics such as weather, traffic, local district code, local hospitals, taxis or pharmacy in the area where you are.

CUG (Closed User Group)

This network service allows the restriction of calls to and from a selected user group.

DTMF (Dial Tone Multi Frequency)

Codes sent as tone signals. Used for telephone banking, for accessing an answering machine, etc.

Network Service Operator

To be able to use your phone, you need a subscription to a network. You get this subscription from a network operator, together with a SIM card that you need to use with your phone.

PIN1 (Personal Identification Number)

The code is to establish authorization for access to certain functions or information in your SIM card. The PIN code comes with your subscription. It may be a four to eight digit number and can be changed as required.

PIN2 (Personal Identification Number 2)

The code is an authorization code to access certain special field in your SIM card. The PIN2 code does not come with your subscription in some country.

Roaming

Use of your phone when you are outside your subscription network area.

SIM (Subscriber Identity Module)

It contains subscriber details, security information and memory for a personal directory of numbers.

SMS (Short Message Service)

Messages to be sent and received via the network service operator's message centre to your mobile phone. To use this service, it must be supported from your network.

WAP (Wireless Application Protocol)

A standard specifically created for mobile communications devices and gives fast and easy access to Internet information and services.

GPRS (General Packet Radio Service)

GPRS enabled networks offer 'always-on', higher capacity, Internet-based content and packet-based data services. This enable services such as colour Internet browsing, E-mail on the move.

Safety Information

1 . SAFETY INFORMATION FOR FIXED WIRELESS TERMINALS

.POTE NTIALLY EXPLOSIVE ATMOSPHERES

Turn your phone OFF when in any area with a potentially explosive atmosphere and obey all signs and instructions. Sparks in such areas could cauls e an explosion or fire resulting in bodily injury or even death.

.

INTERFERENCE TO MEDICAL DIVICES

Certain electronic equipment may be shielded against RF signal from you wireless phone. (pacemakers, Hearing Aids, and so on) Turn your phone OFF in health care facilities when any regulations posted in these areas instruct you to do so.

RF signals may affect improperly installed or inadequately shielded electronic system in motor vehicles.

.EXPOSURE TO RF ENERGY

Use only the supplied or an approved replacement antenna.

Do not touch the antenna unnecessarily when the phone is in use.

Do not move the antenna close to, or touching any exposed part of the body when making a call.

SAR INFORMATION

THIS MODEL PHONE MEETS THE GOVERNMENT'S
REQUIREMENTS FOR EXPOSURE TO RADIO WAVES.

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. * Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model phone when tested for use at the ear is 1.02 **W/Kg** and when worn on the body, as described in this user guide, is **0.372 W/Kg**. (Body-worn measurements differ among phone models, depending upon available accessories and FCC requirements). While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of http://www.fcc.gov/ oet/fccid after searching on **FCC ID: S4IBG-A318**.

Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) web-site at http://www.wow-com.com.
* In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a sub-stantial margin of safety to give additional protection for the public and to account for any variations in measurements.

SAFETY INFORMATION FOR RF EXPOSURE

Body worn operation

This device was tested for typical body-worn operations with the back of the phone kept 15 mm. from the body. To maintain compliance with FCC RF exposure requirements, use only belt-clips, holsters or similar accessories that maintain a 15 mm. separation distance between the user's body and the back of the phone, including the antenna. The use of belt-clips, holsters and similar accessories should not contain metallic components in its assembly. The use of accessories that do not satisfy these requirements may not comply with FCC RF exposure requirements, and should be avoided.

FCC Compliance Information

This device complies with Part 15 of FCC Rules.
Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and
(2) This device must accept any interference received.
Including interference that may cause undesired operation.

U.S.FEDERAL COMMUNICATIONS COMMISSION

RADIO FREQUENCY INTERFERENCE STATEMENT

INFORMATION TO THE USER

NOTE : This equipment has been tested and found to comply with the limits for a   Class B digital device pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful Interference in a residential installation This equipment generates, uses, and can radiate radio frequency energy and, if Not installed and used in accordance with the instructions, may cause harmful Interference to radio communications. However, there is no guarantee that interference will not occur in a particular Installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet of a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for assistance.

Changes or modification not expressly approved by the party responsible for Compliance could void the user's authority to operate the equipment. Connecting of peripherals requires the use of grounded shielded signal cables.
