RE: ATCB005510

FCC ID: S4JS1613-01A

I have a few comments on this application. Depending on your responses, kindly understand there may be additional comments.

1. The DoC logo can only be shown on the label as this device has been tested under FCC Part 15B. Please indicate where I can see this device has been tested with Part 15B.
  
2. FCC has requested the target value of Relative Permittivity, Conductivity and SAR value used for system validation must be that from the manufacturer calibrated dipole instead of using the target value from IEEE 1528 or FCC OET 65C.  
Based on above requirement, the target value of Permittivity, Conductivity and SAR (39.2, 1.8 and 13.7W/kg) on page 45 at section "8-a system validation of 2450MHz" needs to be replaced with system validation parameters 37.8, 1.77 and 13.7W/kg from manufacturer calibrated dipole as shown at page 50.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
