It is our intention to provide Quality Auditing Institute and the commission with a full disclosure of our product so that its merits can be evaluated. Indeed, we are pleased to provide any further information that the commission might wish to see. It is not our intention, however, to make our proprietary process a matter of public record.

In view of the fact that the block diagrams, schematics, and associated theory of operation disclose the mechanism of our process, we ask that these portions (block diagrams, schematics, and theory of operation) of our application be withheld from public inspection as provided under FCC section 0.457(d) and 0.459. These documents contain details of the proprietary operation of product. These details are not readily discernible - even to technically sophisticated individuals - from our hardware and constitute trade secrets. Please note the internal picture have detail component part number and vendor information, if disclosed this information it will provide unjustified benefits to our competitors. The unit is a non-consumer device and is inaccessible to the general public due to the location. It is only serviceable by the licensee or designated technicians. The unit also has a warranty void sticker. Customers are subject to the terms of a NDA and may not directly or indirectly use, disclose, reproduce, summarize or distribute any confidential information unless expressly authorized by Star Solutions.

We request therefore that these documents be segregated from the body of our evaluation report and withheld from public inspection.

Thank you for your attention. Please let the undersigned know if Quality Auditing Institute or the Commission disagrees with our position or requires further justification.

Sincerely,

A handwritten signature in black ink, appearing to read "Owen Lin".
