To whom it may concern

Wi-Fi Module Operation

This letter is to confirm that the operation of the Wi-Fi module (Murata LBWA1ZZVK7-539) is not used to transmit data and is only used to receive information. The BluTag or Blu+ device will not initiate any connection and its purpose is to scan for transmitting SSID's. The transmitter functionality is disabled by Firmware by STOP during product manufacture and this cannot be changed by the equipment user.

Yours faithfully,

Stephen Freathy
VP Engineering
