TEST REPORT
FROM
RFI GLOBAL SERVICES LTD

Test of: Satellite Tracking of People LLC.
Blu Tag Version 3.

To: OET Bulletin 65 Supplement C: (2001-01)

Measurements were performed on the DASY4 System

Test Report Serial No:
RFI/SARE1/RP47271JD02A

This Test Report Is Issued Under The Authority Of Andrew Brown, Operations Manager: 	
Tested By: Nirav Modi 	**Checked By: Scott D'Adamo** 
Report Copy No: **PDF01**	
Issue Date: 21 June 2005	**Test Dates: 23 May 2005 to 25 May 2005**

It should be noted that the standard, OET Bulletin 65 Supplement C: (2001-01) is not listed on RFI's current UKAS schedule and is therefore "not UKAS accredited".

This report is issued in Adobe Acrobat portable document format (PDF). It is only a valid copy of the report if it is being viewed in PDF format with the following security options not allowed: Changing the document, Selecting text and graphics, Adding or changing notes and form fields. Furthermore, the date of creation must match the issue date stated above.
This report may be copied in full. The results in this report apply only to the sample(s) tested.

This report may be reproduced in full. Partial reproduction may only be made with the written consent of RFI Global Services Ltd

The results in this report apply only to the sample(s) tested.

To: OET Bulletin 65 Supplement C: (2001-01)

Table of Contents

1. Client Information

Company Name:	Satellite Tacking Of People LLC (STOP).
Address:	102 Woodmount Blvd., Suite 800 Nashville, TN 37205 USA
Contact Name:	Mr Stephen Freathy

Test Laboratory

Company Name:	RFI Global Services Ltd
Address:	Ewhurst Park Ramsdell Basingstoke Hampshire RG26 5RQ.
Contact Name:	Mr A Brown

2. Equipment Under Test (EUT)

The following information (with the exception of the date of receipt) has been supplied by the client:

2.1. Identification of Equipment Under Test (EUT)

Brand Name:	STOP
Model Name or Number:	Blu Tag Version 3
Unique Type Identification:	None Stated
FCC Identification:	S5EAA70038
Serial Number:	TR30002-6436
Battery Serial Number:	None Stated
Country of Manufacture:	UK
Date of Receipt:	16 May 2005

2.2. Accessories

The following accessories were supplied with the EUT:

Description:	AC Adaptor
Brand Name:	MPW
Model Name or Number:	SA070810
Part Number:	9811009821
Cable Length and Type:	1.5m 2 Core
Connected to Port:	DC Input
Date of Receipt:	16 May 2005
Description:	AC Adaptor

Description:	Strap
Brand Name:	None Stated
Model Name or Number:	None Stated
Serial Number:	None Stated
Cable Length and Type:	0.27m Fibre Optic Strap
Connected to Port:	EUT Enclosure
Date of Receipt:	16 May 2005
Description:	Strap

2.3. Description of EUT

The equipment under test is a personal tracking device exercised using 850 MHz and 1900 MHz GPRS transmit.

2.4 Modifications Incorporated in the EUT

During the course of testing the EUT was not modified.

2.5 Additional Information Related to the EUT

Equipment Class:	GPRS 850 / GPRS 1900		
FCC Rule Part(s):	OET Bulletin 65 Supplement C		
Device Category:	Portable		
Application Type:	Certification		
Maximum Power Output:	**850 MHz**	33 dBm	
	1900 MHz	30 dBm	
Transmitter Frequency Range:	**850 MHz**	824.0 MHz to 849.0 MHz	
	1900 MHz	1850 MHz to 1910.0 MHz	
Transmit Frequency Allocation of EUT When Under Test (Channels):	**Channel Number**	**Channel Description**	**Frequency (MHz)**
	128	Low	824.2
	189	Middle	836.4
	251	High	848.8
	512	Low	1850.2
	660	Middle	1879.8
	810	High	1909.8
Modulation(s):	217 Hz		
Modulation Scheme (Crest Factor):	8.3		
Antenna Length and Type:	Internal		
Number Of Antenna Positions:	1 Fixed		
Intended Operating Environment:	Within Network Coverage		
Weight:	~ 335.50g (with AC Adaptor and Strap)		
Dimensions (without Antenna) mm:	115 (L) x 90 (W) x 45 (H) mm		
Power Supply Requirement:			
DC Supply (Volts/Amps)	Not Applicable		
AC Supply (Volts/Amps)	Nominal 230 / 240 V, 50 Hz AC Mains Supply Nominal 115 V 60 Hz AC Mains Supply		
Internal Battery Supply:	4.2V 1500 mA/h Li-ion		

2.6 Port Identification

Port	Description	Type	Applicable
1	Enclosure	-	Y

2.7 Support Equipment

The following support equipment was used to exercise the EUT during testing:

Description:	Radio Communications Analyser
Brand Name:	Anritsu
Model Name or Number:	MT8820A
Serial Number:	6K00000633
Cable Length and Type:	1m Rosenberger
Connected to Port:	RF In / Out (Antenna)

3. Test Specification, Methods and Procedures

3.1. Test Specification

Reference:	OET Bulletin 65 Supplement C: (2001-01)
Title:	Evaluating Compliance with FCC Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields.

3.2. Methods and Procedures

The methods and procedures used were as detailed in:

EN 50361: 2001
Title: Basic standard for the measurement of specific absorption rate related to human exposure to electromagnetic fields from mobile phones (300 MHz - 3 GHz).

ANSI/IEEE C95.1: 1999
IEEE standard for safety levels with respect to human exposure to radio frequency electromagnetic fields, 3 kHz to 300 GHz.

Federal Communications Commission, “Evaluating compliance with FCC Guidelines for human exposure to radio frequency electromagnetic fields”, OET Bulletin 65 Supplement C, FCC, Washington, D.C, 20554, 2001.

Thomas Schmid, Oliver Egger and Neils Kuster, “Automated E-field scanning system for dosimetric assessments”, IEEE Transaction on microwave theory and techniques,
Vol. 44, pp. 105-113, January 1996.

Neils Kuster, Ralph Kastle and Thomas Schmid, “Dosimetric evaluation of mobile communications equipment with know precision”, IEICE Transactions of communications, Vol. E80-B, No.5, pp. 645-652, May 1997.

3.3. Definition Of Measurement Equipment

The measurement equipment used complied with the requirements as detailed in OET Bulletin 65 Supplement C, Appendix D.

4. Deviations from the Test Specification

None.

5. Operation of the EUT During Testing

5.1. Operating Modes

At the client's request the EUT was tested in the following operating mode(s):

GPRS 850 MHz and GPRS 1900 MHz Transmit mode only.

5.2. Configuration and Peripherals

The EUT was tested in the following configuration(s):

Standalone without Strap*
Standalone with Strap*
*EUT with AC Adaptor (240V 50Hz) in worst-case configuration.

6. Summary of Test Results

Test Name	Specification Reference	Compliancy Status
Specific Absorption Rate (SAR)	OET Bulletin 65 Supplement C	Complied

6.1. Location of Tests

All the measurements described in this report were performed at the premises of
RFI Global Services Ltd, Ewhurst Park, Ramsdell, Basingstoke, Hampshire, RG26 5RQ.

7. Measurements, Examinations and Derived Results

7.1. General Comments

This section contains test results only.

Measurement uncertainties are evaluated in accordance with current best practice. Our reported expanded uncertainties are based on standard uncertainties, which are multiplied by an appropriate coverage factor to provide a statistical confidence level of approximately 95%. Please refer to section 18 for details of measurement uncertainties.

7.2. Test Results

7.2.1. Test Results for Specific Absorption Rate – 850 MHz

Test Summary:

Maximum Level (W/kg):	0.709
Limit (W/kg):	4.000
Margin (W/kg):	3.291

Environmental Conditions:

Temperature Variation in Lab (°C):	25.0 to 25.0
Temperature Variation in Liquid (°C):	24.8 to 25.0

ERP Measurement before Test:	Refer to section 7.2.3

Results:

Position	Section	Channel Number	Level 10g (W/kg)	Limit 10g (W/kg)	Margin 10g (W/kg)	Note(s)	Result
Rear of EUT Facing Phantom without Strap	Flat	189	0.086	4.000	3.914	-	Complied
Front of EUT Facing Phantom without Strap	Flat	189	0.504	4.000	3.496	-	Complied
Rear of EUT Facing Phantom with Strap	Flat	189	0.005	4.000	3.995	-	Complied
Front of EUT Facing Phantom with Strap	Flat	189	0.527	4.000	3.473	-	Complied
Front of EUT Facing Phantom with Strap and AC Adaptor	Flat	189	0.542	4.000	3.458	-	Complied
Front of EUT Facing Phantom with strap and AC Adaptor	Flat	128	0.398	4.000	3.602	-	Complied
Front of EUT Facing Phantom with strap and AC Adaptor	Flat	251	0.709	4.000	3.291	-	Complied

7.2.2. Test Results for Specific Absorption Rate – 1900 MHz

Test Summary:

Maximum Level (W/kg):	0.967
Limit (W/kg):	4.000
Margin (W/kg):	3.033

Environmental Conditions:

Temperature Variation in Lab (°C):	25.0 to 25.0
Temperature Variation in Liquid (°C):	24.7 to 24.9

EIRP Measurement before Test:	Refer to section 7.2.3

Results:

Position	Section	Channel Number	Level 10g (W/kg)	Limit 10g (W/kg)	Margin 10g (W/kg)	Note(s)	Result
Rear of EUT Facing Phantom without Strap	Flat	660	0.048	4.000	3.952	-	Complied
Front of EUT Facing Phantom without Strap	Flat	660	0.733	4.000	3.267	-	Complied
Rear of EUT Facing Phantom with Strap	Flat	660	0.004	4.000	3.996	-	Complied
Front of EUT Facing Phantom with Strap	Flat	660	0.637	4.000	3.363	-	Complied
Front of EUT Facing Phantom without Strap with AC Adaptor	Flat	660	0.732	4.000	3.268	-	Complied
Front of EUT Facing Phantom without Strap	Flat	512	0.967	4.000	3.033	-	Complied
Front of EUT Facing Phantom without strap	Flat	810	0.654	4.000	3.346	-	Complied

7.2.3. ERP Measurement – GSM 850

Date: 25 May 2005

Channel	Frequency	TX Power before Test / dBm
Bottom	824.2	21.3
Middle	836.6	20.1
Top	848.8	20.3

EIRP Measurement – GPRS 1900 MHz

Date: 23 May to 24 May 2005

Channel	Frequency	TX Power before Test / dBm
Bottom	1850.2	28.9
Middle	1879.8	28.2
Top	1909.8	25.8

Note(s):

1. EIRP/ERP measurements are performed before testing only.

8. SAR Measurement System

RFI Global Services Ltd, SAR measurement facility utilises the Dosimetric Assessment System (DASY™) manufactured by Schmid & Partner Engineering AG (SPEAG™) of Zurich, Switzerland. The DASY4 system is comprised of the robot controller, computer, near-field probe, probe alignment sensor, and the SAM phantom containing brain or muscle equivalent material. The robot is a six-axis industrial robot performing precise movements to position the probe to the location (points) of maximum electromagnetic field (EMF). A cell controller system contains the power supply, robot controller; teach pendant (Joystick), and remote control. This is used to drive the robot motors. The Staubli robot is connected to the cell controller to allow software manipulation of the robot. The data acquisition electronics (DAE) performs signal amplification, signal multiplexing, AD-conversion, offset measurements, mechanical surface detection, collision detection etc. The DAE is connected to the Electro-optical coupler (EOC). The EOC performs the conversion from the optical into digital electric signal of the DAE and transfers data to the PC plug-in card. The DAE3 utilises a highly sensitive electrometer-grade preamplifier with auto-zeroing, a channel and gain-switching mulitplexer, a fast 16-bit AD-converter and a command decoder and control logic unit. Transmission to the PC-card is accomplished through an optical downlink for data and status information and an optical uplink for commands and clock lines. The mechanical probe-mounting device includes two different sensor systems for frontal and sidewise probe contacts. They are also used for mechanical surface detection and probe collision detection. The robot uses its own controller with a built in VME-bus computer.

9. SAR Safety Limits

Exposure Limits (General Populations/Uncontrolled Exposure Environment)	SAR (W/Kg)
Spatial Peak (averaged over any 10 g of tissue)	4.0 (Limb)

Note(s):

1. *OET Bulletin 65 Supplement C SAR safety limits specified in the table above applies to devices operated in the general population / uncontrolled exposure environment.*
2. *Uncontrolled environments are defined as locations where there is exposure of individuals who have no knowledge or control of their exposure.*

10. Details of SAR Evaluation

The equipment under test was found to be compliant for localised Specific Absorption Rate (SAR) based on the following provisions and conditions:

a) The EUT was positioned under the flat section of the SAM phantom.

b) SAR measurements were evaluated at maximum power and the unit was operated for an appropriate period prior to the evaluation in order to minimise the drift.

c) The device was keyed to operate continuously in the transmit mode for the duration of the test.

d) The location of the maximum spatial SAR distribution (Hot Spot) was determined relative to the EUT.

e) The EUT was tested with a fully charged battery and AC Adaptor where applicable.

11. Evaluation Procedures

The Specific Absorption Rate (SAR) evaluation was performed in the following manner:

a) (i) The evaluation was performed in an applicable area of the phantom depending on the type of device being tested. For devices worn about the ear during normal operation, both the left and right ear positions were evaluated at the centre frequency of the band at maximum power. The side, which produced the greatest SAR, determined which side of the phantom would be used for the entire evaluation. The positioning of the head worn device relative to the phantom was dictated by FCC OET bulletin 65 Supplement C.

(ii) For body worn devices or devices which can be operated within 20 cm of the body, the flat section of the phantom was used. The type of device being evaluated dictated the distance of the EUT to the outer surface of the phantom flat section.

b) The SAR was determined by a pre-defined procedure within the DASY4 software. The exposed region of the phantom was scanned near the inner surface with a grid spacing of 20mm x 20mm or appropriate resolution.

c) A 7x7x7 matrix was performed around the greatest spatial SAR distribution found during the area scan of the applicable exposed region. SAR values were then calculated using a 3-D spline interpolation algorithm and averaged over spatial volumes of 1 and 10 grams.

d) If the EUT had any appreciable drift over the course of the evaluation, then the EUT was re-evaluated. Any unusual anomalies over the course of the test also warranted a re-evaluation.

12. System Validation

Prior to the assessment, the system was verified in the flat region of the phantom.
A 900 MHz and 1800 MHz dipole was used to perform 850 MHz and 1900 MHz Body system validation respectively. A forward power of 250 mW was applied to the dipole and the system was verified to a tolerance of ±5% for the 900 MHz and 1800 MHz dipole respectively. The applicable verification (normalised to 1 Watt) is as follows:

Dipole Validation Kit	Target SAR 1g (W/kg)	Measured SAR 1g (W/kg)
D1800V2 / 264 (23/05/05)	37.00	36.69
D1800V2 / 264 (24/05/05)	37.00	37.08
D900V2 / 124 (25/05/05)	11.00	10.76

13. Simulated Tissues

The body mixture consists of water and glycol. Visual inspection is made to ensure air bubbles are not trapped during the mixing process. The mixture is calibrated to obtain proper dielectric constant (permittivity) and conductivity of the tissue.

Ingredient	Frequency
	900 MHz (850 MHz) Body
De-Ionised Water	50.75%
Sugar	48.21%
Salt	0.94%
Kathon	0.10%

Ingredient	Frequency
	1800 MHz (1900 MHz) Body
De-Ionised Water	69.79%
DGMBE	30.00%
Salt	0.20%

14. Tissue Parameters

The dielectric parameters of the fluids were verified prior to the SAR evaluation using a 58070C Dielectric Probe Kit and an 8753E network analyser. The dielectric parameters of the fluid are as follows:

Frequency (MHz)	Equivalent Tissue	Dielectric Constant ε_r	Conductivity σ (mho/m)
1800	Body	53.53	1.53
900	Body	53.49	1.02

15. DASY4 Systems Specifications

Robot System

Positioner:	Stäubli Unimation Corp. Robot Model: RX90L
Repeatability:	0.025 mm
No. of Axis:	6
Serial Number:	F00/SD89A1/A/01
Reach:	1185 mm
Payload:	3.5 kg
Control Unit:	CS7
Programming Language:	V+

Data Acquisition Electronic (DAE) System

Cell Controller

PC:	Dell Precision 340
Operating System:	Windows NT
Data Card:	DASY4 Measurement Server
Serial Number:	1080

Data Converter

Features:	Signal Amplifier, multiplexer, A/D converter and control logic.
Software:	DASY4 Software
Connecting Lines:	Optical downlink for data and status info. Optical uplink for commands and clock.

PC Interface Card

Function:	24 bit (64 MHz) DSP for real time processing Link to DAE3 16 nit A/D converter for surface detection system serial link to robot direct emergency stop output for robot.

E-Field Probe

Model:	ET3DV6
Serial No:	1528
Construction:	Triangular core fibre optic detection system
Frequency:	10 MHz to 3 GHz
Linearity:	±0.2 dB (30 MHz to 3 GHz)
Probe Length (mm):	337
Probe Diameter (mm):	12
Tip Length (mm):	10
Tip Diameter (mm):	6.8
Sensor X Offset (mm):	2.7
Sensor Y Offset (mm):	2.7
Sensor Z Offset (mm):	2.7

Phantom

Phantom:	SAM Phantom
Shell Material:	Fibreglass
Thickness:	2.0 ±0.1 mm

16. Validation Results – 900 MHz (850 MHz) Band (Body)

Date: 25 May 2005

16.1. System Validation

Validation of the system test configuration was carried out prior to testing.

Validation Dipole Type and Serial No.	Calibrated Value of SAR in 1g volume (W/kg) at 900 MHz	Measured Value of SAR in 1g volume (W/kg) at 900 MHz	Percentage Difference (≤5%)
D900V2 / 124	11.00	10.76	(-2.20%) Yes

A 900 MHz dipole was used to perform 850 MHz body system validation. This was possible as the device centre frequency is within ±100 MHz of the verification frequency.

15.2 Liquid Properties

Properties of the tissue simulating liquid were measured prior to testing.

Property	Target Value (900 MHz)	Measured/Calculated Value (900 MHz)	Percentage Difference (≤5%)
Relative Permittivity	55.00	53.49	(-2.74%) Yes
Conductivity	1.05	1.02	(-2.44%) Yes

15.3 Temperature Variation

The temperature of the laboratory and within the tissue simulating liquid for this test shall not exceed the range +15.0 ºC to +30.0 ºC.

The actual temperature measured at the beginning and end of each test was recorded and the maximum range is shown below:

Measurement	Maximum Temperature	Minimum Temperature
Laboratory	25.0	25.0
Tissue Simulating Liquid	25.0	24.8

17. Validation Results – 1800 MHz (1900 MHz) Band (Body)

Date: 23 May 2005

17.1. System Validation

Validation of the system test configuration was carried out prior to testing.

Validation Dipole Type and Serial No.	Calibrated Value of SAR in 1g volume (W/kg) at 1800 MHz	Measured Value of SAR in 1g volume (W/kg) at 1800 MHz	Percentage Difference (≤5%)
D1800V2 / 264	37.00	36.69	(-0.10%) Yes

An 1800 MHz dipole was used to perform 1900 MHz body system validation. This was possible as the device centre frequency is within ±100 MHz of the verification frequency.

16.2. Liquid Properties

Properties of the tissue simulating liquid were measured prior to testing.

Property	Target Value (1800 MHz)	Measured/Calculated Value (1800 MHz)	Percentage Difference (≤5%)
Relative Permittivity	53.30	53.53	(+0.43%) Yes
Conductivity	1.52	1.53	(+0.42%) Yes

16.3. Temperature Variation

The temperature of the laboratory and within the tissue simulating liquid for this test shall not exceed the range +15.0 ºC to +30.0 ºC.

The actual temperature measured at the beginning and end of each test was recorded and the maximum range is shown below:

Measurement	Maximum Temperature	Minimum Temperature
Laboratory	25.0	25.0
Tissue Simulating Liquid	24.9	24.7

18. Validation Results – 1900 MHz Band (Body)

Date: 24. May 2005

18.1. System Validation

Validation of the system test configuration was carried out prior to testing.

Validation Dipole Type and Serial No.	Calibrated Value of SAR in 1g volume (W/kg) at 1800 MHz	Measured Value of SAR in 1g volume (W/kg) at 1800 MHz	Percentage Difference (≤5%)
D1800V2 / 264	37.00	37.08	(+0.20%) Yes

An 1800 MHz dipole was used to perform 1900 MHz body system validation. This was possible as the device centre frequency is within ±100 MHz of the verification frequency.

16.2. Liquid Properties

Properties of the tissue simulating liquid were measured prior to testing.

Property	Target Value (1800 MHz)	Measured/Calculated Value (1800 MHz)	Percentage Difference (≤5%)
Relative Permittivity	53.30	53.53	(+0.43%) Yes
Conductivity	1.52	1.53	(+0.42%) Yes

16.3. Temperature Variation

The temperature of the laboratory and within the tissue simulating liquid for this test shall not exceed the range +15.0 ºC to +30.0 ºC.

The actual temperature measured at the beginning and end of each test was recorded and the maximum range is shown below:

Measurement	Maximum Temperature	Minimum Temperature
Laboratory	25.0	25.0
Tissue Simulating Liquid	24.9	24.7

19. Measurement Uncertainty

No measurement or test can ever be perfect and the imperfections give rise to error of measurement in the results. Consequently, the result of a measurement is only an approximation to the value of the measurand (the specific quantity subject to measurement) and is only complete when accompanied by a statement of the uncertainty of the approximation.

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

The uncertainty of the result may need to be taken into account when interpreting the measurement results.

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor, such that a confidence level of approximately 95% is maintained. For the purposes of this document “approximately” is interpreted as meaning “effectively” or “for most practical purposes”.

Measurement Type	Range	Confidence Level	Calculated Uncertainty
Specific Absorption Rate	850 MHz	95%	± 17.12%
Specific Absorption Rate	1900 MHz	95%	± 20.41%

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty, the published guidance of the appropriate accreditation body is followed.

Measurement uncertainties in SAR measurements are difficult to quantify due to several variables including biological, physiological, and environment. However, the estimated measurement uncertainties in SAR are less than 30%.

According to ANSI/IEEE C95.3, the overall uncertainties are difficult to assess and will vary with the type of meter and usage situation. However, accuracy’s of ±1 to 3 dB can be expected in practice, with greater uncertainties in near-field situations and at higher frequencies (shorter wavelengths), or areas where large reflecting objects are present. Under optimum measurement conditions, SAR measurement uncertainties of at least ±2 dB can be expected.

According to CENELEC, typical worst-case uncertainty of field measurements is ±5 dB. For well-defined modulation characteristics the uncertainty can be reduced to ±3 dB.

Measurement Uncertainty (Continued)

Specific Absorption Rate Uncertainty at 850 MHz, GPRS Modulation Scheme calculated in accordance with IEEE 1528-200X

Type	Source of uncertainty	+ Value	- Value	Probability Distribution	Divisor	c_i	Standard Uncertainty		υ_i or υ_{eff}	Note

CALIBRATION CERTIFICATE

Object(s) D1800V2 - SN:264

Calibration procedure(s) QA CAL-05.v2
Calibration procedure for dipole validation kits

Calibration date: April 15, 2004

Condition of the calibrated item In Tolerance (according to the specific calibration document)

This calibration statement documents traceability of M&TE used in the calibration procedures and conformity of the procedures with the ISO/IEC 17025 international standard.

All calibrations have been conducted in the closed laboratory facility: environment temperature 22 +/- 2 degrees Celsius and humidity < 75%.

Calibration Equipment used (M&TE critical for calibration)

Model Type	ID #	Cal Date (Calibrated by, Certificate No.)	Scheduled Calibration
Power meter EPM E442	GB37480704	6-Nov-03 (METAS, No. 252-0254)	Nov-04
Power sensor HP 8481A	US37292783	6-Nov-03 (METAS, No. 252-0254)	Nov-04
Power sensor HP 8481A	MY41092317	18-Oct-02 (Agilent, No. 20021018)	Oct-04
RF generator R&S SML-03	100698	27-Mar-2002 (R&S, No. 20-92389)	In house check: Mar-05
Network Analyzer HP 8753E	US37390585	18-Oct-01 (SPEAG, in house check Nov-03)	In house check: Oct 05

	Name	Function	Signature
Calibrated by:	Judith Mueller	Technician	
Approved by:	Katja Pokovic	Laboratory Director	

Date issued: April 21, 2004

This calibration certificate is issued as an intermediate solution until the accreditation process (based on ISO/IEC 17025 International Standard) for Calibration Laboratory of Schmid & Partner Engineering AG is completed.

DASY

Dipole Validation Kit

Type: D1800V2

Serial: 264

Manufactured: March 5, 2000
Calibrated: April 15, 2004

1. Measurement Conditions

The measurements were performed in the flat section of the SAM twin phantom filled with **head simulating solution** of the following electrical parameters at 1800 MHz:

Relative Dielectricity	**40.6**	± 5%
Conductivity	**1.36 mho/m**	± 5%

The DASY4 System with a dosimetric E-field probe ET3DV6 (SN:1507, Conversion factor 5.08 at 1800 MHz) was used for the measurements.

The dipole was mounted on the small tripod so that the dipole feedpoint was positioned below the center marking of the flat phantom section and the dipole was oriented parallel to the body axis (the long side of the phantom). The standard measuring distance was 10mm from dipole center to the solution surface. The included distance spacer was used during measurements for accurate distance positioning.

The coarse grid with a grid spacing of 15mm was aligned with the dipole. The 7x7x7 fine cube was chosen for cube integration.
The dipole input power (forward power) was 250 mW ± 3 %. The results are normalized to 1W input power.

2. SAR Measurement with DASY4 System

Standard SAR-measurements were performed according to the measurement conditions described in section 1. The results (see figure supplied) have been normalized to a dipole input power of 1W (forward power). The resulting averaged SAR-values measured with the dosimetric probe ET3DV6 SN:1507 and applying the advanced extrapolation are:

averaged over 1 cm^3 (1 g) of tissue:	**37.2 mW/g** ± 16.8 % (k=2)[1]
averaged over 10 cm^3 (10 g) of tissue:	**19.9 mW/g** ± 16.2 % (k=2)[1]

[1] validation uncertainty

3. Dipole Impedance and Return Loss

The impedance was measured at the SMA-connector with a network analyzer and numerically transformed to the dipole feedpoint. The transformation parameters from the SMA-connector to the dipole feedpoint are:

Electrical delay:	**1.201 ns**	(one direction)
Transmission factor:	**0.975**	(voltage transmission, one direction)

The dipole was positioned at the flat phantom sections according to section 1 and the distance spacer was in place during impedance measurements.

Feedpoint impedance at 1800 MHz:	Re{Z} = **46.9 Ω**
	Im {Z} = **-5.9 Ω**
Return Loss at 1800 MHz	**-23.3 dB**

4. Measurement Conditions

The measurements were performed in the flat section of the SAM twin phantom filled with **body simulating solution** of the following electrical parameters at 1800 MHz:

Relative Dielectricity	**52.6**	± 5%
Conductivity	**1.49 mho/m**	± 5%

The DASY4 System with a dosimetric E-field probe ET3DV6 (SN:1507, Conversion factor 4.61 at 1800 MHz) was used for the measurements.

The dipole was mounted on the small tripod so that the dipole feedpoint was positioned below the center marking of the flat phantom section and the dipole was oriented parallel to the body axis (the long side of the phantom). The standard measuring distance was 10mm from dipole center to the solution surface. The included distance spacer was used during measurements for accurate distance positioning.

The coarse grid with a grid spacing of 15mm was aligned with the dipole. The 7x7x7 fine cube was chosen for cube integration.
The dipole input power (forward power) was 250 mW ± 3 %. The results are normalized to 1W input power.

5. SAR Measurement with DASY4 System

Standard SAR-measurements were performed according to the measurement conditions described in section 4. The results (see figure supplied) have been normalized to a dipole input power of 1W (forward power). The resulting averaged SAR-values measured with the dosimetric probe ET3DV6 SN:1507 and applying the advanced extrapolation are:

averaged over 1 cm^3 (1 g) of tissue:	**37.0 mW/g** ± 16.8 % $(k=2)^2$
averaged over 10 cm^3 (10 g) of tissue:	**20.0 mW/g** ± 16.2 % $(k=2)^2$

6. Dipole Impedance and Return Loss

The dipole was positioned at the flat phantom sections according to section 4 and the distance spacer was in place during impedance measurements.

Feedpoint impedance at 1800 MHz:	Re{Z} = **44.3 Ω**
	Im {Z} = **-5.7 Ω**
Return Loss at 1800 MHz	**-21.3 dB**

7. Handling

Do not apply excessive force to the dipole arms, because they might bend. Bending of the dipole arms stresses the soldered connections near the feedpoint leading to a damage of the dipole.

8. Design

The dipole is made of standard semirigid coaxial cable. The center conductor of the feeding line is directly connected to the second arm of the dipole. The antenna is therefore short-circuited for DC-signals.

9. Power Test

After long term use with 40W radiated power, only a slight warming of the dipole near the feedpoint can be measured.

CALIBRATION CERTIFICATE

Object(s) D900V2 - SN 124

Calibration procedure(s) QA CAL-05.v2
Calibration procedure for dipole validation kits

Calibration date: May 13, 2003

Condition of the calibrated item In Tolerance (according to the specific calibration document)

This calibration statement documents traceability of M&TE used in the calibration procedures and conformity of the procedures with the ISO/IEC 17025 international standard.

All calibrations have been conducted in the closed laboratory facility: environment temperature 22 +/- 2 degrees Celsius and humidity < 75%.

Calibration Equipment used (M&TE critical for calibration)

DASY

Dipole Validation Kit

Type: D900V2

Serial: 124

Manufactured: July 4, 2001
Calibrated: May 13, 2003

1. Measurement Conditions

The measurements were performed in the flat section of the SAM twin phantom filled with head simulating solution of the following electrical parameters at 900 MHz:

Relative Dielectricity	**42.1**	± 5%
Conductivity	**0.95 mho/m**	± 5%

The DASY4 System with a dosimetric E-field probe ET3DV6 (SN:1507, Conversion factor 6.6 at 900 MHz) was used for the measurements.

The dipole was mounted on the small tripod so that the dipole feedpoint was positioned below the center marking of the flat phantom section and the dipole was oriented parallel to the body axis (the long side of the phantom). The standard measuring distance was 15mm from dipole center to the solution surface. The included distance holder was used during measurements for accurate distance positioning.

The coarse grid with a grid spacing of 15mm was aligned with the dipole. The 7x7x7 fine cube was chosen for cube integration.
The dipole input power (forward power) was 250mW ± 3 %. The results are normalized to 1W input power.

2. SAR Measurement with DASY4 System

Standard SAR-measurements were performed according to the measurement conditions described in section 1. The results (see figure supplied) have been normalized to a dipole input power of 1W (forward power). The resulting averaged SAR-values measured with the dosimetric probe ET3DV6 SN:1507 and applying the advanced extrapolation are:

averaged over 1 cm^3 (1 g) of tissue:	**10.6 mW/g** ± 16.8 % (k=2)[1]
averaged over 10 cm^3 (10 g) of tissue:	**6.76 mW/g** ± 16.2 % (k=2)[1]

[1] validation uncertainty

3. Dipole Impedance and Return Loss

The impedance was measured at the SMA-connector with a network analyzer and numerically transformed to the dipole feedpoint. The transformation parameters from the SMA-connector to the dipole feedpoint are:

Electrical delay:	**1.381 ns**	(one direction)
Transmission factor:	**0.989**	(voltage transmission, one direction)

The dipole was positioned at the flat phantom sections according to section 1 and the distance holder was in place during impedance measurements.

Feedpoint impedance at 900 MHz:	Re{Z} = **50.3 Ω**
	Im {Z} = **-6.4 Ω**
Return Loss at 900 MHz	**-24.0 dB**

4. Measurement Conditions

The measurements were performed in the flat section of the SAM twin phantom filled with body simulating solution of the following electrical parameters at 900 MHz:

Relative Dielectricity	**53.5**	± 5%
Conductivity	**1.03 mho/m**	± 5%

The DASY4 System with a dosimetric E-field probe ET3DV6 (SN:1507, Conversion factor 6.3 at 900 MHz) was used for the measurements.

The dipole was mounted on the small tripod so that the dipole feedpoint was positioned below the center marking of the flat phantom section and the dipole was oriented parallel to the body axis (the long side of the phantom). The standard measuring distance was 15mm from dipole center to the solution surface. The included distance holder was used during measurements for accurate distance positioning.

The coarse grid with a grid spacing of 15mm was aligned with the dipole. The 7x7x7 fine cube was chosen for cube integration.
The dipole input power (forward power) was 250mW ± 3 %. The results are normalized to 1W input power.

5. SAR Measurement with DASY4 System

Standard SAR-measurements were performed according to the measurement conditions described in section 4. The results (see figure supplied) have been normalized to a dipole input power of 1W (forward power). The resulting averaged SAR-values measured with the dosimetric probe ET3DV6 SN:1507 and applying the advanced extrapolation are:

averaged over 1 cm^3 (1 g) of tissue:	**11.0 mW/g** ± 16.8 % $(k=2)^2$
averaged over 10 cm^3 (10 g) of tissue:	**7.12 mW/g** ± 16.2 % $(k=2)^2$

6. Dipole Impedance and Return Loss

The dipole was positioned at the flat phantom sections according to section 4 and the distance holder was in place during impedance measurements.

Feedpoint impedance at 900 MHz:	Re{Z} = **46.2 Ω**
	Im {Z} = **-8.2 Ω**
Return Loss at 900 MHz	**-20.6 dB**

7. Handling

Do not apply excessive force to the dipole arms, because they might bend. Bending of the dipole arms stresses the soldered connections near the feedpoint leading to a damage of the dipole.

8. Design

The dipole is made of standard semirigid coaxial cable. The center conductor of the feeding line is directly connected to the second arm of the dipole. The antenna is therefore short-circuited for DC-signals.

9. Power Test

After long term use with 100W radiated power, only a slight warming of the dipole near the feedpoint can be measured.
