4. CALIBRATION AND UNCERTAINTY

4.1. MEASURING INSTRUMENT CALIBRATION

The measuring equipment utilized to perform the tests documented in this report has been calibrated in accordance with the manufacturer's recommendations, and is traceable to recognized national standards.

4.2. SAMPLE CALCULATION

Where relevant, the following sample calculation is provided:

$$\begin{aligned}\text{Field Strength (dBuV/m)} &= \text{Measured Voltage (dBuV)} + \text{Antenna Factor (dB/m)} + \\ &\text{Cable Loss (dB)} - \text{Preamplifier Gain (dB)} \\ 36.5 \text{ dBuV} + 18.7 \text{ dB/m} + 0.6 \text{ dB} - 26.9 \text{ dB} &= 28.9 \text{ dBuV/m}\end{aligned}$$

4.3. MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the apparatus:

Test	Uncertainty
Conducted Emissions (0.150-30MHz)	+/- 2.37 dB
Radiated Emissions (30-1000 MHz)	+/- 6.04 dB (3m)
Radiated Emissions (1-6 GHz)	+/- 5.96 dB
Radiated Emissions (6-18 GHz)	+/- 6.10 dB
Radiated Emissions (18-26 GHz)	+/- 6.81 dB

Uncertainty figures are valid to a confidence level of 95%.

5. EQUIPMENT UNDER TEST

5.1. DESCRIPTION OF EUT

The EUT, wECG p/n 989803192761 and 989803194341 are wireless ECG modules that are part of the MR400 Patient Monitoring Device for MRI Environments. The wECG contains a custom designed radio that is DSSS, operating under a GFSK modulation.

The custom radio contains a radio chip for the ECG communication (2435-2480 MHz). The radio module contains a chip antenna with a 1.6 dBi gain.

The only difference between the REF 989803192761 and 989803194341 are the operating frequencies:

Color codes

Low Frequency
Mid Frequency
High Frequency

3rd generation ECG module

****Frequency list below is forward channel (i.e. ECG transmit, MR400 receive)**

Network	Primary	Secondary	
1	2453.0	2461.0	Part Number: 989803192761 Description: Wireless ECG Patient Module (Gen 3) 1-5
2	2455.0	2463.0	
3	2454.0	2462.0	
4	2458.0	2466.0	
5	2472.0	2480.0	
6	2436	2444	Part Number: 989803194341 Description: Wireless ECG Patient Module (Gen 3) 6-10
7	2437	2445	
8	2440	2448	
9	2435	2443	
10	2469	2477	

No other differences exist between the two modules. The devices use the same schematic design, PCB layout and software.

Note – The module was originally intended to accommodate all 10 network channels. However, the module has 5 Network Channel ID LEDs for the user. Due to this, Invivo created two parts numbers to maintain the 5 Network Channel ID LEDs. P/N 989803192761 will host Networks 1-5 and P/N 989803194341 will host Networks 6-10. The tested unit accommodates all 10 networks.

5.2. MAXIMUM OUTPUT E-FIELD STRENGTH

The transmitter has a maximum output peak E-field as follows:

Frequency Range (MHz)	Mode	PEAK Output E-field Strength (dBuV/m)	AVERAGE Output E-field Strength (dBuV/m)
2435-2480	GFSK	92.71	75.55

5.3. DESCRIPTION OF AVAILABLE ANTENNAS

This radio utilizes a chip antenna, manufactured by Mitsubishi (model AH11DG) and has an antenna gain of 1.6 dBi.

5.4. SOFTWARE AND FIRMWARE

The firmware installed in the EUT during testing was FW031 version 00.01.03 and FW040 version 00.00.01.

5.5. WORST-CASE CONFIGURATION AND MODE

The worst-case data rate is determined to be as follows, based on input from the manufacturer of the radio.

All final tests in the GFSK mode were made at 1 Mb/s.

For radiated emissions below 1 GHz and 18-26 GHz, the worst-case configuration is determined to be the mode and channel with the highest field strength.

The fundamental of the EUT was investigated in three orthogonal orientations X, Y, Z and it was determined that Y orientation (EUT on its side) was worst-case orientation; therefore, all final radiated testing was performed with the EUT in the Y orientation.
