Dates of Tests: January 04 ~10, 2012 Test Report S/N: LR500111201D Test Site : LTA CO., LTD.

CERTIFICATION OF COMPLIANCE

FCC ID IC APPLICANT S7A-SP04 8154A-SP04 Sena Technologies, Inc.

Equipment Class	:	Part 15 Spread Spectrum Transmitter (DSS)
Manufacturing Description	:	Bluetooth Stereo Motorcycle Headset
Manufacturer	:	Sena Technologies, Inc.
Model name	:	SMH5
Test Device Serial No.:	:	Identical prototype
Rule Part(s)	:	FCC Part 15.247 Subpart C; ANSI C-63.4-2003
		RSS-210 and ISSUE No. :8 Date :2010
Frequency Range	:	2402 ~ 2480MHz
RF power	:	Max 7.25 dBm - Conducted
Data of issue	:	January 16 , 2012

This test report is issued under the authority of:

Hyun-Chae You, Manager

The test was supervised by:

Ki-Hun Cho, Test Engineer

This test result only responds to the tested sample. It is not allowed to copy this report even partly without the allowance of the test laboratory. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government.

NVLAP LAB Code .: 200723-0

2-2 Equipment Under Test (EUT)

Trade name	:	Bluetooth Stereo Motorcycle Headset
Model name	:	SMH5
Serial number	:	Identical prototype
Date of receipt	:	December 27, 2011
EUT condition	:	Pre-production, not damaged
Antenna type	:	Chip antenna (M/N: SENA_D02) Max Gain 3.9 dBi
Frequency Range	:	2402 ~ 2480MHz
RF output power	:	Max. 7.25 dBm - Conducted
Number of channels	:	79
Duty cycle	:	80.90 %
Channel spacing	:	1MHz
Channel Access Protocol	:	Frequency Hopping Spread Spectrum (FHSS)
Type of Modulation	:	Basic Mode(GFSK), EDR Mode(Pi/4 DQPSK, 8DPSK)
Power Source	:	3.7 Vdc from Internal Battery (Li-Ion Polymer Battery)
Firmware Version	:	V1.0.0

<u>Note 1</u> : C=Complies NC=Not Complies NT=Not Tested NA=Not Applicable				
<u>Note 2</u> : The data in this test report are traceable to the national or international standards.				
<u>Note3</u> : This device is only operated by DC				

Note 1: Antenna Requirement

 \rightarrow The Sena Technologies, Inc. FCC ID:S7A-SP04 unit complies with the requirement of §15.203.

The antenna type is the Chip antenna

Note 2: The sample was tested according to the following specification: FCC Parts 15.247; ANSI C-63.4-2003

RSS-210 and ISSUE No.: 8 Date: 2010

3.2 Transmitter requirements

3.2.1 Carrier Frequency Separation

Procedure:

The carrier frequency separation was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function enabled.

After the trace being stable, the reading value between the peaks of the adjacent channels using the marker-delta function was recorded as the measurement results.

The spectrum analyzer is set to:

Span = 2~ 3 MHz (wide enough to capture the peaks of two adjacent channels)RBW = 10 kHz (1% of the span or more)Sweep = autoVBW = 10 kHzDetector function = peakTrace = max holdTrace = max hold

Measurement Data:

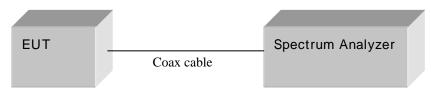

Test Results		
Carrier Frequency Separation (MHz)	Result	
0.999	Complies	

- See next pages for actual measured spectrum plots.

Minimum Standard:

The EUT shall have hopping channel carrier frequencies separated by a minimum of 25kHz or two-thirds of 20dB bandwidth of the hopping channel, whichever is greater.

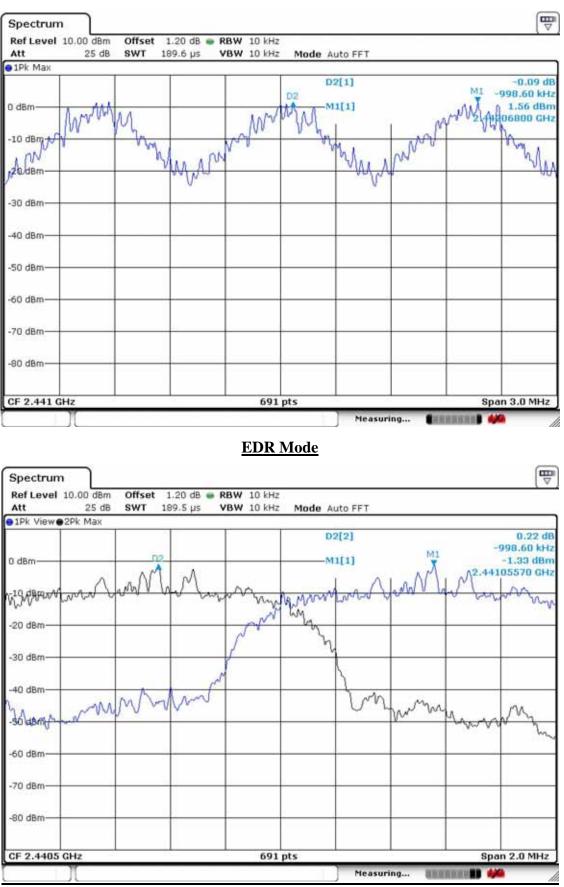

Measurement Setup

Carrier Frequency Separation

Basic Mode

3.2.2 Number of Hopping Frequencies

Procedure:

The number of hopping frequencies was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function enabled.

To get higher resolution, four frequency ranges within the $2400 \sim 2483.5$ MHz FH band were examined.

The spectrum analyzer is set to:

Frequency rangeStart = 2400.0MHz,Stop = 2483.5 MHzRBW = 100 kHz (1% of the span or more)Sweep = autoVBW = 100 kHz (VBWRBW)Detector function = peakTrace = max holdSpan > 40MHz

Measurement Data: Complies

Total number of Hopping Channels	79

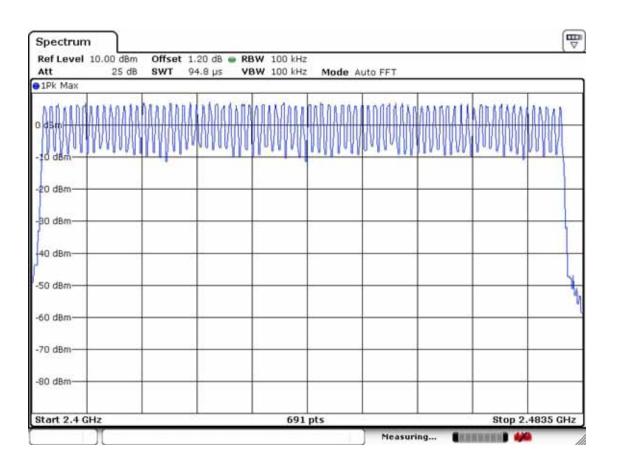

- See next pages for actual measured spectrum plots.

Minimum Standard:

At least 15 hopes

Measurement Setup

Same as the Chapter 3.2.1 (Figure 1)

Number of Hopping Frequencies

3.2.3 20 dB Bandwidth

Procedure:

The bandwidth at 20 dB below the highest inband spectral density was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function disabled at the highest, middle and the lowest available channels..

After the trace being stable, Use the marker-to-peak function to set the marker to the peak of the emission. Use the marker-delta function to measure 20dB down one side of the emission. Reset the marker-delta function, and move the marker to the other side of the emission, until it is (as close as possible to) even with the reference marker level. The marker-delta reading at this point is the 20 dB bandwidth of the emission.

The spectrum analyzer is set to:

Center frequency = the highest, middle and the lowest channels					
Span = 3 MHz (approximately 2 or 3 times of the 20 dB bandwidth)					
RBW = 30 kHz		Sweep = auto			
VBW = 30 kHz (VBW	RBW)	Detector function = peak			
Trace = max hold	Trace = max hold				

Measurement Data: Basic Mode

Frequency	Channel No	Test Results(MHz)		
(MHz)	Channel No.	20dB Bandwidth	99% Bandwidth	
2402	0	0.842	0.864	
2441	39	0.838	0.864	
2480	78	0.890	0.868	

Measurement Data: EDR Mode

Frequency	Channel Na	Test Results(MHz)		
(MHz)	Channel No.	20dB Bandwidth	99% Bandwidth

3.2.4 Time of Occupancy (Dwell Time)

Procedure:

The dwell time was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function enabled.

The spectrum analyzer is set to:	
Center frequency = 2441 MHz	Span = zero
RBW = 1 MHz	VBW = 1 MHz (VBW RBW)
Trace = max hold	Detector function = peak

Measurement Data:

Mode	Number of transmission ina 31.6s (79Hopping*0.4)	Length of Transmission Time (msec)	Result (msec)	Limit (msec)
DH1	30(Times / 3sec) *10.533 = 315.99	0.536	169.37	400
DH3	15(Times / 3sec) *10.533 = 158.00	1.797	283.93	400

EDR 3Mbps DH5	10(Times / 3sec) *10.533 = 105.33	3.051	321.36	400

- See next pages for actual measured spectrum plots.

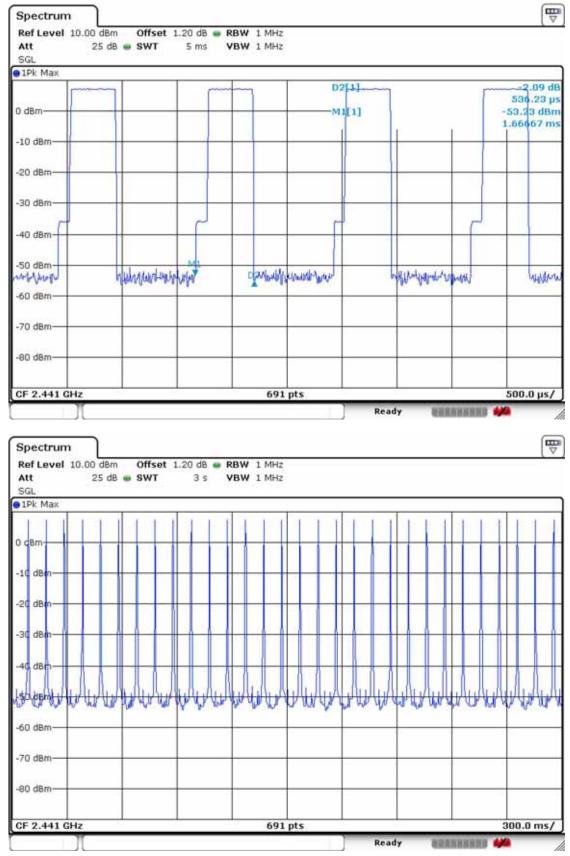

- dwell time = {(number of hopping per second / number of slot) x duration time per channel} x 0.4 ms

Minimum Standard:

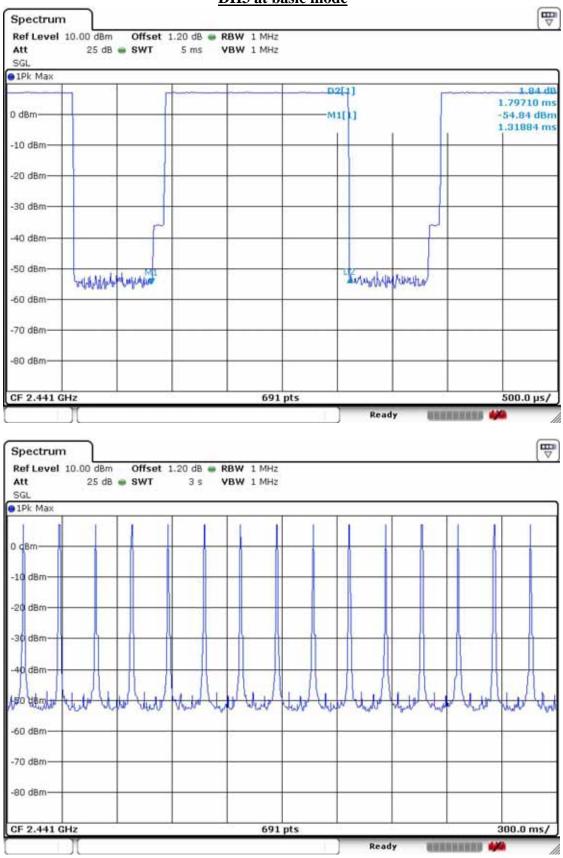

0.4 seconds within a 30 second period per any frequency

Measurement Setup

Same as the Chapter 3.2.1 (Figure 1)

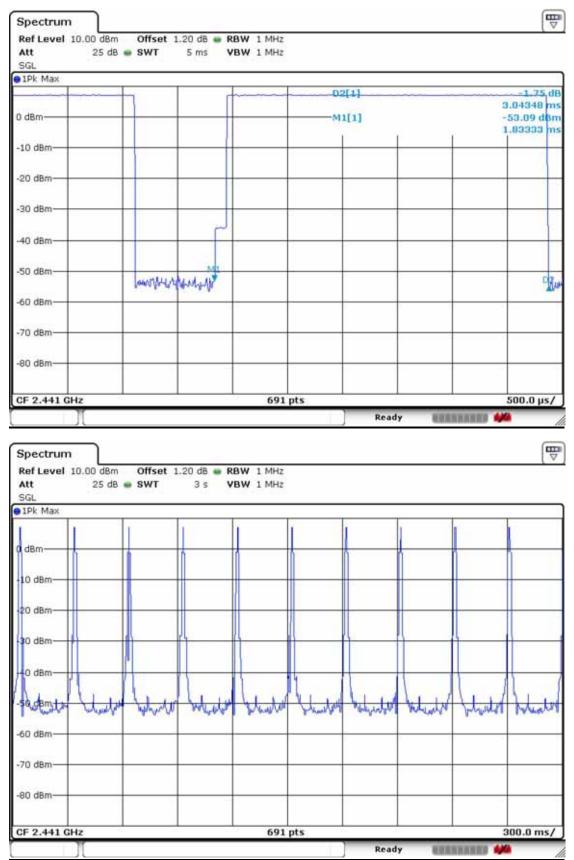

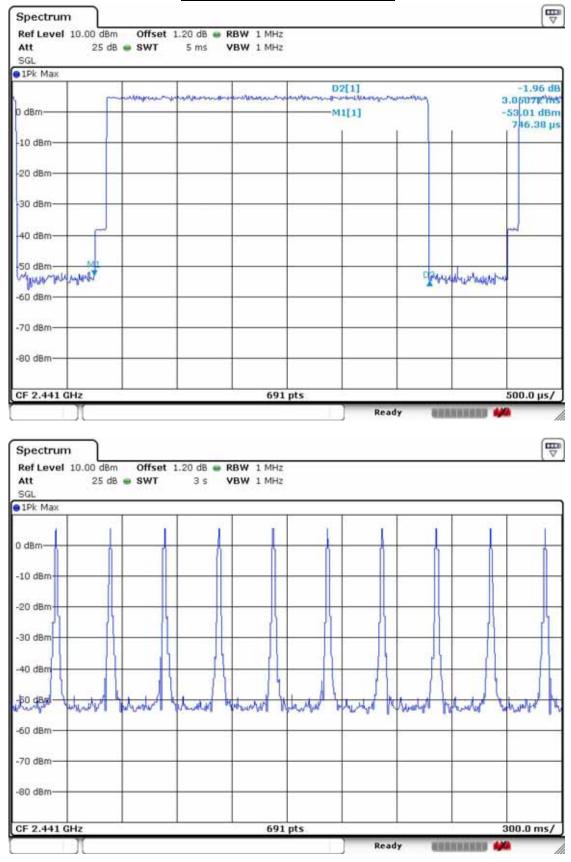

DH1 at basic mode

DH3 at basic mode

DH5 at EDR mode with 3Mbps

3.2.5 Transmitter Output Power

Procedure:

The peak output power was measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function disabled at the highest, middle and the lowest available channels..

After the trace being stable, Use the marker-to-peak function to set the marker to the peak of the emission. The indicated level is the peak output power.

Center frequency = the highest, middle and the lowest channels				
Span = 10 MHz (approximately 5 times of the 20 dB bandwidth)				
RBW = 3 MHz (greater than the 20dB bandwidth of the emission being measured)				
VBW = 3 MHz (VBW	RBW)	Detector function = peak		
Trace = max hold Sweep = auto

3.2.6 Band Edge

Procedure:

The bandwidth at 20dB down from the highest inband spectral density is measured with a spectrum analyzer connected to the antenna terminal, while EUT had its hopping function disabled at the highest, middle and the lowest available channels.

After the trace being stable, Use the marker-to-peak function to measure 20 dB down both sides of the intentional emission.

The spectrum analyzer is set to:					
Center frequency = the highest, middle and the lowest channels					
RBW = 100 kHz	VBW = 100 kHz				
Span = 10~30 MHz	Detector function = peak				
Trace = max hold	Sweep = auto				

Measurement Data: Complies

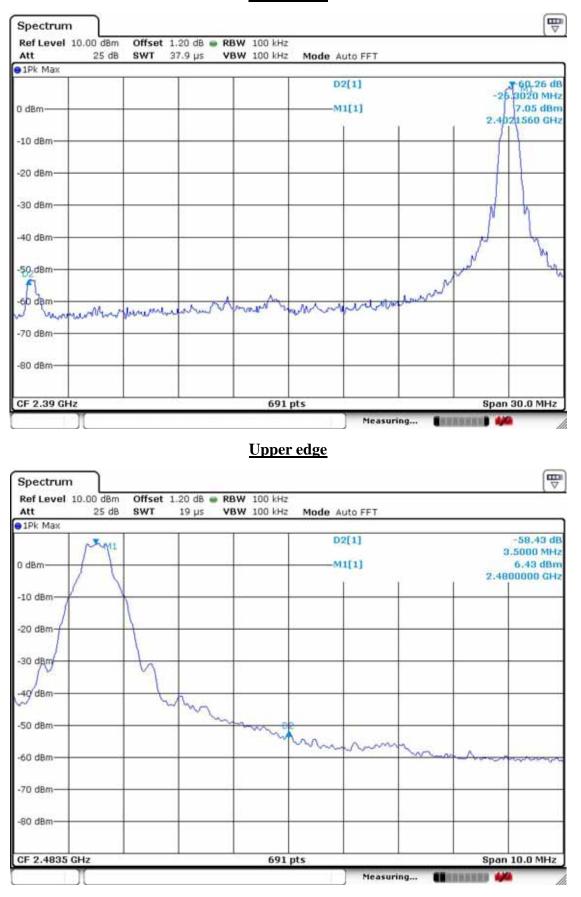

- All conducted emission in any 100kHz bandwidth outside of the spread spectrum band was at least 20dB lower than the highest inband spectral density. Therefore the applying equipment meets the requirement.
- See next pages for actual measured spectrum plots.

Minimum Standard:> 20 dBc

3.2.7 Field Strength of Harmonics - Transmitter

Procedure:

The EUT was placed on a 0.8m high wooden table inside a shielded enclosure. An antenna was placed near the EUT and measurements of frequencies and amplitudes of field strengths were recorded for reference during final measurements. For final radiated testing, measurements were performed in OATS. Measurements were performed with the EUT oriented in 3 orthogonal axis and rotated 360 degrees to determine worst-case orientation for maximum emissions.

- (a) In the frequency range of 9kHz to 30 MHz, magnetic field is measured with Loop Test Antenna. The Test Antenna is positioned with its plane vertical at 1m distance from the EUT. The center of the Loop Test Antenna is 1m above the ground. During the measurement the Loop Test Antenna rotates about its vertical axis for maximum response at each azimuth about the EUT.
- (b) In the frequency range above 30MHz, Bi-Log Test Antenna (30MHz to 1GHz) and Horn Test Antenna (above 1GHz) are used. Test Antenna is 3m away from the EUT. Test Antenna height is carried from 1m to 4m above the ground to determine the maximum value of the field strength. The emission levels at both horizontal and vertical polarizations should be tested.

VBW

RBW

Detector function = peak

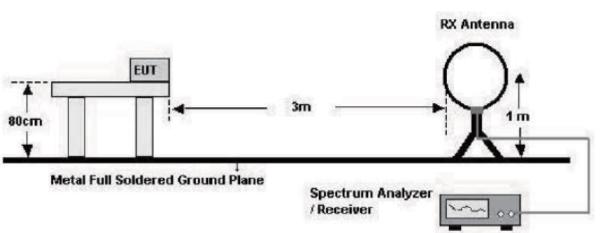

Sweep = auto

The spectrum analyzer is set to:

Center frequency = the worst channel Frequency Range = 10 MHz ~ 10th harmonic. RBW = 100 kHz (10MHz ~ 1 GHz)

 $= 1 \text{ MHz} \quad (1 \text{ GHz} \sim 10^{\text{th}} \text{ harmonic})$ Span = 100 MHz

Trace = max hold

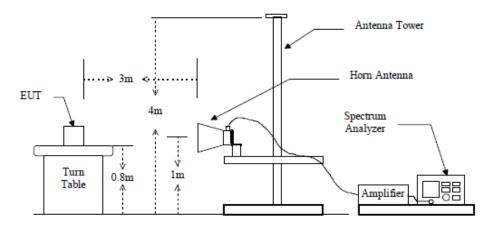

below 30MHz

below 1GHz (30MHz to 1GHz)

above 1GHz

Measurement Data: Complies

- See next pages for actual measured data.
- No other emissions were detected at a level greater than 20dB below limit

Frequency (MHz)	Limit (uV/m) @ 3m
0.009 ~ 0.490	2400/F(kHz) (@ 300m)
0.490 ~ 1.705	24000/F(kHz) (@ 30m)

Measurement Data:

- No other emissions were detected at a level greater than 20dB below limit.

- D.C.F (Duty Cycle Correction Factor) = 20log(The worst Case DWELL Time/100ms)

 $= 20\log(3.043 \text{ ms}/100 \text{ ms}) = -30.33$

Radiated Emissions – BT Pairing + Charging

Remarks: C.F (Correction Factor) = Antenna factor + Cable loss - Preamp gain

3.2.8 Field Strength of Harmonics - Receivers

Definition:

The field strength of emissions from intentional radiators was measured. In case of the air temperature of the test site is out of the range is 10 to 40°C before the testing proceeds the warm-up time of EUT maintain adequately

Test method	:	FCC Part 15.209				
Frequency Range	:	25 MHz ~ 10^{th} harmonic.				
Bandwidth	:	120 kHz (F < 1GHz)	1 MHz (F > 1 GHz)			
Distance of antenna	:	3 meters				
Test mode	:	Rx mode				
Result	:	Complies				

Measurement Data:

- Refer to the next page.
- No other emissions were detected at a level greater than 20dB below limit
- It gave the worse case emissions.

Field Strength Limit

Part 15.209 LIMIT:

Frequency (MHz)	Limit (uV/m) @ 3m
0.009 ~ 0.490	2400/F(kHz)
0.490 ~ 1.705	24000/F(kHz)
1.705 ~ 30	30
30 ~ 88	100 **
88 ~ 216	150 **
216 ~ 960	200 **
Above 960	500

** Except as provided in 15.209(g), fundamental emissions from intentional radiators operating under this Section shall not be located in the frequency bands 54-72 MHz, 76-88MHz, 174-216MHz or 470-806MHz. However, operation within these frequency bands is permitted under other sections of this Part, e.g. 15.231 and 15.241.

Measurement Data:

No other emissions were detected at a level greater than 20dB below limit.

3.2.9 AC Conducted Emissions

Procedure:

The conducted emissions are measured in the shielded room with a spectrum analyzer in peak hold. While the measurement, EUT had its hopping function disabled at the middle channels in line with Section 15.31(m). Emissions closest to the limit are measured in the quasi-peak mode (QP) with the tuned receiver using a bandwidth of 9 kHz. The emissions are maximized further by cable manipulation and Exerciser operation. The highest emissions relative to the limit are listed.

Measurement Data: Complies

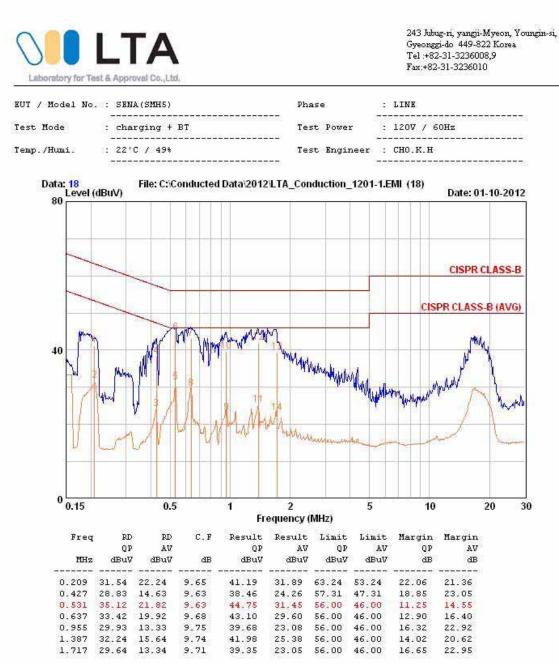

- Refer to the next page.
- No other emissions were detected at a level greater than 20dB below limit
- It gave the worse case emissions

Minimum Standard: FCC Part 15.207(a)/EN 55022

Frequency Range	Conducted Limit (dBuV)				
(MHz)	Quasi-Peak	Average			
0.15 ~ 0.5	66 to 56 *	56 to 46 *			
0.5 ~ 5	56	46			
5 ~ 30	60	50			

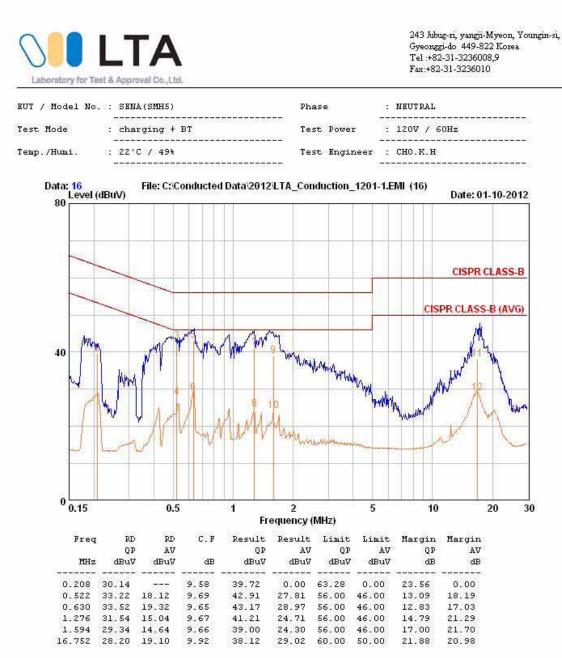

* Note: The limits will decrease with the frequency logarithmically within 0.15MHz to 0.5MHz

Radiated Emissions – BT Paring + Charging LINE

Remarks: C.F (Correction Factor) = Insertion loss + Cable loss

Radiated Emissions – BT Pairing + Charging NEUTRAL

Remarks: C.F (Correction Factor) = Insertion loss + Cable loss
