## Section 10. Maximum Permissible Exposure

## MPE estimate is given per 2.1091 of FCC Rules:

Calculation Equation:

$$
d=0.282 \times \frac{10^{\frac{P+G}{20}}}{\sqrt{S}}
$$

Where, P--max. Output Power, G—Antenna Gain and S—Power Density Factor from §1.1310.

Plug all three items into the equation, and yields,

| Power Density <br> MPE Limit <br> $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ | Output <br> Power <br> $(\mathrm{dBm})$ | Server <br> Antenna <br> Gain $(\mathrm{dBi})$ | Donor <br> Antenna <br> Gain $(\mathrm{dBi})$ | Server MPE <br> Distance <br> $(\mathrm{cm})$ | Donor MPE <br> Distance <br> $(\mathrm{cm})$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |

NOTE:
For mobile or fixed location transmitters, the minimum separation distance is $\mathbf{2 0} \mathbf{~ c m}$, even if calculations indicate that the MPE distance would be less.

N/A FOR THIS CASE ----AMPLIFIER ONLY, NO ATENNNA PRESENT.
