

Andrew Corporation, Base Station Subsystems Group

FCC Class II Permissive Change Request Letter

09/28/2018

To FCC:

RE: FCC Class II Permissive Change Request for Company:

Andrew Corporation, Base Station Subsystems Group (Part of Commscope Corporation)

We are submitting an application for a class II permissive change, per 47 CFR, 2.1043(b)(1), to the FCC approval of the Company Name: **formerly Andrew Corporation, Part of Commscope Corporation**

Product description: RRH 2x40W 700MHz RF101002 FCC ID: **S8L-RRH700L1**

Original Grant date **6/22/2010**

The FW of the product has been updated in order to support NB-IoT guard band carriers. New TX digital channel filters has been implemented, increasing the number of taps, with wider passband frequency keeping a sufficiently narrow transition bandwidth. This change is being submitted due to the expected increase of TX signal occupied bandwidth.

Sincerely,

Gerald Reynolds
