Model	MC75
FCC ID	S9E-NOMADWAN
Agent	Northwest EMC, Inc.
Approval Type	Original
Equipment Class	PCS Licensed Base Station Transmitter
Rule Part	22H, 24E

Overview

This application is for a single limited modular approval of the M/N: MC75 radio in Tripod's host PDA, M/N: Nomad. The MC75 is a GSM/GPRS/EDGE radio that operates in the cellular and PCS bands. This radio will be collocated with a previously approved 802.11(b)/(g) radio FCC ID: S9E-NOMADWF and a previously approved Bluetooth radio FCC ID: S9E-NOMADBT. Please note, the Nomad host PDA is referred to as the Eagle through out the test report data. Eagle is Tripod's internal name for the device; Nomad is the marketing name. The FCC IC ID: for the WAN radio is S9E-NOMADWAN.

MPE estimates for the collocated radios are provided with this application. The radios are housed in a ruggedized, waterproof host computer. The host PDA can operate off of battery power or while charging, indirectly connected to the AC Mains.

The radio utilizes a single integral antenna. This configuration satisfies the requirements of 47 CFR 15.203.

Confidentiality requested for allowed files. Request is properly addressed and referenced.

Recommendation

All items have been resolved and completed to my satisfaction; therefore I recommend this application for approval.
