re: Model BSC1001

- i. The hopping sequence is pseudorandom, all channels are used equally on average, the receiver input bandwidth is approximately equal to the transmit bandwidth and the receiver hops in sequence with the transmitted signal.
- ii. The system is designed to comply with all the regulations in 15.247 when the transmitter is presented with a continuous data.
- iii. The system does not coordinate its channel selection/hopping sequence with other frequency hopping systems for the express purpose of avoiding the simultaneous occupancy of individual hopping frequencies by multiple transmitters.

A handwritten signature in black ink that reads "Gregory C Berlin". The signature is written in a cursive, flowing style.
