Attn: Director of Certification

In response to your request detailing the similarity between the Siren-Strobe models SS470 and SSC1000, these products are essentially the same with exceptions of the power input terminals and labeling.

The SS470 uses a terminal block for attaching wire leads with screws from an outboard power supply. The SSC1000 uses a 2.5mm DC input jack to accommodate a power input plug from an outboard power supply. Labels differ due to unique model numbers and differing UL requirements.

The power requirements to operate the SS470 and SSC1000 are the same. The SS470 and SSC1000 are the same in all other respects.

Sincerely,

A handwritten signature in black ink, appearing to read "Larry Dodds", is written over a horizontal line.

Larry Dodds
