For equipment containing an AGN3012MP-11 module, channel restriction to meet regulatory requirements is a function of country code and channel list programmed into EEPROM during manufacturing. For AGN3012MP-11 sold in the FCC/IC regulatory domains, the US ISO country code is programmed into EEPROM along with a channel list that limits 2.4 GHz channels to 1 through 11 (2412-2462 MHz) during the manufacturing process. EEPROM programmatic change or override is not provided as an end-user software option.
