

RF Exposure Evaluation

A calculation based on the **FCC's Evaluating Compliance with FCC Guidelines for Human Exposure to Radiofrequency Electromagnetic Fields (Edition 97-01)** appears below.

Maximum EIRP = 18.4 dBm = 69.2 mW

The limit for General Population/Uncontrolled Exposure is

$$S \text{ [mW/cm}^2\text{]} = f/1500 = 902\text{[MHz]}/1500 = 0.6013$$

The distance from the antenna at which this radiation level will be reached is

$$R = \text{SQRT}(EIRP/4\pi S)$$

$$R = \text{SQRT}(914.1 / (4\pi \times 0.6013)) = 3.03\text{cm}$$

RESULTS

The minimum distance from the antenna at which the power density is below the limit for General Population/Uncontrolled Exposure is 3.03cm.
