Re: Request for Modular Approval

Gentlemen:

This letter is to comply with Public Notice DA 00-1407 in providing a formal request for modular approval of FCC ID SAPMESSENGER on behalf of Saflok.

Please see attached document addressing items 1 – 8 of the Public Notice mentioned above.

Sincerely,

Michael Buchholz
Senior EMC Manager

Items 1 – 8 of Public Notice DA 00-1407.

1) The transmitter module has its own RF shielding.

2) See the following:

“The Saflok modular transmitter has buffered modulation/data inputs. The microcontroller on the transmitter module stores data that comes to it from the serial port and manages the RF output, including control of the amplifier and antenna switch.”

3) See the following:

“The Saflok modular transmitter has its own power supply regulation on the PCB. This regulator’s output powers all of the components on the PCB that require a supply voltage.”

4) The antenna is permanently attached to the PCB.

5) All testing was performed on the stand-alone module.

6) See the following:

“The Saflok modular transmitter will be labeled with its own FCC ID number, and, if the FCC ID is not visible when the module is installed inside another device, then the outside of the device into which the module is installed will also display a label referring to the enclosed module.”

7) The modular transmitter will be assured to comply with 47 CFR 15.247. The installation manual is included in the application.

8) RF Exposure requirements under 15.247 have been addressed. An MPE calculation is included in the application.
