EG59 USER MANUAL

Main Features:

You can do much more with phone then make and receive a call.

Bluetooth Wireless

Your phone supports Bluetooth wireless connection. You connect your phone with an optional Bluetooth headset or Bluetooth car kit to make hands free calls, or with a set of Bluetooth stereo headphones to listen to music stored on your phone.

Music player

You can manually load music files by attaching your phone to the computer as a removable storage device. Use an optional set of Bluetooth stereo headphones to listen to music stored on your phone. Use an optional removable TF memory card with your phone to store even more songs.

Photos

Your phone is designed to be used in a camera mode. Just aim and shoot to take a photo, you can send to your friends.

Videos

Your phone can record videos in multimedia.

Alarm

Your phone's alarm can work when the phone is powered on or off, which helps you not to miss every important moment of your life.

Large Capacity Phonebook

Up to 500 records can be stored in your phone's phonebook. Each record can have name, mobile number, home number, office number and other contents.

Safety information

For safety, use only an adapter approved by Hisense. Hisense does not bear responsibility for any faults that may arise due to non-conformation to this guide. Example:

- Do not, in any way, cause a short-circuit. It may start a fire or the phone may explode causing injury.
- Do not create a sudden impact on the battery by throwing it.
- Do not dispose off batteries by putting them in a fire. They may explode or catch fire due to the electrolyte within.

Caution

- Do not use the phone with a car battery.
- Avoid using the phone in high temperature or humidity. Avoid spilling any liquid on this phone. If the phone gets wet, Switch off phone and turn off AC power supply.
- Keep the phone dry. Submersion, humidity, and liquids contain minerals that may corrode internal electronic circuits.
- Do not store or use the phone in dusty or dirty areas as this can damage the moving parts.
- Do not store the phone in hot/ cold areas.
- Do not attempt to open it. Non-expert handling of the phone could damage it. Consult your authorized Hisense dealer for assistance.
- Do not drop, knock or shake the phone. Rough handling may break the internal circuit boards.
- Do not use harsh chemicals, cleaning solvents or strong detergents to clean the phone. Wipe it with a soft cloth that has been slightly dampened in a mild soap and water solution.

- Do not paint the phone. Paint can clog the phone's moving parts and prevent proper functioning.
- During lightning, do not touch the power plug or the phone line. It may result in an electric shock or death.
- Do not install the phone under direct sunlight or on an uneven surface.
- Before using the plug, check the available power voltage. Inaccurate power voltage may cause fire and damage.

FCC Interference Statement

The device complies with Part 15 of FCC rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference.
(2) This device must accept any interference received, including interference that may cause undesired operations.

This device has been tested and found to comply with the limits for a Class B digital device pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This device generates, uses, and can radiate radio frequency energy, and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this device does cause harmful interference to radio/television reception, which can be
determined by turning the device off and on, the user is encouraged to try to correct the
interference by one or more of the following measures:
– Reorient or relocate the receiving antenna.
– Increase the separation between the equipment and the receiver.
– Connect the equipment into an outlet on a circuit different from that to which the
receiver is connected.
– Consult the dealer or an experienced radio/TV technician for help.

Warning:

Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

SAR Information

• This device complies with Part 22 of the FCC Rules.

• This device meets government requirements for exposure to radio waves. This device is a radio transmitter and receiver. It is designed and manufactured not to exceed limits for exposure to radio frequency (RF) energy. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the population. The guidelines were developed and confirmed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The limits include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for device employs a unit of measurement known as the Specific Absorption Rate, or SAR. Under the guidelines for your device, the SAR limit is 1.6 W/kg .The highest SAR value for this device when tested for use at the head is 0.976 W/kg and when worn on the body is 0.667 W/kg.

NOTE: For body worn operation, this phone has been tested and meets the FCC RF exposure guidelines when used with an accessory that contains no metal and that positions the handset a minimum of 1.5 cm from the body. Use of other accessories may not ensure compliance with FCC RF exposure guidelines.

The FCC has granted an Equipment Authorization for this device with all reported SAR levels evaluated as in

compliance with the FCC RF exposure guidelines. SAR information on this device is on file with the FCC and can be found under the Display Grant section of http://www.fcc.gov/oet/fccid after searching on FCC ID: SARHISENSEEG59.

FCC Radiation Exposure Statement (For 2.4GHz Bluetooth):

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. End users must follow the specific operating instructions for satisfying RF exposure compliance.
This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Contents

2. Date and time
You can set to Display the time and date.

Installing the Battery

Align the golden connectors on the battery with the corresponding connector on the phone and push the opposite end of the battery until it snaps into the place.
Note:
Your phone is designed to be used only with Original batteries and chargers. Use of other batteries or charger may cause damage to your phone and the warranty will be void.

3

Removing the Battery

Make sure your phone is powered off or you will loose any unsaved information.

Button up the middle of the bottom battery and pull it out.

Inserting card

Before installing the card, always make sure the phone is switched off and then remove the battery.
Your phone must work with an active card provided by your service provider.

1. Slide the SIM card carefully into the SIM card slot.
2. Make sure that the golden connectors on the card are facing downwards and the beveled corner is on the right. Insert the battery and casing.(make sure the UIM card on the bottom)

Note:
If no card is inserted or your card is damaged, then your phone's LCD will display "Insert card" when it's powered on.
If your card is PIN-locked, your phone will display "unlock PIN". You must enter PIN before the phone can start operations. Please contact your network service provider.
When inserting card, please keep it away from possible damage caused by static, scratch or bend, and put it where is not available for children.

4

Charging the Battery

New batteries are shipped partially charged. Before you
can use your phone, you need to charge the battery, as
indicated by the following instructions. Some batteries
perform best after several full charge/discharge cycles.
Plug the travel charger into your phone's connector port
with the arrow facing up.
Plug the other end of the travel charger into the appropriate
electrical outlet (100~230VAC).
When your phone indicates that the battery is fully charged,
press the release tab and remove the travel charger.

Note:
Before charge, make sure the battery is installed in the
phone.
The battery can discharge gradually even when your
phone is powered off. If the battery is drained for a long
time, the information stored in the phone could possibly be
lost.
If this makes no effect, stop charge and send the charger
for repair.
If the battery's charge is extremely low, the LCD may not
light even when charge has begun. After a period of charge
then the LCD can light.

Battery Level Indicator

Your Phone is equipped with a Lithium Ion (Li-Ion) battery
which can be recharged before completely drained.
Battery Level Indicator changes according to the battery's
charge volume as below:

Full charge

Partial charge

Low charge

Extremely low charge

If the charge continues to get low, the Indicator begins flashing. When the charge becomes drained, your phone gives an alert and the message of "Low battery" is displayed on the screen. Several minutes later your phone will alert again and then turn off automatically.

Battery performance

Local network conditions, phone's settings, game and music playing, data services and frequent operations can affect battery's standby time.
The battery performance is also affected by charge state, temperature.

	1400mAh (standard battery)
Standby time*	About 100 hours
Talking time*	About 200 minutes

6

Basic functions

Turning Your Phone On and Off

1. Press and hold Power (RED Phone icon) key for more than 2 seconds to turn on your phone.
2. If "Pin Code Check" is set on, the phone will prompt you to enter the PIN number. If only you input proper PIN number, the phone can enter idle display.

CDMA2000 1x
High-speed Data Service

This mobile phone supports CDMA 1x High-speed data service. Connecting the phone to the PC by dedicated data line, Users can surf in internet anytime and anywhere.

Operation step :

First, connect the dedicated data line. The USB end is connected to PC and another end is connected to mobile phone, then confirm this connection is successful.

After connection, PC will find this hardware device and search the driver for installing. Notice: because USB interface is used, users need the specific USB driver, which is needed to buy with the data line.

Open the "control panel" of PC, and select "phone and modem", from which users can see "Hisense USB CDC Modem" has been set up successfully which denotes the connection is success.

Open the "control panel" of PC, and select "network and dial" and then select "network connection" to create the new connection. (setting mode is different according to the operation system).

Requirement : Depending on Service Provider (Please refer to your service provider)

Dial #777

User: card

Password: card

Dial up the highest speed is 153.6kbps. The data speed is different according to the local network.

Notice:

Because a big amount of users are centralized in one cell, the dial connection will be effected, please try more.
During connection, because the change of the wireless environment, the connection perhaps interrupted, please connect again.
After interrupt, please confirm the setting of the phone to the "PC connection" state.
In some specific instance, if the mobile phone can not be connected to PC, please reboot PC or phone.
The user name and password perhaps be different according to the local network, please refer to the local operator for details.
