

The Description of No software version on MW506

The MW506 wireless module is a highly integrated single-chip that support 1-stream 802.11ac solutions with 1x1 SISO (Multiple-Input, Multiple-Output) with Wireless LAN (WLAN) USB2.0 network interface controller. It combines a WLAN MAC, a 1T1R capable WLAN baseband, and RF in s single chip. The MW506 wireless module provides a complete solution for a high-performance integrated wireless device. Which is designed for communicating with intelligent terminal products like TV etc. It just transfers the data from model to intelligent terminal by USB2.0 and some control signals as the transmission function module only. The software development is all in the TV terminal, and the WiFi module only has data transmission function, so the module itself has no software version, and the working mechanism is similar to the camera module of mobile phone products.

That's stated above all.
