UNII DeclarationLetter

We have declared below featured for FCC equipment authorization, device FCC ID: SARMWH515S

(1) DFSDevice-- ☐ Master, ☐ ClientwithRadardetectioncapability,
☒ Client without radar detectioncapability, ☐ N/A

(2) Active / Passive Scanning , adhoc mode access pointcapability

FrequencyBand (MHz)	Active Scanning (the device can transmit aprobe (beacon))		passivescanning (where thedevice is can listenonly withnoprobes)		Ad HocMode capability		Accesspoint capability

(3) Country code selection ability- ☒Yes, ☐No
If no, pls explain how was implemented : use Microsoft networkutility

(4) Meet 15.202 requirement- ☒ Yes, ☐ No ,
pls check below:
☐ A master device is defined as a device operating in a mode in which it has the capabilityto transmit without receiving an enabling signal. In this mode it is able to select a channel and initiatea network by sending enabling signals to otherdevices
☒ A client device is defined as a device operating in a mode in which the transmissions of thedevice are under control of the master. A device in client mode is not able to initiate anetwork.

(5) For client devices that have software configuration control to operate in different modes(active scanning in some and passive scanning in others) in different bands (devices with multipleequipment classes or those that operate on non-DFS frequencies) or modular devices which configure themodes of operations through software, the application must provide software and operations descriptionon how the software and / or hardware is implemented to ensure that proper operations modes cannot be modified by end user or aninstaller.
