

The Description of No software version on MWH617S

Hisense MWH617S wireless model is a highly integrated single-chip that support 2-stream 802.11ax solutions with Multi-user MIMO (Multiple-Input, Multiple-Output) with Wireless LAN (WLAN) USB3.0 network interface controller, also support Bluetooth specification 2.1+EDR 、 Bluetooth 4.2 Low Energy and Bluetooth 5.2, which is designed for communicating with intelligent terminal products like TV etc. It just transfers the data from model to intelligent terminal by USB3.0 and some control signals as the transmission function module only. The software development is all in the TV terminal, and the WiFi module only has data transmission function, so the module itself has no software version, and the working mechanism is similar to the camera module of mobile phone products.

That's stated above all.
