Re: Class 2 Permissive Change Application(FCC)  
Original Filing (Industry Canada)

Grantee: Sonos Inc.  
FCC ID: SBVRM000  
IC: 5373A-RM000  
Date of Original FCC Grant: 30 August 2006  
Modular Certification

Description: Mini PCI 802.11b/g transceiver

Hello,

On behalf of my client Sonos Inc. application for certification of the referenced Sonos device have been filed for FCC and Industry Canada compliance.

The FCC filing is a class 2 permissive change for the referenced FCC ID. The Industry Canada application is an original filing for a modular approval.

There have been no changes to the hardware, testing was performed to qualify the module with three different Sonos designed antennas:

CR100, 4.5dBi gain      ZP80, 2.5dBi gain      ZP100, 1.5dBi antenna

Test reports have been submitted for three different Sonos products. This was done because the Sonos antennas are located internally. The test reports reference FCC and IC certification numbers that were previously issued to Sonos. Although Sonos will use the identical cases, antennas, power supplies, and non-radio electronics, Sonos will not use the previous FCC IDs, rather, there will be an internal ID label on the module and an external label on the ZP and CR products that says

“Contains FCC ID: SBVRM000 IC: 5373A-RM000”

If you have questions or need further information please contact the undersigned.

Sincerely,

THOMAS N COKENIAS  
Agent for Sonos Inc.
